

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the fiscal year ended January 25, 2026

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

Commission file number: 0-23985

NVIDIA CORPORATION

(Exact name of registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

94-3177549
(I.R.S. Employer
Identification No.)

2788 San Tomas Expressway, Santa Clara, California
(Address of principal executive offices)

95051
(Zip Code)

Registrant's telephone number, including area code: (408) 486-2000

Securities registered pursuant to Section 12(b) of the Act:

Trading Symbol(s)

NVDA

Name of each exchange on which registered

The Nasdaq Global Select Market

Title of each class

Common Stock, \$0.001 par value per share

Securities registered pursuant to Section 12(g) of the Act:
None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company Emerging growth company

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report.

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements.

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240.10D-1(b).

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the voting stock held by non-affiliates of the registrant as of July 25, 2025 was approximately \$4.0 trillion (based on the closing sales price of the registrant's common stock as reported by the Nasdaq Global Select Market on July 25, 2025). This calculation excludes 1.0 billion shares held by directors and executive officers of the registrant. This calculation does not exclude shares held by such organizations whose ownership exceeds 5% of the registrant's outstanding common stock that have represented to the registrant that they are registered investment advisers or investment companies registered under section 8 of the Investment Company Act of 1940.

The number of shares of common stock outstanding as of February 20, 2026 was 24.3 billion.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's Proxy Statement for its 2026 Annual Meeting of Shareholders to be filed with the Securities and Exchange Commission pursuant to Regulation 14A not later than 120 days after the end of the fiscal year covered by this Annual Report on Form 10-K are incorporated by reference into Part III, Items 10-14 of this Annual Report on Form 10-K.

Where You Can Find More Information

Investors and others should note that we announce material financial information to our investors using our investor relations website, press releases, SEC filings and public conference calls and webcasts. We also use the following social media channels as a means of disclosing information about the company, our products, our planned financial and other announcements and attendance at upcoming investor and industry conferences, and other matters and for complying with our disclosure obligations under Regulation FD:

NVIDIA Corporate Blog (blogs.nvidia.com/)
NVIDIA Technical Blog (developer.nvidia.com/blog/)
NVIDIA LinkedIn (linkedin.com/company/nvidia)
NVIDIA Facebook (facebook.com/nvidia)
NVIDIA Instagram (instagram.com/nvidia)
NVIDIA X (x.com/nvidia)
NVIDIA Threads (threads.com/@nvidia)
NVIDIA Investor Relations (investor.nvidia.com)
NVIDIA YouTube (YouTube.com/nvidia).

The information we post through these social media channels may be deemed material. Accordingly, investors should monitor these channels, in addition to following our press releases, SEC filings and public conference calls and webcasts. This list may be updated from time to time. The information we post through these channels is not a part of this Annual Report on Form 10-K.

Forward-Looking Statements

This Annual Report on Form 10-K contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are subject to the “safe harbor” created by those sections based on management’s beliefs and assumptions and on information currently available to our management. In some cases, you can identify forward-looking statements by terms such as “may,” “will,” “should,” “could,” “goal,” “would,” “expect,” “plan,” “anticipate,” “believe,” “estimate,” “project,” “predict,” “potential,” and similar expressions intended to identify forward-looking statements. These statements involve known and unknown risks, uncertainties and other factors, which may cause our actual results, performance, time frames or achievements to be materially different from any future results, performance, time frames or achievements expressed or implied by the forward-looking statements. We discuss many of these risks, uncertainties, and other factors in this Annual Report on Form 10-K in greater detail under the heading “Risk Factors.” Given these risks, uncertainties, and other factors, you should not place undue reliance on these forward-looking statements. Also, these forward-looking statements represent our estimates and assumptions only as of the date of this filing. You should read this Annual Report on Form 10-K completely and understand that our actual future results may be materially different from what we expect. We hereby qualify our forward-looking statements by these cautionary statements. Except as required by law, we assume no obligation to update these forward-looking statements publicly, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.

All references to “NVIDIA,” “we,” “us,” “our,” or the “Company” mean NVIDIA Corporation and its subsidiaries.

In addition, statements that “we believe” and similar statements reflect our beliefs and opinions on the relevant subject. These statements are based upon information available to us as of the filing date of this Annual Report on Form 10-K, and while we believe such information forms a reasonable basis for such statements, such information may be limited or incomplete, and our statements should not be read to indicate that we have conducted an exhaustive inquiry into, or review of, all potentially available relevant information. These statements are inherently uncertain, and investors are cautioned not to unduly rely upon these statements.

Part I

Item 1. Business

Our Company

NVIDIA pioneered accelerated computing to help solve the most challenging computational problems. NVIDIA is now a data center scale AI infrastructure company reshaping all industries.

Our technology stack includes the foundational NVIDIA CUDA development platform that runs on all NVIDIA GPUs, as well as hundreds of domain-specific software libraries, frameworks, algorithms, software development kits, or SDKs, and application programming interfaces, or APIs. This deep and broad software stack accelerates the performance and facilitates the deployment of NVIDIA accelerated computing for computationally intensive workloads such as artificial intelligence, or AI, model training and inference, data analytics, scientific computing, robotics, and 3D graphics, with vertical-specific optimizations to address industries ranging from healthcare and telecom to automotive and manufacturing.

Introduced with the Blackwell architecture, our data-center-scale offerings feature extreme co-design where the infrastructure's chips, networking, systems, software, and algorithms are holistically architected and optimized to maximize performance and scale. Hundreds of thousands of GPUs can be interconnected to function as a single giant computer. This type of data center architecture and scale is needed for the development and deployment of modern AI and accelerated computing applications.

The GPU was initially used to simulate human imagination, enabling the virtual worlds of video games and films. Today, it also simulates human intelligence, enabling a deeper understanding of language, science, and the physical world. Its parallel processing capabilities, supported by tens of thousands of computing cores, are essential for deep learning algorithms. This form of AI, in which software writes itself by learning from large amounts of data, can serve as the brain of computers, robots, and self-driving cars that can perceive, understand and reason about the world. GPU-powered AI solutions are being developed by thousands of enterprises to deliver services and products that would have been immensely difficult or even impossible with traditional coding. Examples include generative AI, which can create new content such as text, code, images, audio, video, molecule structures, and recommendation systems; and agentic AI where systems of AI models work in concert to automatically complete a task.

NVIDIA has a platform strategy, bringing together hardware, systems, software, algorithms, libraries, AI models and training data sets, and services to create unique value for the markets we serve. While the computing requirements of these end markets are diverse, we address them with a unified underlying programmable architecture allowing us to support several multi-billion-dollar end markets with the same underlying technology by using a variety of software stacks developed either internally or by third-party developers and partners. The large and growing number of developers and installed base across our platforms strengthens our ecosystem and increases the value of our platform for our customers.

Innovation is at our core. We have invested over \$76.7 billion in research and development since our inception, yielding inventions that are essential to modern computing. Our invention of the GPU in 1999 sparked the growth of the PC gaming market and redefined computer graphics. With our introduction of CUDA in 2006, we opened the parallel processing capabilities of our GPU to a broad range of compute-intensive applications, paving the way for the emergence of modern AI. In 2012, the AlexNet neural network, trained on NVIDIA GPUs, won the ImageNet computer image recognition competition, marking the "Big Bang" moment of AI. We introduced our first Tensor Core GPU in 2017, built from the ground-up for the new era of AI, and our first autonomous driving system-on-chips, or SoC, in 2018. Our acquisition of Mellanox in 2020 expanded our offerings to include networking, enabled our platforms to be data center scale, and led to the introduction of a new processor class – the data processing unit, or DPU. Over the past 5 years, we have built full software stacks that run on top of our GPUs and CUDA to bring AI to the world's largest industries, including NVIDIA DRIVE stack for autonomous driving, Clara for healthcare, Omniverse for physical AI applications, and NVIDIA AI Enterprise software – essentially an operating system for enterprise AI applications. In 2023, we introduced our first data center CPU, Grace, built for giant-scale AI and high-performance computing, or HPC. In 2024, we launched the NVIDIA Blackwell architecture – connecting 36 Grace CPUs and 72 Blackwell GPUs in a data center scale, liquid-cooled design – for real-time trillion-parameter inference and training. In fiscal year 2026, we launched and scaled the NVIDIA Blackwell Ultra platform, optimized for agentic, reasoning, and physical AI. Building on the architectural breakthroughs of Blackwell and leveraging Dynamo inference software, it delivers a significant increase in token throughput and reduction in cost per token compared to the Hopper generation. More recently, in support of market development, we have accelerated the release cadence of our open AI model platforms including NVIDIA Nemotron for agentic AI and Cosmos for physical AI. With a strong engineering culture, we drive fast, yet harmonized, product and technology innovations in all dimensions of computing including silicon, systems, networking, software and algorithms. More than half of our engineers work on software.

All major cloud service providers, or CSPs, AI model makers, and enterprises use our data center-scale infrastructure and computing platforms to accelerate the services and offerings they deliver to billions of end users and customers, including AI solutions and assistants, AI foundation models, advertising, search, recommendation systems, social

networking, data processing, online shopping, live video, and translation. AI model makers use our infrastructure and software hosted at CSPs to develop, build and run AI models, product offerings, and services.

Enterprises and startups across a broad range of industries use our accelerated computing platforms to build new generative and agentic AI-enabled products and services, and/or to dramatically accelerate and reduce the costs of their workloads and workflows. The enterprise software industry uses them for new AI assistants, chatbots, and agents; the transportation industry for autonomous driving; the healthcare industry for accelerated and computer-aided drug discovery; and the financial services industry for customer support and fraud detection.

Researchers and developers use our computing solutions to accelerate a wide range of important applications, from simulating molecular dynamics to climate forecasting. With support for 6,000 applications, NVIDIA computing enables some of the most promising areas of discovery, from climate prediction to materials science and from wind tunnel simulation to genomics. Including GPUs and networking, NVIDIA powers over 78% of the supercomputers on the global TOP500 list, including 9 of the top 10 systems on the Green500 list.

Gamers choose NVIDIA GPUs to enjoy immersive, increasingly cinematic virtual worlds. In addition to serving the growing number of gamers, the market for PC GPUs is expanding because of the growing population of live streamers, broadcasters, artists, and creators. With the advent of generative and agentic AI, we expect a broader set of PC users to choose NVIDIA GPUs for running these applications locally on their PC, which is critical for privacy, latency, and cost-sensitive AI applications.

Professional artists, architects and designers use NVIDIA partner products accelerated with our GPUs and software platform for a range of creative, engineering, and design use cases, such as creating visual effects in movies or designing buildings and products. In addition, generative and agentic AI is expanding the market for our workstation-class GPUs, as more enterprise customers develop and deploy AI applications with their data on-premises.

Headquartered in Santa Clara, California, NVIDIA was incorporated in California in April 1993 and reincorporated in Delaware in April 1998.

Our Businesses

We report our business results in two segments.

The Compute & Networking segment includes our Data Center accelerated computing and networking platforms and AI solutions and software, and Automotive platforms and autonomous and electric vehicle solutions including software.

The Graphics segment includes GeForce GPUs for gaming and PCs, and Quadro/NVIDIA RTX GPUs for enterprise workstation graphics.

Our Markets

We specialize in markets where our computing and AI infrastructure platforms can provide tremendous acceleration for applications. These platforms incorporate processors, interconnects, software, algorithms, systems, and services to deliver unique value. Our platforms address four large markets where our expertise is critical: Data Center, Gaming, Professional Visualization, and Automotive.

Data Center

The NVIDIA Data Center platform is focused on accelerating compute-intensive workloads, such as AI, data processing, graphics, robotics, and scientific computing, delivering superior total cost of ownership relative to conventional CPU-only approaches. It is deployed in cloud, hyperscale, on-premises and edge data centers. The platform consists of data center compute and networking infrastructure offerings typically delivered to customers as rack-scale systems, subsystems, or modules, along with software and services.

Our Data Center infrastructure systems include supercomputing platforms and servers, bringing together our higher performance, energy efficient GPUs, CPUs, interconnects, and fully optimized AI and HPC software stacks. In addition, they include a growing body of acceleration libraries, AI models and training data sets, APIs, SDKs, and domain-specific application frameworks.

Our networking offerings include NVLink interconnects and switches, end-to-end platforms for InfiniBand and Ethernet, consisting of network adapters, cables, DPUs, switch chips and systems, as well as software. This has enabled us to architect data center-scale computing platforms that can interconnect up to hundreds of thousands of compute nodes with high-performance networking. Fueled by an expansion in AI and HPC workloads, the data center has become the new unit of computing, with networking as an integral part. In fiscal year 2026, we introduced NVIDIA NVLink Fusion to enable hyperscalers and custom ASIC designers to integrate custom CPUs and XPUs with our platform.

Our customers include all major public and private cloud providers, AI model makers, enterprises and startups, and public sector entities. We work with industry leaders to help build or transform their applications and data center infrastructure. Some of our direct customers include original equipment manufacturers, or OEMs, original device manufacturers, or

ODMs, system integrators and distributors which we partner with to help bring our products to market. We also have partnerships in automotive, healthcare, financial services, manufacturing, retail, and technology among others, to accelerate the adoption of AI.

At the foundation of the NVIDIA accelerated computing platform are our GPUs, which excel at parallel workloads such as the training and inferencing of neural networks. These Data Center systems are extreme co-designed with the GPU, CPU, NVLink switch, DPU, NIC, and scale-out networking along with software stacks and algorithms to deliver data center-scale computing solutions.

While our approach starts with powerful chips, what makes it a full-stack computing platform is our large body of software, including the CUDA development platform, the CUDA-X collection of acceleration libraries, AI models and training data sets, APIs, SDKs, and domain-specific application frameworks.

In addition to software delivered to customers as an integral part of our data center computing and networking platform, we offer paid licenses to NVIDIA AI Enterprise, a comprehensive suite of enterprise-grade AI software and NVIDIA vGPU software for graphics-rich virtual desktops and workstations.

In fiscal year 2025, we launched the NVIDIA Blackwell architecture, a full set of data center scale infrastructure that includes GPUs, CPUs, DPUs, interconnects, switch chips and systems, and networking adapters. Blackwell excels at processing cutting edge generative AI and accelerated computing workloads with market leading performance and efficiency. Offered in a number of configurations, for customers across industries and a diverse set of AI and accelerated computing use cases. In fiscal year 2026, we unveiled the NVIDIA Rubin platform, which is expected to commence production shipments in the second half of fiscal year 2027. Built for agentic AI and reasoning, it excels at processing multi-step problem-solving and massive long-context workflows, delivering up to a 10x reduction in cost per token compared to Blackwell.

For physical AI, we provide an end-to-end platform spanning data center infrastructure, open models, systems, embedded compute modules, and software stacks to train, simulate, and deploy advanced automation and robotics solutions.

Gaming

Gaming is the largest entertainment industry, with PC gaming as the predominant platform. Many factors propel its growth, including new high production value games, the continued rise of eSports, social connectivity and the increasing popularity of game streamers, modders, or gamers who remaster games, and creators.

Our products for the gaming market include GeForce RTX GPUs for gaming desktop and laptop PCs, GeForce NOW cloud gaming service, as well as SoCs and development services for game consoles.

Our gaming platforms leverage our GPUs and sophisticated software to enhance the gaming experience with smoother, higher quality graphics. NVIDIA RTX features ray tracing technology for real-time, cinematic-quality rendering, and deep learning super sampling, or NVIDIA DLSS, our AI technology that boosts frame rates while generating high-quality images for games. RTX GPUs also feature NVIDIA tensor core technology making them well suited to accelerate a new generation of on-device AI applications.

In fiscal year 2025, we announced the NVIDIA Blackwell GeForce RTX 50 Series family of desktop and laptop GPUs. The Blackwell architecture introduced neural graphics which combines AI models with traditional rendering to boost game performance, image quality, and interactivity, as well as the next generation of our DLSS technology powered by a new transformer model architecture. In fiscal year 2026, we launched and scaled Blackwell architecture for gaming and GeForce NOW.

Professional Visualization

We serve the Professional Visualization market by working closely with independent software vendors, or ISVs, to optimize their offerings for NVIDIA GPUs. Our GPU computing platform enhances productivity and introduces new capabilities for critical workflows in many fields, such as design, engineering, and digital content creation across a wide range of industry verticals. Additionally, the increasing number of generative and agentic AI applications is giving rise to the need for the enhanced AI and data processing capabilities of our RTX PRO GPUs.

Many leading 3D design and content creation applications developed by our ecosystem partners support RTX, allowing professionals to accelerate and transform their workflows with NVIDIA RTX PRO GPUs and software. As these applications increasingly integrate AI, these GPUs are used and leverage the same Tensor Core technology found in our Data Center solutions.

Automotive

Automotive is comprised of platform solutions for automated driving from the cloud to the car. Leveraging our technology leadership in AI and building on long-standing relationships across several hundred automotive ecosystem partners, we are delivering a full stack end-to-end solution for the AV market under the DRIVE Hyperion platform. This platform consists of development infrastructure, high-performance, energy efficient DRIVE AGX computing hardware

running an in-vehicle operating system (DRIVE OS), a reference sensor set that supports full self-driving capability as well as an open, modular DRIVE software platform for autonomous driving, mapping, and parking services, and intelligent in-vehicle experiences.

Business Strategies

NVIDIA's key strategies that shape our overall business approach include:

Advancing the NVIDIA accelerated computing platform. Our accelerated computing platform can solve complex problems in significantly less time and with lower power consumption than alternative computational approaches. It can help solve problems that were previously deemed unsolvable. We work to deliver continued performance leaps that outpace Moore's Law by leveraging innovation across the architecture, chip design, system, interconnect, algorithm, and software layers. This full-stack innovation approach allows us to deliver order-of-magnitude performance advantages relative to legacy approaches in our target markets, which include Data Center, Gaming, Professional Visualization, and Automotive. While the computing requirements of these end markets are diverse, we address them with a unified underlying architecture leveraging our GPUs, CPUs, CUDA and networking technologies as the fundamental building blocks. The programmable nature of our architecture allows us to make leveraged investments in research and development: we can support several multi-billion-dollar end markets with shared underlying technology by using a variety of software stacks developed either internally or by third-party developers and partners. We utilize this platform approach in each of our target markets.

Extending our technology and platform leadership in AI. We provide a complete, end-to-end accelerated computing platform for AI, addressing both training and inferencing. This includes full-stack data center-scale compute and networking solutions across processing units, interconnects, systems, and software. Our compute solutions include all three major processing units in AI servers – GPUs, CPUs, and DPUs. GPUs are uniquely suited to AI, and we will continue to add AI-specific features to our GPU architecture to further extend our leadership position.

In addition, we offer NVIDIA AI Enterprise—a comprehensive software suite designed to simplify the development and deployment of production-grade, end-to-end generative AI applications. NVIDIA AI Enterprise includes: NVIDIA NIM, which increases token throughput using industry-leading open and proprietary models; NVIDIA NeMo, a complete solution for curating, fine-tuning, reinforcement learning, evaluating, and safeguarding domain-adapted models; and AI Blueprints, pre-built, runnable templates that help enterprises build, optimize, and deploy AI agents while preserving privacy. These tools enable organizations to securely develop and run AI applications on NVIDIA-accelerated infrastructure anywhere.

Our AI technology leadership is reinforced by our large and expanding ecosystem. Our computing platforms are available from virtually every major server maker and CSP, as well as on our own AI supercomputers. There are over 7.5 million developers worldwide using CUDA and our other software tools to help deploy our technology in our target markets. We are the leader in accelerating and releasing open AI models which enterprises, sovereigns, and startups can leverage to develop and run applications on our platform. We evangelize AI through partnerships with hundreds of universities and tens of thousands of startups through our Inception program. Additionally, our Deep Learning Institute provides instruction on the latest techniques on how to design, train, and deploy neural networks in applications using our accelerated computing platform.

Extending our technology and platform leadership in computer graphics. We believe that computer graphics infused with AI is fundamental to the continued expansion and evolution of computing. We apply our research and development resources to enhance the user experience for consumer entertainment and professional visualization applications and create new virtual world and simulation capabilities. Our technologies are instrumental in driving the gaming, design, and creative industries forward, as developers leverage our libraries and algorithms to deliver an optimized experience on our GeForce and NVIDIA RTX platforms. Our computer graphics platforms leverage AI end-to-end, from the developer tools and cloud services to the Tensor Cores included in all RTX-class GPUs. Blackwell GPUs' advanced AI and neural rendering capabilities combined with NVIDIA's world-class AI software stacks significantly accelerate AI workloads running locally on PCs. Omniverse is real-time 3D design collaboration and virtual world simulation software that empowers artists, designers, and creators to connect and collaborate in leading design applications.

Advancing the leading autonomous vehicle platform. We believe the advent of autonomous vehicles, or AV, and electric vehicles, or EV, is revolutionizing the transportation industry. The algorithms required for autonomous driving - such as reasoning, perception, localization, and planning - are too complex for legacy hand-coded approaches and will use multiple neural networks instead. Therefore, we provide an AI-based hardware and software solution, designed and implemented from the ground up based on automotive safety standards, for the AV and EV market under the DRIVE brand, which we are bringing to market through our partnerships across the transportation industry including with automotive OEMs, mobility service providers, robotaxis, tier-1 suppliers, and start-ups. Our AV solution also includes the GPU-based hardware required to train the neural networks before their in-vehicle deployment, as well as to re-simulate their operation prior to any over-the-air software updates. We believe our comprehensive, top-to-bottom and end-to-end approach will enable the transportation industry to solve the complex problems arising from the shift to autonomous driving.

Leveraging our intellectual property, or IP. We believe our IP is a valuable asset that can be accessed by our customers and partners through license and development agreements when they desire to build such capabilities directly into their own products or have us do so through a custom development. Such license and development arrangements can further enhance the reach of our technology.

Sales and Marketing

Our worldwide sales and marketing strategy is key to achieving our objective of providing markets with our high-performance and efficient computing platforms and software. Our sales and marketing teams, located across our global markets, work closely with customers and various industry ecosystems through our partner network. Our partner network incorporates global, regional and specialized CSPs, OEMs, ODMs, ISVs, global system integrators, add-in board manufacturers, or AIBs, distributors, automotive manufacturers and tier-1 automotive suppliers, and other ecosystem participants.

Members of our sales team have technical expertise and product and industry knowledge. We also employ a team of application engineers and solution architects to provide pre-sales assistance to our partner network in designing, testing, and qualifying system designs that incorporate our platforms. For example, our solution architects work with CSPs to provide pre-sales assistance to enable our customers to optimize their hardware and software infrastructure for generative and agentic AI and LLM training and deployment. They also work with foundation model and enterprise software developers to enable our customers to optimize the training and fine-tuning of their models and services, and with enterprise end-users, often in collaboration with their global system integrator of choice, to fine-tune models and build AI applications. We believe that the depth and quality of our design support are key to improving our partner network's time-to-market, maintaining a high level of customer satisfaction, and fostering relationships that encourage our customers and partner network to use the next generation of our products within each platform.

To encourage the development of applications optimized for our platforms and software, we seek to establish and maintain strong relationships in the software development community. Engineering and marketing personnel engage with key software developers to promote and discuss our platforms, as well as to ascertain individual product requirements and solve technical problems. Our developer program supports the development of AI frameworks, SDKs, and APIs for software applications and game titles that are optimized for our platforms. Our Deep Learning Institute provides in-person and online training for developers in industries and organizations around the world to build AI and accelerated computing applications that leverage our platforms.

Seasonality

Our computing platforms serve a diverse set of markets such as data centers, gaming, professional visualization, and automotive. Our desktop gaming products typically see stronger revenue in the second half of our fiscal year. Historical seasonality trends may not repeat.

Manufacturing

We utilize a fabless and contracting manufacturing strategy, whereby we employ and partner with key suppliers for all phases of the manufacturing process, including wafer fabrication, assembly, testing, and packaging. We use the expertise of industry-leading suppliers that are certified by the International Organization for Standardization in such areas as fabrication, assembly, quality control and assurance, reliability, and testing. Additionally, we can avoid many of the significant costs and risks associated with owning and operating manufacturing operations. While we may directly procure certain raw materials used in the production of our products, such as memory, substrates, and a variety of components, our suppliers are responsible for procurement of most raw materials used in the production of our products. As a result, we can focus our resources on product design, quality assurance, marketing, and customer support. In periods of growth, we may place non-cancellable inventory orders for certain product components in advance of our historical lead times, pay premiums, or provide deposits to secure future supply and capacity and may need to continue to do so.

We have expanded our supplier relationships to build redundancy and resilience in our operations to provide long-term manufacturing capacity aligned with growing customer demand. While currently our supply chain is mainly concentrated in Asia, we are expanding into the U.S. and Latin America. We utilize foundries, such as Taiwan Semiconductor Manufacturing Company Limited, or TSMC, and Samsung Electronics Co., Ltd., or Samsung, to produce our semiconductor wafers. We purchase memory from SK Hynix Inc., Micron Technology, Inc., and Samsung. We utilize CoWoS technology for semiconductor packaging. We engage with independent subcontractors and contract manufacturers such as Hon Hai Precision Industry Co., Ltd., Wistron Corporation, and Fabrinet to perform assembly, testing and packaging of our final products.

Competition

The market for our products is intensely competitive and is characterized by rapid technological change and evolving industry standards. We believe that the principal competitive factors in this market are performance, breadth of product offerings, access to customers and partners and distribution channels, software support, conformity to industry standard APIs, manufacturing capabilities, processor pricing, and total system costs. We believe that our ability to remain competitive will depend on how well we are able to anticipate the features and functions that customers and partners will

demand and whether we are able to deliver consistent volumes of our products at acceptable levels of quality and at competitive prices. We expect competition to increase from both existing competitors and new market entrants with products that may be lower priced than ours or may provide better performance or additional features not provided by our products. In addition, it is possible that new competitors or alliances among competitors could emerge and acquire significant market share.

A significant source of competition comes from companies that provide or intend to provide GPUs, CPUs, DPUs, embedded SoCs, and other accelerated, AI computing processor products, and providers of semiconductor-based high-performance interconnect products based on InfiniBand, Ethernet, Fibre Channel, and proprietary technologies. Some of our competitors may have greater marketing, financial, distribution and manufacturing resources than we do and may be more able to adapt to customers or technological changes. We expect an increasingly competitive environment in the future.

Our current competitors include:

- suppliers and licensors of hardware and software for discrete and integrated GPUs, custom chips and other accelerated computing solutions, including solutions offered for AI, such as Advanced Micro Devices, Inc., or AMD, Huawei Technologies Co. Ltd., or Huawei, and Intel Corporation, or Intel;
- large cloud services companies with internal teams designing hardware and software that incorporate accelerated or AI computing functionality as part of their internal solutions or platforms, such as Alibaba Group, Alphabet Inc., Amazon, Inc., or Amazon, Baidu, Inc., Huawei, and Microsoft Corporation, or Microsoft;
- suppliers of Arm-based CPUs and companies that incorporate hardware and software for CPUs as part of their internal solutions or platforms, such as Amazon, Huawei, and Microsoft;
- suppliers of hardware and software for SoC products that are used in servers or embedded into automobiles, autonomous machines, and gaming devices, such as Ambarella, Inc., AMD, Broadcom, Intel, Qualcomm Incorporated, Renesas Electronics Corporation, and Samsung, or companies with internal teams designing SoC products for their own products and services, such as Tesla, Inc.; and
- networking products consisting of switches, network adapters (including DPUs), and cable solutions (including optical modules) include such as AMD, Arista Networks, Broadcom, Cisco Systems, Inc., Hewlett Packard Enterprise Company, Huawei, Intel, Lumentum Holdings Inc., and Marvell Technology, Inc, as well as internal teams of system vendors and large cloud services companies.

Patents and Proprietary Rights

We rely primarily on a combination of patents, trademarks, trade secrets, employee and third-party nondisclosure agreements, and licensing arrangements to protect our IP in the United States and internationally. Our currently issued patents have expiration dates from March 2026 to June 2045. We have numerous patents issued, allowed, and pending in the United States and in foreign jurisdictions. Our patents and pending patent applications primarily relate to our products and the technology used in connection with our products. We also rely on international treaties, organizations, and foreign laws to protect our IP. The laws of certain foreign countries in which our products are or may be manufactured or sold, including various countries in Asia, may not protect our products or IP rights to the same extent as the laws of the United States. This decreased protection makes the possibility of piracy of our technology and products more likely. We continuously assess whether and where to seek formal protection for innovations and technologies based on such factors as:

- the location in which our products are manufactured;
- our strategic technology or product directions in different countries;
- the degree to which IP laws exist and are meaningfully enforced in different jurisdictions; and
- the commercial significance of our operations and our competitors' operations in particular countries and regions.

We have licensed technology from third parties and expect to continue entering such license agreements.

Government Regulations

Our worldwide business activities are subject to various laws, rules, and regulations of the United States as well as of foreign governments.

Over the past three years, we have been subject to a series of shifting and expanding export control restrictions, impacting our ability to serve customers outside the United States.

In August 2022, the U.S. government, or USG, announced export restrictions and export licensing requirements targeting China's semiconductor and supercomputing industries. These restrictions impacted exports of certain chips, as well as software, hardware, equipment and technology used to develop, produce and manufacture certain chips to China (including Hong Kong and Macau) and Russia, and specifically impact our A100 and H100 integrated circuits, DGX or any other systems or boards which incorporate A100 or H100 integrated circuits. In July 2023, the USG also informed us of an additional licensing requirement for a subset of A100 and H100 products destined to certain customers and other regions, including some countries in the Middle East.

In October 2023, the USG announced new and updated licensing requirements for exports to China and Country Groups D:1, D:4, and D:5 (including but not limited to Saudi Arabia, the United Arab Emirates, and Vietnam, but excluding Israel) of our products exceeding certain performance thresholds, including, but not limited to, the A100, A800, H100, H800, L4, L40, L40S RTX 4090, GB200 NVL72, and B200. The licensing requirements also apply to the export of products exceeding certain performance thresholds to a party headquartered in, or with an ultimate parent headquartered in, Country Group D5, including China.

In April 2025, the USG informed us that it requires a license for export to China (including Hong Kong and Macau) and D:5 countries, or to companies headquartered or with an ultimate parent therein, of our H20 integrated circuits and any other circuits achieving the H20's memory bandwidth, interconnect bandwidth, or combination thereof. As a result of these requirements, we incurred a \$4.5 billion charge in the first quarter of fiscal year 2026 associated with H20 for excess inventory and purchase obligations, as the demand for H20 products diminished.

In August 2025, the USG granted licenses that would allow us to ship certain H20 products to certain China-based customers. We generated approximately \$60 million in H20 revenue under those licenses. USG officials expressed an expectation that the USG will receive 15% or more of the revenue generated from licensed sales of our products, but the USG did not publish a regulation codifying such requirement.

In February 2026, the USG granted a license that would allow us to ship small amounts of H200 products to specific China-based customers. To date, we have not generated any revenue under the H200 licensing program, and do not yet know whether any imports will be allowed into China. The license requires that the H200s go through an inspection process in the United States prior to any shipment to the customer. As a result, any H200 shipped under the new licensing program will be subject to a 25% tariff upon importation into the United States.

In the event that we are able to sell licensed products into the China market, we may not be able to pass along all or any of the tariff to our customers, and may be subject to litigation, increased costs, and a harmed competitive position.

The export controls applicable to China are complex and address a variety of parameters, including the total processing performance of a chip, the "performance density" of a chip, the interconnect bandwidth of a chip, and the memory bandwidth of a chip. Under the current rules and geopolitical landscape, we are unable to create and deliver a competitive product for China's data center market that receives approval from both the USG and the Chinese government. As of the end of fiscal year 2026, we were effectively foreclosed from competing in China's data center computing/compute market, and our effective foreclosure from the China market helped our competitors build larger developer and customer ecosystems to challenge us worldwide. Unless we are able to return with a product that meets the approval of both the USG and the Chinese government, our lost opportunity and the benefit to our competitors will have a material and adverse impact on our business, operating results, and financial condition.

In addition to controls targeting D:1, D:4 and D:5 countries, the USG has also imposed worldwide export controls impacting our products, and may impose additional controls in the future.

In January 2025, the USG published the AI Diffusion IFR in the Federal Register. The IFR would have imposed a worldwide licensing requirement on our data center products, such as our H200, GB200 and GB300. The AI Diffusion IFR would have divided the world into three tiers, relegating most countries to "Tier 2" status, and would have created a complex and burdensome scheme for licensing approvals.

In May 2025, the USG announced that it would rescind the AI Diffusion IFR and implement a replacement rule. The scope, timing, and requirements of the forthcoming rule remain uncertain. The replacement rule may impose new restrictions on our products or operations and/or add license requirements that could have a material impact on our business, operating results, and financial condition. For example, in October 2025, the Senate passed the "GAIN AI Act" in the NDAA. The GAIN AI Act would restrict the Trump Administration's ability to adapt the Biden Administration's export control rules, and could also allow private U.S. persons to review and overturn licensing and foreign policy decisions made by the Trump Administration.

Our competitive position has been harmed by export controls, and our competitive position and future results will be further harmed, over the long term, if the restrictions remain in place or are expanded in geographic, customer, or product scope, if customers purchase product from competitors, if customers develop their own internal solution, if we are unable to provide contractual warranty or other extended service obligations, if the USG does not grant licenses in a timely manner or denies licenses to significant customers or if we incur significant transition costs.

The licensing process may not be resolved before significant business opportunities evaporate. Even if the USG grants any requested licenses, the licenses have already and may in the future be temporary, impose burdensome conditions regarding the installation, maintenance, and use of such products, or include financial or economic requirements that we or our customers or end users cannot or choose not to fulfill. The licensing requirements have already and may in the future benefit certain of our competitors, as the licensing process will make our pre-sale and post-sale technical support efforts more cumbersome and less certain and encourage customers in China, the Middle East, and other regions to pursue alternatives to our products, including semiconductor suppliers based in China, Europe, and Israel.

Additionally, restrictions imposed by the Chinese government on the duration of gaming activities and access to games may adversely affect our Gaming revenue, and even if we are able to participate in the China data center compute market, increased oversight of digital platform companies may adversely affect our Data Center revenue. The Chinese government has encouraged customers to purchase from our China-based competitors and discouraged customers from purchasing, importing, or using our data center products, including any China-specific product designed to comply with U.S. export controls.

While we work to enhance the resiliency and redundancy of our supply chain, which is currently concentrated in Asia, new and existing export controls or changes to existing export controls could limit alternative manufacturing locations and negatively impact our business. Refer to "Item 1A Risk Factors – Risks Related to Regulatory, Legal, Our Stock, and Other Matters" for a discussion of this potential impact.

Compliance with laws, rules, and regulations has not otherwise had a material effect upon our capital expenditures, results of operations, or competitive position and we do not currently anticipate material capital expenditures for environmental control facilities. Compliance with existing or future governmental regulations, including, but not limited to, those pertaining to IP ownership and infringement, taxes, import and export requirements and tariffs, anti-corruption, business acquisitions, foreign exchange controls and cash repatriation restrictions, data privacy requirements, competition and antitrust, advertising, employment, product regulations, cybersecurity, environmental, health and safety requirements, the responsible use of AI, climate change, cryptocurrency, and consumer laws, could further increase our costs, impact our competitive position, and otherwise may have a material adverse impact on our business, financial condition and results of operations in subsequent periods. Refer to "Item 1A Risk Factors" for a discussion of these potential impacts.

Human Capital Management

As of the end of fiscal year 2026, we had approximately 42,000 employees in 38 countries; 31,000 were engaged in research and development and 11,000 were engaged in sales, marketing, operations, and administrative positions.

To execute our business strategy successfully, we focus on recruiting, developing, and retaining top global talent.

Within our workforce, more than 80 percent have technical roles and more than half of the workforce hold an advanced degree. Our employees also help to surface top talent, with over 40 percent of our new hires in fiscal year 2026 coming from employee referrals. In fiscal year 2026, our turnover rate was 3.7 percent.

We invest in employee development through on-the-job trainings and tuition reimbursement programs.

Our compensation and benefits are designed to reward performance and align employee interests with those of our shareholders through equity participation and comprehensive health and financial wellness programs. We also utilize employee listening systems to gather feedback and maintain an inclusive culture where hiring and promotions are based on merit.

Information About Our Executive Officers

The following sets forth certain information regarding our executive officers, their ages, and positions as of February 20, 2026:

Name	Age	Position
Jen-Hsun Huang	63	President and Chief Executive Officer
Colette M. Kress	58	Executive Vice President and Chief Financial Officer
Ajay K. Puri	71	Executive Vice President, Worldwide Field Operations
Debora Shoquist	71	Executive Vice President, Operations
Timothy S. Teter	59	Executive Vice President and General Counsel

Jen-Hsun Huang co-founded NVIDIA in 1993 and has served as our President, Chief Executive Officer, and a member of the Board of Directors since our inception. From 1985 to 1993, Mr. Huang was employed at LSI Logic Corporation, a computer chip manufacturer, where he held a variety of positions including as Director of Coreware, the business unit responsible for LSI's SOC. From 1983 to 1985, Mr. Huang was a microprocessor designer for AMD, a semiconductor

company. Mr. Huang holds a B.S.E.E. degree from Oregon State University and an M.S.E.E. degree from Stanford University.

Colette M. Kress joined NVDIA in 2013 as Executive Vice President and Chief Financial Officer. Prior to NVDIA, Ms. Kress most recently served as Senior Vice President and Chief Financial Officer of the Business Technology and Operations Finance organization at Cisco Systems, Inc., a networking equipment company, since 2010. At Cisco, Ms. Kress was responsible for financial strategy, planning, reporting and business development for all business segments, engineering and operations. From 1997 to 2010 Ms. Kress held a variety of positions at Microsoft, a software company, including, beginning in 2006, Chief Financial Officer of the Server and Tools division, where Ms. Kress was responsible for financial strategy, planning, reporting and business development for the division. Prior to joining Microsoft, Ms. Kress spent eight years at Texas Instruments Incorporated, a semiconductor company, where she held a variety of finance positions. Ms. Kress holds a B.S. degree in Finance from University of Arizona and an M.B.A. degree from Southern Methodist University.

Ajay K. Puri joined NVDIA in 2005 as Senior Vice President, Worldwide Sales and became Executive Vice President, Worldwide Field Operations in 2009. Prior to NVDIA, he held positions in sales, marketing, and general management over a 22-year career at Sun Microsystems, Inc., a computing systems company. Mr. Puri previously held marketing, management consulting, and product development positions at Hewlett-Packard, an information technology company, Booz Allen Hamilton Inc., a management and technology consulting company, and Texas Instruments Incorporated. Mr. Puri holds a B.S.E.E. degree from the University of Minnesota, an M.S.E.E. degree from the California Institute of Technology and an M.B.A. degree from Harvard Business School.

Debora Shoquist joined NVDIA in 2007 as Senior Vice President of Operations and in 2009 became Executive Vice President of Operations. Prior to NVDIA, Ms. Shoquist served from 2004 to 2007 as Executive Vice President of Operations at JDS Uniphase Corp., a provider of communications test and measurement solutions and optical products for the telecommunications industry. She served from 2002 to 2004 as Senior Vice President and General Manager of the Electro-Optics business at Coherent, Inc., a manufacturer of commercial and scientific laser equipment. Previously, she worked at Quantum Corp., a data protection company, as President of the Personal Computer Hard Disk Drive Division, and at Hewlett-Packard. Ms. Shoquist holds a B.S. degree in Electrical Engineering from Kansas State University and a B.S. degree in Biology from Santa Clara University.

Timothy S. Teter joined NVDIA in 2017 as Senior Vice President, General Counsel and Secretary and became Executive Vice President, General Counsel and Secretary in February 2018. Prior to NVDIA, Mr. Teter spent more than two decades at the law firm of Cooley LLP, where he focused on litigating patent and technology related matters. Prior to attending law school, he worked as an engineer at Lockheed Missiles and Space Company, an aerospace company. Mr. Teter holds a B.S. degree in Mechanical Engineering from the University of California at Davis and a J.D. degree from Stanford Law School.

Available Information

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and, if applicable, amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended, or the Exchange Act, are available free of charge on or through our website, <http://www.nvidia.com>, as soon as reasonably practicable after we electronically file such material with, or furnish it to, the Securities and Exchange Commission, or the SEC. The SEC's website, <http://www.sec.gov>, contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. Our web site and the information on it or connected to it are not a part of this Annual Report on Form 10-K.

Item 1A. Risk Factors

The following risk factors should be considered in addition to the other information in this Annual Report on Form 10-K. The following risks could harm our business, financial condition, results of operations or reputation, which could cause our stock price to decline. Additional risks, trends and uncertainties not presently known to us or that we currently believe are immaterial may also harm our business, financial condition, results of operations or reputation.

Risk Factors Summary

Risks Related to Our Industry and Markets

- Failure to meet the evolving needs of our industry and markets may adversely impact our financial results.
- Competition could adversely impact our market share and financial results.

Risks Related to Demand, Supply, and Manufacturing

- Long manufacturing lead times and uncertain supply and capacity availability, combined with a failure to estimate customer demand accurately has led and could lead to mismatches between supply and demand.

- Dependency on third-party suppliers and their technology to manufacture, assemble, test, or package our products reduces our control over product quantity and quality, manufacturing yields, and product delivery schedules and could harm our business.
- Defects in our products have caused and could cause us to incur significant expenses to remediate and could damage our business.

Risks Related to Our Global Operating Business

- Adverse economic conditions may harm our business.
- International sales and operations are a significant part of our business, which exposes us to risks that could harm our business.
- Product, system security and data protection incidents or breaches, as well as cyber-attacks could disrupt our operations and adversely affect our financial condition, stock price and reputation.
- Business disruptions could harm our operations and financial results.
- Climate change may have a long-term impact on our business.
- We may not be able to realize the potential benefits of business investments or acquisitions, nor successfully integrate acquisition targets.
- A significant amount of our revenue stems from a limited number of partners and distributors and we have a concentration of sales to customers who purchase directly or indirectly from us, and our revenue could be adversely affected if we lose or are prevented from selling to any of these customers.
- Commercial arrangements expose us to counterparty risks, which may negatively impact our business, financial condition, or results of operations.
- We may be unable to attract, retain, and motivate our executives and key employees.
- Modification or interruption of our business processes and information systems may disrupt our business and internal controls.
- Our operating results have in the past fluctuated and may in the future fluctuate, and if our operating results are below the expectations of securities analysts or investors, our stock price could decline.

Risks Related to Regulatory, Legal, Our Stock, and Other Matters

- We are subject to complex laws, rules, regulations, and political and other actions, including restrictions on the export of our products, which may adversely impact our business.
- Scrutiny regarding our corporate sustainability practices could result in financial, reputational, or operational harm and liability.
- Issues relating to the responsible use of our technologies, including AI, may result in reputational or financial harm and liability.
- Adequately protecting our IP rights could be costly, and our ability to compete could be harmed if we are unsuccessful or if we are prohibited from making or selling our products.
- We are subject to stringent and changing data privacy and security laws, rules, regulations, and other obligations. These areas could damage our reputation, deter customers, affect product design, or result in legal or regulatory proceedings and liability.
- Our operating results may be adversely impacted by additional tax liabilities, higher than expected tax rates, changes in tax laws, and other tax-related factors.
- Our business is exposed to the burden and risks associated with litigation, investigations, and regulatory proceedings.
- Delaware law, provisions in our governing documents and our agreement with Microsoft could delay or prevent a change in control.

Risk Factors

Risks Related to Our Industry and Markets

Failure to meet the evolving needs of our industry and markets may adversely impact our financial results.

Our accelerated computing platforms experience rapid changes in technology, customer requirements, competitive products, and industry standards.

Our success depends on our ability to:

- timely identify industry changes, adapt our strategies, and develop new or enhance and maintain existing products and technologies that meet the evolving needs of our markets, including addressing unexpected shifts in industry standards or disruptive technological innovations that could render our products incompatible with those developed by other companies;
- develop or secure access to new products and technologies through investments in research and development;
- launch new offerings with new business models including software, services, and cloud solutions, as well as software-, infrastructure-, or platform-as-a-service solutions;
- expand the ecosystem for our products and technologies;
- meet evolving and prevailing customer and industry safety, security, reliability expectations, and compliance standards;
- manage product and software lifecycles to maintain customer and end-user satisfaction;
- develop, acquire, maintain, and secure access to the internal and external infrastructure needed to scale our business, including sufficient energy for powering data centers using our products, acquisition integrations, customer support, e-commerce, IP licensing capabilities, and cloud service capacity; and
- complete technical, financial, operational, compliance, sales and marketing investments for the above activities.

We have invested in research and development in markets where we have a limited operating history, which may not produce meaningful revenue for several years, if at all. If we fail to develop or monetize new products and technologies, or if they do not become widely adopted, our financial results could be adversely affected. Obtaining design wins may involve a lengthy process and depends on our ability to anticipate and provide features and functionality that customers will demand. They also do not guarantee revenue. Failure to obtain a design win may prevent us from obtaining future design wins in subsequent generations. We cannot ensure that our products and technologies will provide value to our customers and partners. If we fail any of these key success criteria, our financial results may be harmed.

We have entered into an intellectual property license arrangement with Groq, Inc., or Groq, that required significant, nonrefundable payments. Successfully incorporating the licensed technology into our architectures and product roadmaps requires significant engineering effort and may not occur on expected timelines or at all. The licensed technology may not achieve the desired results as designed or achieve customer or ecosystem adoption. The economic outcomes of this arrangement depend on our ability to translate the licensed technology into commercially viable products and services over time, and we may be unable to recover the associated costs or realize an adequate return on this spend. If our efforts to use the licensed technology are delayed or unsuccessful, our business, operating results, and financial condition could be negatively impacted.

We entered into multi-year cloud service agreements to support our research and development activities. The timing and availability of these cloud services have changed and may continue to shift, impacting our revenue, expenses, and development timelines, and these arrangements may not deliver anticipated benefits. We also offer or plan to offer standalone software solutions, including NVDIA AI Enterprise, NVDIA Omniverse, NVDIA DRIVE, and other software products. These business models or strategies may not be successful, and we may fail to sell any meaningful standalone software or services. We may incur significant costs and may not achieve any significant revenue from these offerings.

Competition could adversely impact our market share and financial results.

Our target markets remain competitive, and competition may intensify with expanding and changing product and service offerings, industry standards, customer and market needs, new entrants and consolidations. Our competitors' products, services and technologies, including those mentioned above in this Annual Report on Form 10-K, may be cheaper or provide better functionality or features than ours, which has resulted and may in the future result in lower-than-expected selling prices or demand for our products. Some of our competitors operate their own fabrication facilities, and have longer operating histories, larger customer bases, more comprehensive IP portfolios and patent protections, more design wins, and greater financial, sales, marketing and distribution resources than we do. These competitors may be able to acquire market share and/or prevent us from doing so, more effectively identify and capitalize upon opportunities in new markets and end-user trends, more quickly transition their products, and impinge on our ability to procure sufficient

foundry capacity and scarce input materials during a supply-constrained environment, which could harm our business. Some of our customers have in-house expertise and internal development capabilities similar to some of ours and can use or develop their own solutions to replace those we are providing. For example, others may offer cloud-based services that compete with our AI cloud service offerings, and we may not be able to establish market share sufficient to achieve the scale necessary to meet our business objectives. If we are unable to successfully compete in this environment, demand for our products, services and technologies could decrease, which may negatively impact our business.

Risks Related to Demand, Supply, and Manufacturing

Long manufacturing lead times and uncertain supply and capacity availability, combined with a failure to estimate customer demand accurately, has led and could lead to mismatches between supply and demand.

We have long manufacturing lead times and build finished products and maintain inventory in advance of anticipated demand. In periods of shortages impacting the semiconductor industry and/or limited supply or capacity in our supply chain, the lead times for certain supply may be extended. We have previously experienced and may continue to experience extended lead times of more than 12 months. To secure future supply and capacity, we have paid premiums, provided deposits, and entered into long-term supply agreements and capacity commitments, which have increased our product costs and this may continue. We may still be unable to secure sufficient commitments for capacity to address our business needs.

If we inaccurately estimate demand, or our customers change orders, as we have experienced in the past, we may not be able to reduce our supply commitments in time, at the same rate, or at all. Significant mismatches between supply and demand have varied across our market platforms, resulted in both product shortages and excess inventory, significantly harmed our financial results and could reoccur. If we underestimate demand, and our foundry partners and contract manufacturers are unable to increase production or provide sufficient supply, we may not be able to meet increased customer demand in a timely manner, or at all. Our reputation and customer relationships could be damaged and we could lose revenue and market share. Additionally, since some of our products are part of a complex data center buildout, supply constraints or availability issues with respect to any one component have had and may have a broader revenue impact. For example, our ability to sell certain products has been and could be impeded if components necessary for the finished products are not available from third parties.

If we overestimate demand, or if customers cancel or defer orders or choose to purchase from our competitors, we may not be able to utilize on-hand inventory or reduce purchase commitments accordingly. We have had to reduce average selling prices, including due to our channel pricing programs, increase prices for certain of our products as a result of our suppliers' increase in prices, write down our inventory, incur cancellation penalties, and record impairments, and may have to do so in the future. The impact of these risks would be amplified by our non-cancellable and non-returnable purchase orders placed in advance of our historical lead times and could be exacerbated if we need to make changes to the design of future products. These risks have increased and may continue to increase as our purchase obligations and prepaids have grown and are expected to continue to grow and become a greater portion of our total supply. All of these factors may negatively impact our gross margins and financial results.

Factors that have caused and/or could in the future cause us to underestimate or overestimate demand, and impact the timing and volume of our revenue, include:

- changes in product development cycles and time to market;
- competing technologies and competitor product releases, announcements or other actions;
- changes in business and economic conditions;
- sudden or sustained government lockdowns or public health issues;
- rapidly changing technology or customer requirements;
- the availability of sufficient data center capacity or energy for customers to procure;
- new product introductions and transitions resulting in less demand for existing products;
- new or unexpected end-use cases;
- increase in demand for competitive products;
- changes in end-user demand;
- purchasing decisions made, and inventory levels held by, distributors, ODMs, OEMs, system integrators, other channel partners and other third parties;

- the ability of developers, end customers and other third parties to build, enhance, and maintain accelerated computing applications that leverage our platforms;
- the demand for accelerated computing, AI-related cloud services, or large language models;
- changes that impact the ecosystem for the architectures underlying our products and technologies;
- government actions or changes in governmental policies, such as export controls, increased restrictions on gaming usage, or tariffs;
- our customers' and partners' ability to secure capital and energy and to build complex datacenter infrastructure timely; and
- the availability of third-party content on our platforms, such as GeForce NOW.

The availability of data centers, energy, and capital to support the buildout of NVIDIA AI infrastructure by our customers and partners is crucial, and any shortage of these and other necessary resources could impact our future revenue and financial performance. Expanding energy capacity to meet demand is a complex, multi-year process involving significant regulatory, technical, and construction challenges. In addition, access to capital can be particularly constrained for less-capitalized companies, which may face difficulties securing financing for large-scale infrastructure projects. These limitations could delay customer and partner deployments or reduce the scale of accelerated computing and AI adoption.

Challenges in estimating demand could become more pronounced or volatile in the future on both a global and regional basis. Extended lead times may occur if we experience other supply constraints caused by natural disasters, pandemics or other events. Geopolitical tensions in regions where we rely on suppliers, contract manufacturers, and assembly partners that are critical to our supply continuity, could have a material adverse impact on us. Publicly announced intentions by governments or other companies to purchase our products can further complicate our demand estimates, as such announcements are often non-binding and may not result in committed volumes.

We continue to increase our supply and capacity purchases with existing and new suppliers to support our demand projections and increasing complexity of our data center products. We expect supply constraints to be a headwind to Gaming in the first quarter of fiscal year 2027 and beyond. We have also entered and may continue to enter into prepaid manufacturing and capacity agreements to supply both current and future products. The increased purchase volumes and integration of new suppliers and contract manufacturers into our supply chain creates more complexity in managing multiple suppliers with variations in production planning, execution and logistics. Our expanding product portfolio and varying component compatibility and quality may lead to increased inventory levels. We have incurred and may in the future incur inventory provisions or impairments if our inventory or supply or capacity commitments exceed demand for our products or demand declines.

We are increasing our U.S.-based manufacturing and investing in specialized equipment and processes to support domestic production. We may experience delays or difficulties in scaling production as planned. Our ability to increase manufacturing capabilities will depend on the domestic manufacturing ecosystem's capacity to ramp production supply to the required volume timely. Delays or shortfalls could impact our ability to meet demand.

Product transitions are complex and we often ship both new and prior architecture products simultaneously as our channel partners prepare to ship and support new products. We are generally in various stages of transitioning the architectures of our Data Center, Gaming, Professional Visualization, and Automotive products. The computing industry is experiencing a broader and faster launch cadence of accelerated computing platforms to meet a growing and diverse set of AI opportunities. We have introduced a new product and architecture cadence of our Data Center solutions where we seek to complete new computing solutions each year and provide a greater variety of Data Center offerings. The increased frequency of these transitions and the larger number of products and product configurations may magnify the challenges associated with managing our supply and demand which may further create volatility in our revenue. Qualification time for new products, customers anticipating product transitions, and channel partners reducing channel inventory of prior architectures ahead of new product introductions can reduce, or create volatility in, our revenue. Customers may delay adopting new architectures if their data center infrastructure is not ready, which could affect the timing of our revenue. We have experienced and may in the future experience reduced demand for current generation architectures when customers anticipate transitions, and we may be unable to sell multiple product architectures at the same time for current and future architecture transitions. Our financial results have been and may in the future be negatively impacted if we are unable to execute our architectural transitions as planned for any reason. The increased frequency and complexity of newly introduced products could result in unanticipated quality or production issues that could increase the magnitude of inventory provisions, warranty, or other costs or result in product delays. For example, our gross margins in the second quarter of fiscal year 2025 were negatively impacted by inventory provisions for low-yielding Blackwell material.

We incur significant engineering development resources for new products, and changes to our product roadmap may impact our ability to develop other products or adequately manage our supply chain cost. Customers may delay purchasing existing products as we increase the frequency of new products or may not be able to adopt our new

products as fast as forecasted, both impacting the timing of our revenue and supply chain cost. While we have managed prior product transitions and have sold multiple product architectures at the same time, these transitions are difficult, may impair our ability to predict demand and impact our supply mix, and may cause us to incur additional costs.

Demand estimates for our products, applications, and services can be incorrect, which may create volatility in our revenue or supply levels. We may not be able to generate significant revenue from them. Because our products may be used in multiple use cases and applications, it is difficult to estimate with any reasonable degree of precision the impact of accelerated computing and AI models on our reported revenue or forecasted demand.

The use of our GPUs for new, mercurial, or trendy applications, has impacted and can impact in the future, demand for our products, including by leading to inconsistent spikes and drops in demand. For example, several years ago, our Gaming GPUs began to be used for mining digital currencies, such as Ethereum. It is difficult for us to estimate with any reasonable degree of precision the past or current impact of cryptocurrency mining, or forecast the future impact of cryptocurrency mining, on demand for our products. Volatility in the cryptocurrency market, including new compute technologies, price changes in cryptocurrencies, government cryptocurrency policies and regulations, new cryptocurrency standards and changes in the method of verifying blockchain transactions, has impacted and can in the future impact cryptocurrency mining and demand for our products and can further impact our ability to estimate demand for our products. Changes to cryptocurrency standards and processes including, but not limited to, the Ethereum 2.0 merge in 2022, have reduced and may in the future decrease the usage of GPUs for Ethereum mining. This has created and may in the future create increased aftermarket sales of our GPUs, which could negatively impact retail prices for our GPUs and reduce demand for our new GPUs. In general, our new products or previously sold products may be resold online or on the unauthorized "gray market," which also makes demand forecasting difficult. Gray market products and reseller marketplaces compete with our new products and distribution channels. Our inability to accurately predict our demand that arises from new use cases may create volatility in our revenue.

Dependency on third-party suppliers and their technology to manufacture, assemble, test, or package our products reduces our control over product quantity and quality, manufacturing yields, and product delivery schedules and could harm our business.

We depend on foundries to manufacture our semiconductor wafers using their fabrication equipment and techniques. We do not assemble, test, or package our products, but instead contract with independent subcontractors. These subcontractors assist with procuring components used in our systems, boards, and products. We face risks which have adversely affected or could adversely affect our ability to meet customer demand and scale our supply chain, negatively impact longer-term demand for our products and services, and adversely affect our business operations, gross margin, revenue and/or financial results, including:

- lack of guaranteed supply of components and capacity;
- decommitment by our suppliers;
- potential higher wafer and component prices resulting from incorrectly estimating demand and failing to place orders with our suppliers with sufficient quantities or timely;
- failure by our foundries or contract manufacturers to procure raw materials or provide adequate levels of manufacturing or test capacity for our products;
- failure by our foundries to develop, obtain, or successfully implement high quality process technologies, including transitions to smaller geometry process technologies such as advanced process node technologies and memory designs needed to manufacture our products;
- failure by our suppliers to comply with our policies and expectations and emerging regulatory requirements;
- limited number and geographic concentration of global suppliers, foundries, contract manufacturers, assembly and test providers and memory manufacturers;
- loss of a supplier and additional expense and/or production delays as a result of qualifying a new foundry or subcontractor and commencing volume production or testing in the event of a loss, addition or change of a supplier;
- lack of direct control over product quantity, quality, and delivery schedules;
- integration of new suppliers and contract manufacturers creating more complexity in managing multiple suppliers with variations in production planning, execution, and logistics;
- suppliers or their suppliers failing to provide high quality products and/or making changes to their products without our qualification;

- delays in product shipments, shortages, a decrease in product quality and/or higher expenses in the event our subcontractors or foundries prioritize our competitors' or other customers' orders over ours;
- requirements to place orders that are not cancellable upon changes in demand or requirements to prepay for supply in advance;
- low manufacturing yields resulting from issues in our product design or a foundry's proprietary process technology;
- suppliers extending lead times and/or increasing costs during shortages; and
- disruptions in manufacturing, assembly and other processes due to closures related to heat waves, earthquakes, fires, or other natural disasters, electricity conservation efforts, pandemics, and cybersecurity incidents.

Defects in our products have caused and could cause us to incur significant expenses to remediate, which can damage our reputation and cause us to lose market share.

Our hardware and software product and service offerings are complex. They have in the past and may in the future contain defects, security vulnerabilities, experience failures, or unsatisfactory performance due to issues in design, fabrication, packaging, materials, bugs and/or use within a system. These risks may also increase when our products are introduced into new devices, markets, technologies and applications, or new versions are released, and when we rely on partners to supply and manufacture components that are used in our products, as these arrangements reduce our direct control over production. AI software products that we or our partners offer rely on training data that may originate from third parties and new training methods, and the resulting products may contain unknown or undetected defects and errors, or reflect unintended bias. Although arrangements with component providers may contain provisions for product defect expense reimbursement, we generally remain responsible to the customer for warranty product defects that may occur from time to time. Some failures in our products or services have been in the past and may in the future be only discovered after a product or service has been shipped or used.

Undiscovered vulnerabilities in our products or services could result in loss of data or intangible property, or expose our customers to unscrupulous third parties who develop and deploy malicious software programs that could attack our products or services. Defects or failure of our offerings to perform to specifications could lead to substantial damage to the products in which our offerings have been integrated by OEMs, ODMs, AIB manufacturers, automotive manufacturers, and tier 1 automotive suppliers, and to the user of such end product. Such defects have in the past had an adverse effect on our cost and supply of components and finished goods and may in the future cause us to incur significant warranty, support, and repair or replacement costs as part of a product recall or otherwise, write-off the value of related inventory, and divert the attention of our engineering and management personnel from our product development efforts to find and correct the issue. Our efforts to remedy these issues may not be timely or satisfactory to our customers. An error or defect in new products, releases or related software drivers after commencement of commercial shipments could result in failure to achieve market acceptance, loss of design wins, temporary or permanent withdrawal from a product or market and harm to our relationships with existing and prospective customers and partners and consumers' perceptions of our brand, which would in turn negatively impact our business operations, gross margin, revenue and/or financial results. We may be required to reimburse our customers, partners or consumers, including for costs to repair or replace products in the field or in connection with indemnification obligations, or pay fines imposed by regulatory agencies.

In general, if a product liability claim regarding any of our products is brought against us, even if the alleged damage is due to the actions or inactions of a third party, such as within our supply chain, the cost of defending the claim could be significant and would divert the efforts of our technical and management personnel and harm our business. Further, our business liability insurance may be inadequate or future coverage may be unavailable on acceptable terms, which could adversely impact our financial results.

Risks Related to Our Global Operating Business

Adverse economic conditions may harm our business.

Economic and industry uncertainty or changes, including recession or slowing growth, inflation, changes or uncertainty in fiscal, monetary, or trade policy, disruptions to capital markets and the banking system, currency fluctuations, higher interest rates, tighter credit, lower capital expenditures by businesses, including on IT infrastructure, increases in unemployment, labor shortages, and lower consumer confidence and spending, global supply chain constraints, and global economic and geopolitical developments, including the implementation of tariffs by the USG or other governments, have in the past and/or could in the future have adverse, wide-ranging effects on our business and financial results, including:

- increased costs for wafers, components, logistics, and other supply chain expenses, which have negatively impacted our gross margin in the past and may do so in the future;

- increased supply, employee, facilities and infrastructure costs and volatility in the financial markets, which have reduced and may in the future reduce our margins;
- decrease in demand for our products, services and technologies and those of our customers, partners or licensees;
- the inability of our suppliers to deliver on their supply commitments to us and our customers' or our licensees' inability to supply products to customers and/or end users;
- limits on our ability to forecast operating results and make business decisions;
- the insolvency of key suppliers, distributors, customers, CSPs, data center providers, licensing parties or other third parties we rely on;
- reduced profitability of customers, which may cause them to scale back operations, exit businesses, file for bankruptcy protection and potentially cease operations, or lead to mergers, consolidations or strategic alliances among other companies, which could adversely affect our ability to compete effectively;
- increased credit and collectability risks, higher borrowing costs or reduced availability of capital markets, reduced liquidity, adverse impacts on our customers and suppliers; and
- failures of counterparties, including financial institutions and insurers, asset impairments, and declines in the value of our financial instruments.

Adverse developments affecting financial institutions, such as bank failures or instability, or concerns or speculation about similar events or risks, could lead to market-wide liquidity problems and other disruptions, which could impact our customers' ability to fulfill their payment obligations to us, our vendors' ability to fulfill their contractual obligations to us, or our ability to fulfill our own obligations.

Additionally, we maintain a portfolio of liquid investments for cash management purposes, including various holdings, types, and maturities. These investments are subject to general credit, liquidity, market and interest rate risks, which may be exacerbated by market downturns or events that affect global financial markets, as described above. A majority of our investment portfolio comprises USG securities. A decline in global financial markets for long periods or a downgrade of the USG credit rating due to an actual or threatened default on government debt could result in higher interest rates, a decline in the value of the U.S. dollar, reduced market liquidity or other adverse conditions. These factors could cause an unrealized or realized loss position in our investments or require us to record impairment charges.

International sales and operations are a significant part of our business, which exposes us to risks that could harm our business.

We sell our products internationally, and we also have operations and conduct business internationally. Our semiconductor wafers are manufactured, assembled, tested and packaged by third parties located outside of the United States, and we generated 31% of our revenue in fiscal year 2026 from sales outside the United States. The market in China, where our offerings are limited by export controls, is highly competitive and we expect it to remain competitive going forward. The global nature of our business subjects us to a number of risks and uncertainties, which have had in the past and could in the future have a material adverse effect on our business, financial condition and results of operations. These include domestic and international economic and political conditions in countries in which we and our suppliers and manufacturers do business, government lockdowns to control case spread of global or local health issues, differing legal standards with respect to protection of IP and employment practices, different domestic and international business and cultural practices, disruptions to capital markets, counter-inflation policies, currency fluctuations, natural disasters, acts of war or other military actions, terrorism, public health issues, restrictions on international trade, such as tariffs, sanctions, and other controls on imports or exports, and catastrophic events.

Product, system security, and data protection incidents or breaches, as well as cyber-attacks, could disrupt our operations, reduce our expected revenue, increase our expenses, and significantly harm our business and reputation.

Security breaches, computer malware, social-engineering attacks, denial-of-service attacks, software bugs, server malfunctions, software or hardware failures, loss of data or other information technology assets, and other cyber-attacks are becoming increasingly sophisticated, making it more difficult to successfully detect, defend against them or implement adequate preventative measures.

Cyber-attacks, including ransomware attacks by organized criminal threat actors, nation-states, and nation-state-supported actors, may become more prevalent and severe. Our ability to recover from ransomware attacks may be limited if our backups have been affected by the attack, or if restore from backups is delayed or not feasible.

Individuals, groups of hackers and sophisticated organizations, including nation-states and nation-state-supported actors, and other threat actors have engaged and are expected to continue to engage in cyber-attacks. Additionally, some actors are using AI technology to launch more automated, targeted and coordinated attacks. Due to geopolitical conflicts

and during times of war or other major conflicts, we and the third parties we rely upon may be subject to a heightened risk of cyber-attacks that could materially disrupt our ability to provide services and products. We may also face cybersecurity threats due to error or intentional misconduct by employees, contractors or other third-party service providers. Certain aspects of effective cybersecurity are dependent upon our employees, contractors and/or other third-party service providers safeguarding our sensitive information and adhering to our security policies and access control mechanisms. We have in the past experienced, and may in the future experience, security incidents arising from a failure to properly handle sensitive information or adhere to our security policies and access control mechanisms, including, for example, employees posting company data on third-party websites without permission, and, although no such events have had a material adverse effect on our business, there can be no assurance that an insider threat or error will not result in an incident that is material to us or lead to negative publicity. Furthermore, we rely on products and services provided by third-party suppliers to operate certain critical business systems, including without limitation, cloud-based infrastructure, encryption and authentication technology, employee email and other functions, which exposes us to supply-chain attacks or other business disruptions. We cannot guarantee that third parties and infrastructure in our supply chain or our partners' supply chains have not been compromised or that they do not contain exploitable vulnerabilities, defects or bugs that could result in a breach of or disruption to our information technology systems, including our products and services, or the third-party information technology systems that support our services. We have incorporated third-party data into some of our AI models and used open-source datasets to train our models and may continue to do so. These datasets may be flawed, insufficient, or contain certain biased information, and may otherwise decrease resilience to security incidents that may compromise the integrity of our AI outputs, leading to potential reputational damage, regulatory scrutiny, or adverse impacts on the performance and reliability of our products, which could, in turn, affect our partners' operations, customer trust, and our revenue. We may have limited insight into the data privacy or security practices of third-party suppliers, including for our AI algorithms. Our ability to monitor these third parties' information security practices is limited, and they may not have adequate information security measures in place. In addition, if one of our third-party suppliers suffers a security incident (which has happened in the past and may happen in the future), our response may be limited or more difficult because we may not have direct access to their systems, logs and other information related to the security incident. Additionally, we are incorporated into the supply chain of a large number of entities worldwide and, as a result, if our products or services are compromised, a significant number of our customers and their data could be affected, which could result in potential liability and harm our business.

To defend against security incidents, we must continuously engineer more secure products and enhance security and reliability features, which is expected to result in increased expenses. We must also continue to develop our security measures, including training programs and security awareness initiatives, designed to ensure our suppliers have appropriate security measures in place, and continue to meet the evolving security requirements of our customers, applicable industry standards, and government regulations. While we invest in training programs and security awareness initiatives and take steps to detect and remediate certain vulnerabilities that we have identified, we may not always be able to prevent threats or detect and mitigate all vulnerabilities in our security controls, systems or software, including third-party software we have installed, as such threats and techniques change frequently and may not be detected until after a security incident has occurred. Further, we may experience delays in developing and deploying remedial measures designed to address identified vulnerabilities. These vulnerabilities could result in reputational and financial harm, and if exploited, these vulnerabilities could result in a security incident.

We hold confidential, sensitive, personal and proprietary information, including information from partners and customers. Breaches of our security measures, along with reported or perceived vulnerabilities or unapproved dissemination of proprietary information or sensitive or confidential data about us or third parties, could expose us and the parties affected to a risk of loss, or misuse of this information, potentially resulting in litigation and subsequent liability, regulatory inquiries or actions, damage to our brand and reputation or other harm, including financial, to our business. For example, we hold proprietary game source code from third-party partners in our GFN service. Breaches of our GFN security measures, which have happened in the past, could expose our partners to the risk of loss or misuse of this source code, damage both us and our partners, and expose NVIDIA to potential litigation and liability. If we or a third party we rely on experience a security incident, which has occurred in the past, or are perceived to have experienced a security incident, we may experience adverse consequences, including government enforcement actions, additional reporting requirements and/or oversight, restrictions on processing data, litigation, indemnification obligations, reputational harm, diversion of funds, diversion of management attention, financial loss, loss of data, material disruptions in our systems and operations, supply chain, and ability to produce, sell and distribute our goods and services, and other similar harms. Inability to fulfill orders, delayed sales, lower margins or lost customers as a result of these disruptions could adversely affect our financial results, stock price and reputation. We are required by certain data privacy and security obligations to notify relevant stakeholders, including affected individuals, customers, regulators and investors, of security incidents, and mandatory disclosure of such incidents could lead to negative publicity. In addition to experiencing a security incident, third parties may gather, collect or infer sensitive information about us from public sources, data brokers or other means that reveals competitively sensitive details about our organization and could be used to harm our business.

Business disruptions could harm our operations, lead to a decline in revenue and increase our costs.

Factors that have caused and/or could in the future cause disruptions to our worldwide operations include: natural disasters, extreme weather conditions, power or water shortages, critical infrastructure failures, telecommunications failures, supplier disruptions, terrorist attacks, acts of violence, political and/or civil unrest, acts of war or other military

actions, epidemics or pandemics, abrupt regulatory changes, and other natural or man-made disasters and catastrophic events. Our corporate headquarters, a large portion of our current data center capacity, and a portion of our research and development activities are located in California, and other critical business operations, finished goods inventory and some of our suppliers are located in Asia, making our operations vulnerable to natural disasters such as earthquakes, wildfires or other business disruptions occurring in these geographical areas. Catastrophic events can also have an impact on third-party vendors who provide us critical infrastructure services for IT and research and development systems and personnel. Geopolitical and domestic political developments and other events beyond our control can increase economic volatility globally. Political instability, changes in government or adverse political developments in or around any of the major countries in which we do business may harm our business, financial condition, and results of operations. Worldwide geopolitical tensions and conflicts, including but not limited to China, Hong Kong, Israel, Korea and Taiwan where the manufacture of our product components and final assembly of our products are concentrated may result in changing regulatory requirements, and other disruptions that could impact our operations and operating strategies, product demand, access to global markets, hiring, and profitability. For example, other countries have restricted and may continue in the future to restrict business with the State of Israel, where we have engineering, sales support operations and manufacturing, and companies with Israeli operations, including by economic boycotts. Our operations could be harmed and our costs could increase if manufacturing, logistics, or other operations are disrupted for any reason, including natural disasters, high heat events, water shortages, power shortages, information technology system failures or cyber-attacks, military actions or economic, and business, labor, environmental, public health, or political issues. The ultimate impact on us, our third-party foundries and other suppliers of being located and consolidated in certain geographical areas is unknown. In the event a disaster, war, or catastrophic event affects us, the third-party systems on which we rely, or our customers, our business could be harmed as a result of declines in revenue, increases in expenses, and substantial expenditures and time spent to fully resume operations. Our business continuity and disaster recovery planning may not be sufficient for all eventualities. All of these risks and conditions could materially adversely affect our future sales and operating results.

We are monitoring the impact of the geopolitical conflict in and around Israel on our operations, including the health and safety of our approximately 6,000 employees in the region who primarily support the research and development, operations, and sales and marketing of our networking products. We have experienced periods where some of our employees in the region have been on active military duty for an extended period, which caused limited disruption to our product development or operations. We have not experienced significant impact or expense to our business; however, if the conflict is further extended or expanded, it could impact future product development, operations, and revenue or create other uncertainty for our business.

Additionally, interruptions or delays in services from CSPs, data center co-location partners, and other third parties on which we rely, including due to the events described above or other events such as the insolvency of these parties, could impair our ability to provide our products and services and harm our business. As we increase our reliance on these third-party systems and services, our exposure to damage from service interruptions, defects, disruptions, outages, shortages and other performance and quality problems may increase. Data centers depend on access to clean water and predictable energy. Power or water shortages, land or permitting constraints, or regulations that limit energy, water, or land availability, could impair the ability of our customers to expand their data center capacity and consume our products and services, which may in turn negatively impact our business.

Climate change may have a long-term impact on our business.

Climate change may have an increasingly adverse impact on our business and on our customers, partners and vendors. Water and energy availability and reliability in the regions where we conduct business is critical, and certain of our facilities may be vulnerable to the impacts of extreme weather events. Extreme heat and wind coupled with dry conditions in Northern California may lead to power safety shut offs due to wildfire risk, which can have adverse implications for our Santa Clara, California headquarter offices and data centers, including impairing the ability of our employees to work effectively. Climate change, its impact on our supply chain and critical infrastructure worldwide and its potential to increase political instability in regions where we, our customers, partners and our vendors do business, may disrupt our business and cause us to experience higher attrition, losses and costs to maintain or resume operations. Although we maintain insurance coverage for a variety of property, casualty, and other risks, the types and amounts of insurance we obtain vary depending on availability and cost. Some of our policies have large deductibles and broad exclusions, and our insurance providers may be unable or unwilling to pay a claim. Losses not covered by insurance may be large, which could harm our results of operations and financial condition.

Our business and those of our suppliers and customers is subject to sustainability-related laws, regulations and lawsuits. New or proposed regulations relating to carbon taxes, fuel or energy taxes, pollution limits, sustainability-related disclosure and governance and supply chain governance could result in greater direct costs, including costs associated with changes to manufacturing processes or the procurement of raw materials used in manufacturing processes, increased capital expenditures to improve facilities and equipment, higher compliance and energy costs to reduce emissions, other compliance costs, and greater indirect costs resulting from our customers and/or suppliers incurring additional compliance costs that are passed on to us. These costs and restrictions could harm our business and results of operations by increasing our expenses or requiring us to alter our operations and product design activities.

Stakeholder groups may find us insufficiently responsive to the implications of climate change, and therefore we may face legal action or reputational harm. We may not achieve our stated sustainability-related goals, which could harm our reputation, or we may incur additional, unexpected costs to achieve such goals. We may also experience contractual disputes due to supply chain delays arising from climate change-related disruptions, which could result in increased litigation and costs.

We also face risks related to business trends that may be influenced by climate change concerns. Our business could be negatively impacted by concerns around the high absolute energy requirements of our GPUs, despite their much more energy efficient design and operation relative to alternative computing platforms.

We may not be able to realize the potential benefits of business investments or acquisitions, and we may not be able to successfully integrate acquired companies, which could hurt our ability to grow our business, develop new products or sell our products.

We acquire and invest in businesses that offer products, services and technologies that we believe will help expand or enhance our strategic objectives. Acquisitions or investments involve significant challenges and risks and could impair our ability to grow our business, develop new products or sell our products and ultimately could have a negative impact on our financial results. If we pursue a particular transaction, we may limit our ability to enter into other transactions that could help us achieve our other strategic objectives. If we are unable to timely complete acquisitions, including due to delays and challenges in obtaining regulatory approvals, we may be unable to pursue other transactions, we may not be able to retain critical talent from the target company, technology may evolve and make the acquisition less attractive, and other changes can take place, which could reduce the anticipated benefits of the transaction and negatively impact our business. Regulators could also impose conditions that reduce the ultimate value of our acquisitions. In addition, to the extent that our perceived ability to consummate acquisitions is harmed, future acquisitions may be more difficult, complex or expensive.

Our investments in companies could create volatility and fluctuations in our results. These investments may generate realized and unrealized gains or losses and we could realize losses up to the value of the investments. We have invested and may continue to invest in our ecosystem. Many of these companies may not achieve profitability in the near term, or at all, and there is no guarantee that we will realize a return on our investment. We may continue to invest in companies to further our strategic objectives and to support certain key business initiatives, which could be subject to delays and challenges in obtaining regulatory approvals. Our investments in private companies include early-stage companies still defining their strategic direction. Many of the securities in which we invest are non-marketable and illiquid at the time of our initial investment. To the extent any of the companies in which we invest are not successful, we could recognize an impairment and/or lose all or part of our investment.

We are finalizing an investment and partnership agreement with OpenAI. There is no assurance that we will enter into an investment and partnership agreement with OpenAI or that a transaction will be completed.

Our investment portfolio contains industry sector concentration risks, and a decline in any one or multiple industry sectors could increase our impairment losses.

We face additional risks related to acquisitions and strategic investments, including the diversion of capital and other resources, including management's attention; difficulty in realizing a satisfactory return and uncertainties to realize the benefits of an acquisition or strategic investment, if at all; difficulty or inability in obtaining governmental, regulatory approval or restrictions or other consents and approvals or financing; legal proceedings initiated as a result of an acquisition or investment; and potential failure of our due diligence processes to identify significant issues with the assets or company in which we are investing or are acquiring.

Additional risks relating to acquisitions include, but are not limited to:

- difficulty in integrating the technology, systems, products, policies, processes, or operations and integrating and retaining the employees, including key personnel, of the acquired business;
- assumption of liabilities and incurring amortization expenses, impairment charges to goodwill or write-downs of acquired assets;
- integrating accounting, forecasting and controls, procedures and reporting cycles;
- coordinating and integrating operations, particularly in countries in which we do not currently operate;
- stock price impact, fines, fees or reputation harm if we are unable to obtain regulatory approval for an acquisition or are otherwise unable to close an acquisition;
- potential issuances of debt to finance our acquisitions, resulting in increased debt, increased interest expense, and compliance with debt covenants or other restrictions;
- the potential for our acquisitions to result in dilutive issuances of our equity securities;

- the potential variability of the amount and form of any performance-based consideration;
- negative changes in general economic conditions in the regions or the industries in which we or our target operate;
- exposure to additional cybersecurity risks and vulnerabilities; and
- impairment of relationships with, or loss of our or our target's employees, vendors and customers.

For example, when integrating acquisition target systems into our own, we have experienced and may continue to experience challenges including lengthy and costly systems integration, delays in purchasing and shipping products, difficulties with system integration via electronic data interchange and other processes with our key suppliers and customers, and training and change management needs of integration personnel. These challenges have impacted our results of operations and may continue to do so in the future.

We receive a significant amount of our revenue from a limited number of partners and distributors and we have a concentration of sales to customers who purchase directly or indirectly from us, and our revenue could be adversely affected if we lose or are prevented from selling to any of these customers.

We have experienced periods where we receive a significant amount of our revenue from a limited number of customers, and this trend may continue. For fiscal year 2026, sales to one direct customer represented 22% of total revenue and sales to another direct customer represented 14% of total revenue, all of which were primarily attributable to the Compute & Networking segment. With several of these partners, we are selling multiple products and systems in our portfolio through their channels. Our operating results depend on sales to our partner network, as well as the ability of these partners to sell products that incorporate our technologies. We have a small number of partners that are involved in system integration with our key customers. As our system design becomes increasingly complex, system integrators may be unable to meet specifications of our key customers. Changes in our partners' or customers' business models or their ownership can reduce the number of partners available to us and harm our ability to sell our advanced data center systems to customers. In the future, these partners may decide to purchase fewer products, not to incorporate our products into their ecosystem, or to alter their purchasing patterns in some other way. Because most of our sales are made on a purchase order basis, our customers can generally cancel, change, or delay product purchase commitments with little notice to us and without penalty. Our partners or customers may develop their own solutions; our customers may purchase products from our competitors; and our partners may discontinue sales or lose market share in the markets for which they purchase our products, all of which may alter partners' or customers' purchasing patterns. Many of our indirect customers often do not purchase directly from us but through multiple OEMs, ODMs, system integrators, distributors, and other channel partners. We generate a significant amount of our revenue from a limited number of indirect customers, and we estimate some individually representing 10% or more of our revenue. If end demand increases or our finished goods supply availability is concentrated near a quarter end, the system integrators, distributors, and channel partners may have limited ability to increase their credit, which could impact the timing and amount of our revenue. The loss of any of our large customers, a significant reduction in purchases by them, our inability to sell to a customer due to U.S. or other countries' trade restrictions, or any difficulties in collecting accounts receivable would likely harm our financial condition and results of operations.

Commercial arrangements expose us to counterparty risks.

We have entered and may in the future enter into commercial arrangements, including long-term capacity purchase obligations and financial guarantees, and have been asked to offer financing arrangements to support our customers' and partners' buildout of datacenter infrastructure. We have not entered into any financing arrangements. Commercial arrangements expose us to counterparty risk, including customers' or partners' inability to fulfill their financial commitments and secure necessary financing or infrastructure, the occurrence of significant project delays, and counterparty financial distress or insolvency, all of which may negatively impact our business, financial condition, or results of operations. Financing arrangements, if undertaken, may in some circumstances result in lower upfront cash flows associated with extended payment terms or payment terms made over a multi-year term and may increase credit risk.

If we are unable to attract, retain and motivate our executives and key employees, our business may be harmed.

To remain competitive and successfully execute our business strategy, we must attract, retain, and motivate our executives and key employees, as well as recruit and develop exceptional talent. However, labor is subject to external factors that are beyond our control, including our industry's increasingly highly competitive market for skilled workers and leaders, and workforce participation rates. Changes in immigration and work permit regulations, or in their administration or interpretation, could impair our ability to attract, employ and retain qualified employees. Competition for talent drives up costs in the form of cash and stock-based compensation. In times of stock price volatility, as we have experienced in the past and may experience in the future, the retentive value of our stock-based compensation may decrease. Additionally, we are highly dependent on the services of our longstanding executive team. Failure to ensure effective succession planning, transfer of knowledge, and smooth transitions involving executives and key employees could hinder our strategic planning, execution, and long-term success.

Our business is dependent upon the proper functioning of our business processes and information systems and modification or interruption of such systems may disrupt our business and internal controls.

We rely upon internal processes and information systems to support key business functions, including our assessment of internal controls over financial reporting as required by Section 404 of the Sarbanes-Oxley Act. The efficient operation and scalability of these processes and systems is critical to support our growth. We continue to design and implement updated accounting functionality related to a new enterprise resource planning, or ERP, system. Any ERP system implementation may introduce problems, such as quality issues or programming errors, that could have an impact on our continued ability to successfully operate our business or to timely and accurately report our financial results. These changes may be costly and disruptive to our operations and could impose substantial demands on management time. Failure to implement new or updated controls, or difficulties encountered in their implementation, could harm our operating results or cause us to fail to meet our reporting obligations.

Identification of material weaknesses in our internal controls, even if quickly remediated once disclosed, may cause investors to lose confidence in our financial statements and our stock price may decline. Remediation of any material weakness could require us to incur significant expenses, and if we fail to remediate any material weakness, our financial statements may be inaccurate, we may be required to restate our financial statements, our ability to report our financial results on a timely and accurate basis may be adversely affected, our access to the capital markets may be restricted, our stock price may decline, and we may be subject to sanctions or investigation by regulatory authorities.

Our operating results have in the past fluctuated and may in the future fluctuate, and if our operating results are below the expectations of securities analysts or investors, our stock price could decline.

Our operating results have in the past fluctuated and may continue to fluctuate due to a number of factors. Therefore, investors should not rely on our past results of operations as an indication of our future performance. Factors that could affect our results of operations include, but are not limited to:

- our ability to adjust spending due to the multi-year development cycle for some of our products and services;
- our ability to comply with our contractual obligations to customers;
- our extended payment term arrangements with certain customers, the inability of some customers to make required payments, our ability to obtain credit insurance for customers with extended payment terms, and customer bad debt write-offs;
- our vendors' payment requirements;
- unanticipated costs associated with environmental liabilities; and
- changes in financial accounting standards or interpretations of existing standards.

Any of these factors could prevent us from achieving our anticipated financial results. For example, we have granted and may continue to grant extended payment terms to some customers, particularly during macroeconomic downturns, which could impact our ability to collect payment. Our vendors have requested and may continue to ask for shorter payment terms, which may impact our cash flow generation. These arrangements reduce the cash we have available for general business operations. In addition, the pace of growth in our operating expenses and investments may lag our revenue growth, creating volatility or periods where profitability levels may not be sustainable. Failure to meet our expectations or the expectations of our investors or security analysts is likely to cause our stock price to decline, as it has in the past, or substantial price volatility.

Risks Related to Regulatory, Legal, Our Stock and Other Matters

We are subject to complex laws, rules, regulations, and political and other actions, including restrictions on the export of our products, which may adversely impact our business.

We are subject to laws and regulations domestically and worldwide, affecting our operations in areas including, but not limited to, IP ownership and infringement; taxes; import and export requirements and tariffs; anti-corruption, including the Foreign Corrupt Practices Act; business acquisitions; foreign exchange controls and cash repatriation restrictions; foreign ownership and investment; data privacy requirements; competition and antitrust; advertising; employment; product regulations; cybersecurity, environmental, health, and safety requirements; the responsible use of AI; sustainability, cryptocurrency, and consumer laws. Compliance with such requirements can be onerous and expensive, could impact our competitive position, and may negatively impact our business operations and ability to manufacture and ship our products. There can be no assurance that our employees, contractors, suppliers, customers or agents will not violate applicable laws or the policies, controls, and procedures that we have designed to help ensure compliance with such laws, and violations could result in fines, criminal sanctions against us, our officers, or our employees, prohibitions on the conduct of our business, and damage to our reputation. Changes to the laws, rules and regulations to which we are subject, or changes to their interpretation and enforcement, could lead to materially greater compliance and other costs, and/or further restrictions on our ability to manufacture and supply our products and operate our business. For example,

we may face increased compliance costs as a result of changes or increases in antitrust legislation, regulation, administrative rule making, increased focus from regulators on cybersecurity vulnerabilities and risks. Our position in markets relating to AI has led to increased interest in our business from regulators worldwide, including the European Union, the United States, the United Kingdom, South Korea, Japan, and China. For example, the French Competition Authority collected information from us regarding our business and competition in the graphics card and CSP market as part of an ongoing inquiry into competition in those markets. We have also received, and continue to receive, broad requests for information from competition regulators in the European Union, the United States, the United Kingdom, China, and South Korea regarding our sales of GPUs and other NVIDIA products, our efforts to allocate supply, foundation models and our investments, partnerships and other agreements with companies developing foundation models, the markets in which we compete and our competition, our strategies, roadmaps, and efforts to develop, market, and sell hardware, software, and system solutions, and our agreements with customers, suppliers, and partners. We expect to receive additional requests for information in the future. Such requests have been and are likely to be expensive and burdensome and could negatively impact our business and our relationships with customers, suppliers, and partners.

Governments and regulators are also considering, and in certain cases, have imposed restrictions on the hardware, software, and systems used to develop frontier foundation models and generative AI. For example, the EU AI Act became effective on August 1, 2024 and will be fully applicable after a two-year transitional period. The EU AI Act may impact our ability to train, deploy, or release AI models in the EU. Several states are considering enacting or have already enacted regulations concerning AI technologies, with new state laws that took effect on January 1, 2026, which may impact our ability to train, deploy, or release AI models, and increase our compliance costs. Restrictions under these and any other regulations, if implemented, could increase the costs and burdens to us and our customers, delay or halt deployment of new systems using our products, and reduce the number of new entrants and customers, negatively impacting our business and financial results. Revisions to laws or regulations or their interpretation and enforcement could also result in increased taxation, trade sanctions, the imposition of or increase to import duties or tariffs, restrictions and controls on imports or exports, or other retaliatory actions, which could have an adverse effect on our business plans or impact the timing of our shipments. Additionally, changes in the public perception of governments in the regions where we operate or plan to operate could negatively impact our business and results of operations.

Government actions, including trade protection and national and economic security policies of U.S. and foreign government bodies, such as tariffs, import or export regulations, including deemed export restrictions and restrictions on the activities of U.S. persons, trade and economic sanctions, decrees, quotas or other trade barriers and restrictions could affect our ability to ship products, provide services to our customers and employees, do business without an export license with entities on the U.S. Department of Commerce's U.S. Entity List or other USG restricted parties lists (which is expected to change from time to time), and generally fulfill our contractual obligations and have a material adverse effect on our business. If we were ever found to have violated export control laws or sanctions of the U.S. or similar applicable non-U.S. laws, even if the violation occurred without our knowledge, we may be subject to various penalties available under the laws, any of which could have a material and adverse impact on our business, operating results and financial condition.

For example, in response to the war in Ukraine, the United States and other jurisdictions imposed economic sanctions and export control measures which blocked the passage of our products, services and support into Russia, Belarus, and certain regions of Ukraine. In fiscal year 2023, we stopped direct sales to Russia and closed business operations in Russia. Concurrently, the war in Ukraine has impacted sales in EMEA and may continue to do so in the future.

The increasing focus on the risks and strategic importance of AI technologies has resulted in regulatory restrictions that target products and services capable of enabling or facilitating AI and may in the future result in additional restrictions impacting some or all of our product and service offerings.

Concerns regarding third-party use of AI for purposes contrary to local governmental interests, including concerns relating to the misuse of AI applications, models, and solutions, has resulted in and could in the future result in unilateral or multilateral restrictions on products that can be used for training, modifying, tuning, and deploying LLMs and other AI applications. Such restrictions have limited and could in the future limit the ability of downstream customers and users worldwide to acquire, deploy and use systems that include our products, software, and services, and negatively impact our business and financial results.

Such restrictions could include additional unilateral or multilateral export controls on certain products or technology, including but not limited to AI technologies. As geopolitical tensions have increased, semiconductors associated with AI, including GPUs and related products, are increasingly the focus of export control restrictions proposed by stakeholders in the U.S. and its allies. The United States has imposed unilateral worldwide controls restricting GPUs and associated products, and it is likely that additional unilateral or multilateral controls will be adopted. Such controls have been and may again be very broad in scope and application, prohibit us from exporting our products to any or all customers in one or more markets, and could negatively impact our manufacturing, testing and warehousing locations and options, or could impose other conditions that limit our ability to serve demand abroad and could negatively and materially impact our business, revenue and financial results. Export controls and other restrictions targeting GPUs and semiconductors associated with AI, which have been imposed and are likely to be more restrictive, would further limit our ability to export our technology, products, or services, creating a competitive disadvantage for us and negatively impacting our business.

and financial results. Export controls targeting GPUs and semiconductors associated with AI have subjected and may in the future subject downstream users of our products to restrictions on the use, resale, repair, or transfer of our products, negatively impacting our business and financial results. Controls could negatively impact our cost and/or ability to provide services such as NVDIA AI cloud services and could impact the cost and/or ability for our CSPs and customers to provide services to their end customers, even outside China.

Export controls have and could in the future disrupt our supply chain and distribution channels, negatively impacting our ability to serve demand, including in markets outside China and for our non-data center products. The possibility of additional export controls has negatively impacted and may in the future negatively impact demand for our products, benefiting competitors that offer alternatives less likely to be restricted by further controls. Repeated changes in the export control rules are likely to impose compliance burdens on our business and our customers, negatively and materially impacting our business.

Increasing use of economic sanctions and export controls has impacted and may in the future impact demand for our products or services, negatively impacting our business and financial results. Reduced demand due to export controls has and could in the future lead to excess inventory or cause us to incur related supply charges. Additional unilateral or multilateral controls are also likely to include deemed export control limitations that negatively impact the ability of our research and development teams to execute our roadmap or other objectives in a timely manner. Additional export restrictions may not only impact our ability to serve overseas markets, but also provoke responses from foreign governments, including China, that negatively impact our supply chain or our ability to provide our products and services to customers in all markets worldwide, which could also substantially reduce our revenue. Regulators in China have inquired about our sales and efforts to supply the China market and our fulfillment of the commitments we entered at the close of our Mellanox acquisition. On September 15, 2025, China's antitrust regulators published their preliminary finding that our compliance with applicable U.S. export controls, which required us to offer degraded products to the Chinese market, discriminated unfairly against customers in the China market and therefore violated the terms of China's approval of our Mellanox acquisition. If regulators conclude that we have failed to fulfill the terms of our Mellanox acquisition or we have violated any applicable law in China, we could be subject to financial penalties, restrictions on our ability to conduct our business, restrictions or other orders regarding our networking business, products, and services, or otherwise impact our operations in China, any of which could have a material and adverse impact on our business, operating results and financial condition.

Over the past three years, we have been subject to a series of shifting and expanding export control restrictions, impacting our ability to serve customers outside the United States.

In August 2022, the USG announced export restrictions and export licensing requirements targeting China's semiconductor and supercomputing industries. These restrictions impacted exports of certain chips, as well as software, hardware, equipment and technology used to develop, produce and manufacture certain chips to China (including Hong Kong and Macau) and Russia, and specifically impact our A100 and H100 integrated circuits, DGX or any other systems or boards which incorporate A100 or H100 integrated circuits.

In July 2023, the USG also informed us of an additional licensing requirement for a subset of A100 and H100 products destined to certain customers and other regions, including some countries in the Middle East.

In October 2023, the USG announced new and updated licensing requirements for exports to China and Country Groups D:1, D:4, and D:5 (including but not limited to, Saudi Arabia, the United Arab Emirates, and Vietnam, but excluding Israel) of our products exceeding certain performance thresholds, including, but not limited to, the A100, A800, H100, H800, L4, L40, L40S RTX 4090, GB200 NVL72, and B200. The licensing requirements also apply to the export of products exceeding certain performance thresholds to a party headquartered in, or with an ultimate parent headquartered in, Country Group D5, including China.

In April 2025, the USG informed us that it requires a license for export to China (including Hong Kong and Macau) and D:5 countries, or to companies headquartered or with an ultimate parent therein, of our H20 integrated circuits and any other circuits achieving the H20's memory bandwidth, interconnect bandwidth, or combination thereof. As a result of these requirements, we incurred a \$4.5 billion charge in the first quarter of fiscal year 2026 associated with H20 for excess inventory and purchase obligations, as the demand for H20 products diminished.

In August 2025, the USG granted licenses that would allow us to ship certain H20 products to certain China-based customers. We generated approximately \$60 million in H20 revenue under those licenses. USG officials expressed an expectation that the USG will receive 15% or more of the revenue generated from licensed sales of our products, but the USG did not publish a regulation codifying such requirement.

In February 2026, the USG granted a license that would allow us to ship small amounts of H200 products to specific China-based customers. To date, we have not generated any revenue under the H200 licensing program, and do not yet know whether any imports will be allowed into China. The license requires that the H200s go through an inspection process in the United States prior to any shipment to the customer. As a result, any H200 shipped under the new licensing program will be subject to a 25% tariff upon importation into the United States.

In the event that we are able to sell licensed products into the China market, we may not be able to pass along all or any of the tariff to our customers, and may be subject to litigation, increased costs, and a harmed competitive position.

The export controls applicable to China are complex and address a variety of parameters, including the total processing performance of a chip, the “performance density” of a chip, the interconnect bandwidth of a chip, and the memory bandwidth of a chip. Under the current rules and geopolitical landscape, we are unable to create and deliver a competitive product for China’s data center market that receives approval from both the USG and the Chinese government. As of the end of fiscal year 2026, we were effectively foreclosed from competing in China’s data center computing/compute market, and our effective foreclosure from the China market helped our competitors build larger developer and customer ecosystems to challenge us worldwide. Unless we are able to return with a product that meets the approval of both the USG and the Chinese government, our lost opportunity and the benefit to our competitors will have a material and adverse impact on our business, operating results, and financial condition.

In addition to controls targeting D:1, D:4 and D:5 countries, the USG has also imposed worldwide export controls impacting our products, and may impose additional controls in the future.

In January 2025, the USG published the AI Diffusion IFR in the Federal Register. The IFR would have imposed a worldwide licensing requirement on our data center products, such as our H200, GB200 and GB300. The AI Diffusion IFR would have divided the world into three tiers, relegating most countries to “Tier 2” status, and would have created a complex and burdensome scheme for licensing approvals.

In May 2025, the USG announced that it would rescind the AI Diffusion IFR and implement a replacement rule. The scope, timing, and requirements of the forthcoming rule remain uncertain. The replacement rule may impose new restrictions on our products or operations and/or add license requirements that could have a material impact on our business, operating results, and financial condition. For example, in October 2025, the Senate passed the “GAIN AI Act” in the NDAA. The GAIN AI Act would restrict the Trump Administration’s ability to adapt the Biden Administration’s export control rules, and could also allow private U.S. persons to review and overturn licensing and foreign policy decisions made by the Trump Administration.

Our competitive position has been harmed by export controls, and our competitive position and future results will be further harmed, over the long term, if the restrictions remain in place or are expanded in geographic, customer, or product scope, if customers purchase product from competitors, if customers develop their own internal solution, if we are unable to provide contractual warranty or other extended service obligations, if the USG does not grant licenses in a timely manner or denies licenses to significant customers or if we incur significant transition costs. The licensing process may not be resolved before significant business opportunities evaporate. Even if the USG grants any requested licenses, the licenses have already and may in the future be temporary, impose burdensome conditions regarding the installation, maintenance, and use of such products, or include financial or economic requirements that we or our customers or end users cannot or choose not to fulfill. The licensing requirements have already and may in the future benefit certain of our competitors, as the licensing process will make our pre-sale and post-sale technical support efforts more cumbersome and less certain and encourage customers in China, the Middle East, and other regions to pursue alternatives to our products, including semiconductor suppliers based in China, Europe, and Israel.

Given the increasing strategic importance of AI and rising geopolitical tensions, the USG has changed and may again change the export control rules at any time and further subject a wider range of our products to export restrictions and licensing requirements, negatively impacting our business and financial results. In the event of such change, we may be unable to sell our inventory of such products and may be unable to develop replacement products not subject to the licensing requirements.

For example, the USG already imposed license conditions that limit the ability of foreign firms to create and offer as a service large-scale GPU clusters, such as imposing license conditions on the use of products to be exported to certain countries, and may impose additional conditions such as requiring chip tracking and throttling mechanisms that could disable or impair GPUs if certain events, including unauthorized system configuration, use, or location, are detected. Such government mandates in chip designs could introduce system vulnerabilities and expose us to significant risk and potential liability, negatively impact demand for our products, and could have a material impact on our business, operating results, and financial condition. Even if not enacted into binding legislation, draft bills have impacted and may in the future negatively impact our business. For example, following U.S. legislative proposals calling for mandatory features in our chips, China’s government publicly questioned whether our H20 products have built-in vulnerabilities, discouraging customers from purchasing our products. We provided a public response explaining that our GPUs, including H20, do not include such built-in vulnerabilities, and will respond to any follow-up questions we receive.

Open-source foundation models are rapidly growing in popularity with developers worldwide. Any regulatory control or other restriction that limits our ability to provide products and services that support third-party applications and models, including applications built on foundation models originating in China such as DeepSeek, Qwen, or KIMMI, could have a material impact on our business, operating results, and financial condition.

The USG already imposed export controls restricting certain gaming GPUs, and if the USG expands such controls to restrict additional gaming products, it may disrupt a significant portion of our supply and distribution chain and

negatively impact sales of such products to markets outside China, including the U.S. and Europe. In addition, as the performance of the gaming GPUs increases over time, export controls may have a greater impact on our ability to compete in markets subject to those controls. Export controls may disrupt our supply and distribution chain for a substantial portion of our products, which are warehoused in and distributed from Hong Kong.

Export controls restricting our ability to sell data center GPUs may also negatively impact demand for our networking products used in servers containing our GPUs. The USG may also impose export controls on our networking products, such as high-speed network interconnects, to limit the ability of downstream parties to create large clusters for frontier model training.

Export controls have and are likely in the future to have a disproportionate impact on NVIDIA and may disadvantage us against certain of our competitors that sell chips that are outside the scope of such control. Export controls have already and may in the future encourage customers outside China and other impacted regions to “design-out” certain U.S. semiconductors from their products to reduce the compliance burden and risk, and to ensure that they are able to serve markets worldwide. Export controls have already encouraged and may in the future encourage overseas governments to request that our customers purchase from our competitors rather than NVIDIA or other U.S. firms, harming our business, market position, and financial results.

As a result, export controls have in the past and may in the future negatively impact demand for our products and services not only in China, but also in other markets, such as Europe, Latin America, and Southeast Asia. Export controls increase the risk of investing in U.S. advanced semiconductor products, because by the time a new product is ready for market, it may be subject to new unilateral export controls restricting its sale, resulting in excess inventory and purchase obligations as we recently experienced with the H20. At the same time, such controls may increase investment in foreign competitors, which would be less likely to be restricted by U.S. controls.

The increasingly complex export controls impose complex and burdensome compliance obligations on our partners, suppliers, and customers. While we seek to strictly comply with all applicable export control regulators, reports of diversion of controlled products, even when unsubstantiated and untrue, may negatively impact our business, relationships with partners and customers, and our reputation. Incorrect allegations that our compliance efforts satisfy the letter but not the “spirit” of the applicable regulations, as well as incorrect allegations that legitimate and appropriate business is using supposed “loopholes” in the export controls may negatively impact our business, relationships with partners and customers, and our reputation.

In addition to export controls, the USG may impose restrictions on the import and sale of products that incorporate technologies developed or manufactured in whole or in part in China. For example, the USG adopted “Connected Vehicle” restrictions on the import and sale of certain automotive products in the United States, which if adopted and interpreted broadly, could impact our ability to develop and supply solutions for our automotive customers. The USG is also considering restrictions that would limit our ability to support third-party applications and models built on open-source foundation models originating in China. Such restrictions, if implemented, would favor our foreign competitors and negatively impact our business.

Additionally, restrictions imposed by the Chinese government on the duration of gaming activities and access to games may adversely affect our Gaming revenue, and even if we are able to participate in the China data center compute market, increased oversight of digital platform companies may adversely affect our Data Center revenue. The Chinese government has encouraged customers to purchase from our China-based competitors and discouraged customers from purchasing, importing, or using our data center products, including any China-specific product designed to comply with U.S. export controls. As another example, an agency of the Chinese government announced an Action Plan that endorses new standards regarding the compute performance per watt and per memory bandwidth of accelerators used in new and renovated data centers in China. Although we are already effectively foreclosed from the China market by U.S. export controls, if those controls changed to allow us to return to the market, the Chinese government could modify or implement the Action Plan in a way that effectively prevents us from being able to design products to meet the new standard, which may restrict the ability of customers to use some of our data center products and may have a material and adverse impact on our business, operating results and financial condition. Further restrictions on our products or the products of our suppliers could negatively impact our business and financial results.

Finally, our business depends on our ability to receive consistent and reliable supply from our overseas partners, especially in Taiwan and South Korea. Any new restrictions that negatively impact our ability to receive supply of components, parts, or services from Taiwan and South Korea, would negatively impact our business and financial results.

Scrutiny from shareholders, regulators and others regarding our corporate sustainability practices could result in additional costs or risks and adversely impact our reputation and willingness of customers and suppliers to do business with us.

Certain shareholder advocacy groups, investment funds, shareholders and other market participants, customers and government regulators have focused on corporate sustainability practices and disclosures, including those associated with climate change and human rights. Stakeholders may not be satisfied with our corporate sustainability practices and goals or the speed of their adoption. Further, there are state-level initiatives in the U.S. that may differ from other

regulatory requirements or our various stakeholders' expectations. Additionally, our corporate sustainability practices, oversight of our practices or disclosure controls may not meet evolving shareholder, regulator or other industry stakeholder expectations, or we may fail to meet corporate sustainability disclosure or reporting standards or legal requirements. We could also incur additional costs and require additional resources to monitor, report, and comply with various corporate sustainability practices and legal requirements, choose not to conduct business with potential customers and suppliers, or discontinue or not expand business with existing customers and suppliers due to our policies. These factors and increased disclosure may negatively harm our brand, reputation and business activities or expose us to liability.

Issues relating to the responsible use of our technologies, including AI in our offerings, may result in reputational or financial harm and liability.

Concerns relating to the responsible use of new and evolving technologies, such as AI, in our products and services may result in reputational or financial harm and liability and may cause us to incur costs to resolve such issues. We are increasingly building AI capabilities and protections into many of our products and services, and we also offer stand-alone AI applications. AI poses emerging legal, social, and ethical issues and presents risks and challenges that could affect its adoption, and therefore our business. If we enable or offer solutions that draw controversy due to their perceived or actual impact on society, such as AI solutions that have unintended consequences, infringe copyright or rights of publicity, or are controversial because of their impact on human rights, privacy, employment or other social, economic or political issues, or if we are unable to implement effective internal policies and frameworks relating to the responsible development and use of AI models and systems offered through our sales channels, we may experience brand or reputational harm, competitive harm or legal liability. Leveraging AI capabilities to potentially improve our internal functions and operations may present further risks, costs, and challenges. Complying with multiple regulations from different jurisdictions related to AI may further increase our cost of doing business, may change the way that we operate in certain jurisdictions, and may impede our ability to offer certain products and services in certain jurisdictions if we are unable to comply with regulations. Compliance with existing and proposed government regulation of AI, including in jurisdictions such as the European Union, may further increase the cost of related research and development, and create additional reporting and/or transparency requirements. For example, regulation adopted in response to the European Union Code of Practice for General Purpose Artificial Intelligence could require us to notify the European Commission regarding details of some of our Trustworthy AI processes related to our risk framework. Furthermore, changes in AI-related regulation could disproportionately impact and disadvantage us and require us to change our business practices, which may negatively impact our financial results. Our failure to adequately address concerns and regulations relating to the responsible use of AI by us or others could undermine public confidence in AI and slow adoption of AI in our products and services or cause reputational or financial harm.

Actions to adequately protect our IP rights could result in substantial costs to us and our ability to compete could be harmed if we are unsuccessful or if we are prohibited from making or selling our products.

From time to time, we are involved in lawsuits or other legal proceedings alleging patent infringement or other IP rights violations by us, our employees or parties that we have agreed to indemnify. An unfavorable ruling could include significant damages, invalidation of one or more patents, indemnification of third parties, payment of lost profits, or injunctive relief. Claims that our products or processes infringe the IP rights of others, regardless of their merit, could cause us to incur significant costs to respond to, defend, and resolve such claims, and they may also divert the efforts and attention of management and technical personnel.

We may commence legal proceedings to protect our IP rights, which may increase our operating expenses. We could be subject to countersuits as a result. If infringement claims are made against us or our products are found to infringe a third party's IP, we or one of our indemnitees may have to seek a license to the third party's IP rights. If we or one of our indemnitees is unable to obtain such a license on acceptable terms or at all, we could be subject to substantial liabilities or have to suspend or discontinue the manufacture and sale of one or more of our products. We may also have to make royalty or other payments or cross license our technology. If these arrangements are not concluded on commercially reasonable terms, our business could be negatively impacted. Furthermore, the indemnification of a customer or other indemnitee may increase our operating expenses and negatively impact our operating results.

We rely on patents, trademarks, trade secrets, employee and third-party nondisclosure agreements, licensing arrangements and the laws of the countries in which we operate to protect our IP. Foreign laws may not protect our products or IP rights to the same extent as United States law. This makes the possibility of piracy of our technology and products more likely. The theft or unauthorized use or publication of our trade secrets and other confidential information could harm our competitive position and reduce acceptance of our products; as a result, the value of our investment in research and development, product development and marketing could be reduced. We also may face risks to our IP if our employees are hired by competitors. We continuously assess whether and where to seek formal protection for existing and new innovations and technologies but cannot be certain whether our applications for such protections will be approved, and, if approved, whether they will be enforceable.

We are subject to stringent and changing data privacy and security laws, rules, regulations and other obligations. These areas could damage our reputation, deter current and potential customers, affect our product design, or result in legal or regulatory proceedings and liability.

We process sensitive, confidential or personal data or information that is subject to privacy and security laws, regulations, industry standards, external and internal policies, contracts and other obligations that govern the processing of such data by us and on our behalf. Concerns about our practices or the ultimate use of our products and services with regard to the collection, use, retention, security or disclosure of personal information or other privacy-related matters, including for use in AI, even if unfounded, could damage our reputation and adversely affect our operating results. The theft, loss or misuse of personal data in our possession or by one of our partners could result in damage to our reputation, regulatory proceedings, disruption of our business activities or increased security or remediation costs and costs related to defending legal claims.

In the United States, federal, state and local authorities have enacted numerous data privacy and security laws, including for data breach notification, personal data privacy and consumer protection. Numerous U.S. states have enacted comprehensive privacy laws that impose certain obligations on covered businesses, including providing specific disclosures in privacy notices and affording residents with certain rights concerning their personal data. As applicable, such rights may include the right to access, correct, or delete certain personal data, and to opt-out of certain data processing activities, such as targeted advertising, profiling and automated decision-making. The exercise of these rights may impact our business and ability to provide our products and services. Certain states also impose stricter requirements for processing certain personal data, including sensitive information, such as conducting data privacy impact assessments. These state laws allow for statutory fines for noncompliance. For example, the California Consumer Privacy Act of 2018, as amended by the California Privacy Rights Act of 2020, or CPRA, or collectively the CCPA gives California residents the right to access, delete and opt-out of certain sharing of their personal information, and to receive detailed information about how it is used and shared. The CCPA provides for substantial fines for intentional violation and the law created a private right of action for certain data breaches. Similar laws are being considered in several other states, as well as at the federal and local levels. Additionally, several states and localities have enacted measures related to the use of AI and machine learning in products and services. If we become subject to additional data privacy laws, the risk of enforcement action against us could increase.

Worldwide regulatory authorities are also considering and have approved various legislative proposals concerning data protection. The European Union adopted the General Data Protection Regulation, or GDPR, and the United Kingdom similarly adopted the U.K. GDPR, governing the strict handling of personal data of persons within the European Economic Area, or EEA, and the United Kingdom, respectively, including its use and protection and the ability of persons whose data is stored to access, correct, and delete such data about themselves. If we are found not to comply, we could be subject to penalties of up to €20 million or 4% of worldwide revenue, whichever is greater, and classes of individuals or consumer protection organizations may initiate litigation related to our processing of their personal data. Furthermore, the EU AI Act and similar legislation could impose onerous obligations that may disproportionately impact and disadvantage us and require us to change our business practices. Additionally, Europe's Network and Information Security Directive, or NIS2, regulates resilience and incident response capabilities of entities operating in a number of sectors, including the digital infrastructure sector. Non-compliance with NIS2 may lead to administrative fines of a maximum of 10 million Euros or up to 2% of the total worldwide revenue of the preceding fiscal year.

In the ordinary course of business, we transfer personal data from Europe, China, and other jurisdictions to the United States or other countries. Certain jurisdictions have enacted data localization laws and cross-border personal data transfer laws. For example, the GDPR governs the transfer of personal data to countries outside of the EEA. The European Commission released a set of "Standard Contractual Clauses" designed for entities to validly transfer personal data out of the EEA to jurisdictions that the European Commission has not found to provide an adequate level of protection, including the United States. Additionally, the U.K.'s International Data Transfer Agreement / Addendum, as well as the EU-U.S. Data Privacy Framework and the U.K. extension thereto (which allows for transfers to relevant U.S.-based organizations who self-certify compliance and participate in the Framework) are mechanisms that may be used to transfer personal data from the EEA and U.K. to the United States. However, these mechanisms are subject to legal challenges, and there is no assurance that we can satisfy or rely on these measures to lawfully transfer personal data to the United States. Other jurisdictions have enacted or are considering similar cross-border personal data transfer laws and local personal data residency laws, any of which would increase the cost and complexity of doing business and could result in fines from regulators. For example, China's law imposes various requirements relating to data processing and data localization. Data broadly defined as important under China's law, including personal data, may not be transferable outside of China without prior assessment and approval by the Cyberspace Administration of China, or CAC. Compliance with these requirements, including CAC assessments and any deemed failures of such assessments, could cause us to incur liability, prevent us from using data collected in China or impact our ability to transfer data outside of China. The inability to import personal data to the United States could significantly and negatively impact our business operations, limit our ability to collaborate with parties that are subject to European, China and other data privacy and security laws, or require us to increase our personal data processing capabilities in Europe and/or elsewhere at significant expense. Some European regulators have prevented companies from transferring personal data out of Europe for allegedly violating the GDPR's cross-border data transfer limitations, which could negatively impact our business.

We are also bound by certain contractual obligations related to data privacy and security, and our efforts to comply with such obligations may not be successful or may be deemed to be non-compliant. For example, certain privacy laws, such as the GDPR and the CCPA, require our customers to impose specific contractual restrictions on their service providers. We sometimes host personal data in collaboration with our customers, and if a breach exposed or altered that personal data, it could harm those customer relationships and subject us to litigation, regulatory action, or fines. We publish privacy policies, marketing materials and other statements, such as compliance with certain certifications or self-regulatory principles, regarding data privacy and security. Regulators in the U.S. are increasingly scrutinizing these statements, and if these policies, materials or statements are found to be deficient, lacking in transparency, deceptive, unfair or misrepresentative of our practices, we may be subject to investigation, enforcement actions by regulators or other adverse consequences.

Data protection laws around the world are quickly changing and may be interpreted and applied in an increasingly stringent fashion and in a manner that is inconsistent with our data practices. These obligations may affect our product design and necessitate changes to our information technologies, systems and practices and to those of any third parties that process personal data on our behalf. Despite our efforts, we or third parties we rely upon may fail to comply with such obligations. If we fail, or are perceived to have failed, to address or comply with data privacy and security obligations, we could face significant consequences, including but not limited to, government enforcement actions, litigation, additional reporting requirements and/or oversight, bans on processing personal data, and orders to destroy or not use personal data. Any of these events could have a material adverse effect on our reputation, business, or financial condition.

We may have exposure to additional tax liabilities and our operating results may be adversely impacted by changes in tax laws, higher than expected tax rates and other tax-related factors.

We are subject to complex income tax laws and regulations, as well as non-income-based taxes, in various jurisdictions. Significant judgment is required in determining our worldwide provision for income taxes and other tax liabilities. We are regularly under audit by tax authorities in different jurisdictions. Although we believe our tax estimates are reasonable, any adverse outcome could increase our worldwide effective tax rate, increase the amount of non-income taxes imposed on our business, and harm our financial position, results of operations, net income, and cash flows.

Further, changes in tax laws or their interpretation by tax authorities in the U.S. or foreign jurisdictions could increase our future tax liability or cause other adverse tax impacts, which may materially impact our results of operations, or the way we conduct our business. Most of our income is taxable in the U.S., with a significant portion qualifying for preferential treatment as foreign-derived deduction eligible income, or FDDEI. If U.S. tax rates increase or the FDDEI deduction is reduced, our provision for income taxes, results of operations, net income, and cash flows would be adversely affected. In addition, our tax obligations and effective tax rate in the jurisdictions in which we conduct business could increase as a result of international tax developments, including the implementation of the Two-Pillar framework led by the Organization for Economic Cooperation and Development, or OECD, which involves the reallocation of taxing rights in respect of certain multinational enterprises above a fixed profit margin to the jurisdictions in which they carry on business (referred to as Pillar One), and imposes a minimum effective corporate tax rate (referred to as Pillar Two). A number of countries in which we conduct business have enacted, or are in the process of enacting, elements of the Pillar Two rules, including the recently released "side-by-side" framework, which provides certain additional safe harbors and coordination mechanisms. Any such tax laws, or changes in any such tax laws, including those related to the side-by-side framework, may increase tax uncertainty and compliance costs and adversely affect our provision for income taxes, cash tax payments, results of operations, and financial condition.

Our future effective tax rate may also be affected by a variety of factors, including changes in our business or statutory rates, the mix of earnings in countries with differing statutory tax rates, available tax incentives, credits and deductions, the expiration of statutes of limitations, changes in accounting principles, adjustments to income taxes upon finalization of tax returns, increases in expenses not deductible for tax purposes, the estimates of our deferred tax assets and liabilities and deferred tax asset valuation allowances, changing interpretation of existing laws or regulations, the impact of accounting for business combinations, as well as changes in the domestic or international organization of our business and structure. Furthermore, the tax effects of accounting for stock-based compensation and volatility in our stock price may significantly impact our effective tax rate in the period in which they occur. A decline in our stock price may result in reduced future tax benefits from stock-based compensation, increase our effective tax rate, and adversely affect our financial results.

Our business is exposed to the burden and risks associated with litigation, investigations and regulatory proceedings.

We currently and will likely continue to face legal, administrative and regulatory proceedings, claims, demands and/or investigations involving shareholder, consumer, competition, intellectual property and/or other issues relating to our business. For example, we are defending a securities class action lawsuit from multiple shareholders asserting claims that we and certain of our officers made false and/or misleading statements related to channel inventory and the impact of cryptocurrency mining on GPU demand in 2017 and 2018. Litigation and regulatory proceedings are inherently uncertain, and adverse rulings could occur, including monetary damages or fines, or an injunction stopping us from manufacturing or selling certain products, engaging in certain business practices, or requiring other remedies, such as compulsory licensing of patents. An unfavorable outcome or settlement may result in a material adverse impact. Regardless of the outcome, litigation can be costly, time-consuming, and disruptive to our operations.

Delaware law and our certificate of incorporation, bylaws and agreement with Microsoft could delay or prevent a change in control.

The anti-takeover provisions of the Delaware General Corporation Law may discourage, delay, or prevent a change in control. Provisions in our certificate of incorporation and bylaws could make it more difficult for a third party to acquire a majority of our outstanding stock. These provisions include the ability of our Board of Directors to create and issue preferred stock, change the number of directors, and to make, amend or repeal our bylaws without prior shareholder approval; the inability of our shareholders to act by written consent; advance notice requirements for director nominations and shareholder proposals; and super-majority voting requirement to amend some provisions in our certificate of incorporation and bylaws. Under our agreement with Microsoft for the Xbox, if someone makes an offer to purchase at least 30% of our outstanding common stock, Microsoft may have first and last rights of refusal to purchase the stock. These provisions could delay or prevent a change in control of NMDIA, discourage proxy contests, and make it more difficult for shareholders to elect directors of their choosing and to cause us to take other corporate actions they desire.

Item 1B. Unresolved Staff Comments

None.

Item 1C. Cybersecurity

Risk management and strategy

We have in place certain infrastructure, systems, policies, and procedures that are designed to proactively prevent or reduce the impact of, and reactively address circumstances that arise when, events such as a cybersecurity incident occur. These include processes for assessing, identifying, and managing material risks from cybersecurity threats. Our information security management programs generally follow certain processes outlined in frameworks such as the ISO 27001 international standard for information security management and we evaluate and evolve our security measures as appropriate. We consult with external parties, such as cybersecurity firms and risk management and governance experts, on risk management and strategy.

Identifying, assessing, and managing cybersecurity risk is integrated into our overall risk management systems and processes, and we have in place cybersecurity and data privacy training and policies designed to (a) respond to new requirements in global privacy and cybersecurity laws and (b) prevent, detect, respond to, mitigate and recover from identified and significant cybersecurity threats.

We also have a vendor risk assessment process consisting of, depending on the nature and sensitivity of the supplier and data they process on our behalf, the distribution and review of supplier questionnaires designed to help us evaluate cybersecurity risks that we may encounter when working with third parties that have access to confidential and other sensitive company information. We take steps to review that such vendors have implemented data privacy and security controls that help mitigate the cybersecurity risks associated with these vendors, depending on the nature and sensitivity of the supplier and data they process on our behalf. We routinely assess our high-risk suppliers' conformance to industry standards (e.g., ISO 27001, ISO 28001, and C-TPAT), and we evaluate them for additional information, product, and physical security requirements.

Refer to "Item 1A. Risk factors" in this annual report on Form 10-K for additional information about cybersecurity-related risks.

Governance

Information security matters, including managing and assessing risks from cybersecurity threats, remain under the oversight of the Company's Board of Directors, or the Board. The Audit Committee of the Board, or the Audit Committee, also reviews the adequacy and effectiveness of the Company's information security policies and practices and the internal controls regarding information security risks. The Audit Committee receives regular information security updates from management, including our Chief Security Officer and members of our security team. The Board also receives annual reports on information security matters from our Chief Security Officer and members of our security team.

Our security efforts are managed by a team of executive cybersecurity, IT, engineering, operations, and legal professionals. We have established a cross-functional leadership team, consisting of executive-level leaders, that meets regularly to review cybersecurity matters and evaluate emerging threats. With oversight and guidance provided by the cross-functional leadership team, our information security teams refine our practices to address emerging security risks and changes in regulations. Our executive-level leadership team also participates in cybersecurity incident response efforts by engaging with the incident response team and helping direct the company's response to and assessment of certain cybersecurity incidents.

We have designated a Chief Security Officer, reporting to our Senior Vice President of Software Engineering, to oversee the identification, assessment, and management of material cybersecurity risks. Our Chief Security Officer's cybersecurity expertise includes over 18 years of combined government and private sector assignments.

Item 2. Properties

Our headquarters is in Santa Clara, California. We own and lease approximately 3 million square feet of office and building space for our corporate headquarters. In addition, we lease data center space in Santa Clara, California. We also own and lease facilities for data centers, research and development, and/or sales and administrative purposes throughout the U.S. and in various international locations, primarily in China, India, Israel, and Taiwan. We believe our existing facilities, both owned and leased, are in good condition and suitable for the conduct of our business. We do not identify or allocate assets by operating segment. For additional information regarding obligations under leases, refer to Note 17 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K, which information is hereby incorporated by reference.

Item 3. Legal Proceedings

Please see Note 12 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for a discussion of our legal proceedings.

Item 4. Mine Safety Disclosures

Not applicable.

Part II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Our common stock is traded on the Nasdaq Global Select Market under the symbol NVDA. Public trading of our common stock began on January 22, 1999. Prior to that, there was no public market for our common stock. As of February 20, 2026, we had approximately 1,226 registered shareholders, not including those shares held in street or nominee name.

In May 2024, we announced a ten-for-one stock split, or the Stock Split, of our issued common stock, which was effected through the filing of an amendment to the Company's Restated Certificate of Incorporation, or the Amendment, with the Secretary of the State of Delaware. In June 2024, the Company filed the Amendment to effect the Stock Split and proportionately increased the number of shares of the Company's authorized common stock from 8.0 billion to 80.0 billion. Shareholders of record at the close of market on June 6, 2024 received nine additional shares of common stock, distributed after the close of market on June 7, 2024. All share, equity award and per share amounts presented herein have been retrospectively adjusted to reflect the Stock Split.

Issuer Purchases of Equity Securities

On August 26, 2025, our Board of Directors approved an additional \$60.0 billion in share repurchase authorization, without expiration. In fiscal year 2026, we repurchased 282 million shares of our common stock for \$40.4 billion. As of January 25, 2026, we were authorized, subject to certain specifications, to repurchase up to \$58.5 billion of our common stock.

The repurchases can be made in the open market, in privately negotiated transactions, pursuant to a Rule 10b5-1 trading plan or in structured share repurchase agreements in compliance with Rule 10b-18 of the Exchange Act, subject to market conditions, applicable legal requirements, and other factors. Our share repurchase program may be suspended at any time at our discretion.

In fiscal year 2026, we paid cash dividends to our shareholders of \$974 million. The payment of future cash dividends is subject to our Board of Directors' continuing determination that the declaration of dividends is in the best interests of our shareholders.

The following table presents details of our share repurchase transactions during the fourth quarter of fiscal year 2026:

Period	Total Number of Shares Purchased (In millions)	Average Price Paid per Share (1)	Total Number of Shares Purchased as Part of Publicly Announced Program (In millions)	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Program (In billions)
October 27, 2025 - November 23, 2025	5.6	\$ 198.89	5.6	\$ 61.1
November 24, 2025 - December 21, 2025	6.6	\$ 179.41	6.6	\$ 59.9
December 22, 2025 - January 25, 2026	7.3	\$ 186.52	7.3	\$ 58.5
Total	19.5		19.5	

(1) Average price paid per share includes broker commissions, but excludes our liability under the 1% excise tax on the net amount of our share repurchases required by the Inflation Reduction Act of 2022.

From January 26, 2026 through February 20, 2026, we repurchased 8 million shares for \$1.5 billion pursuant to a pre-established trading plan.

Restricted Stock Unit Share Withholding

We withhold shares of our common stock associated with net share settlements to cover tax withholding obligations of awards under our employee equity incentive program. During fiscal year 2026, we withheld approximately 51 million shares for a total value of \$7.9 billion through net share settlements. Refer to Note 3 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for further discussion regarding our equity incentive plans.

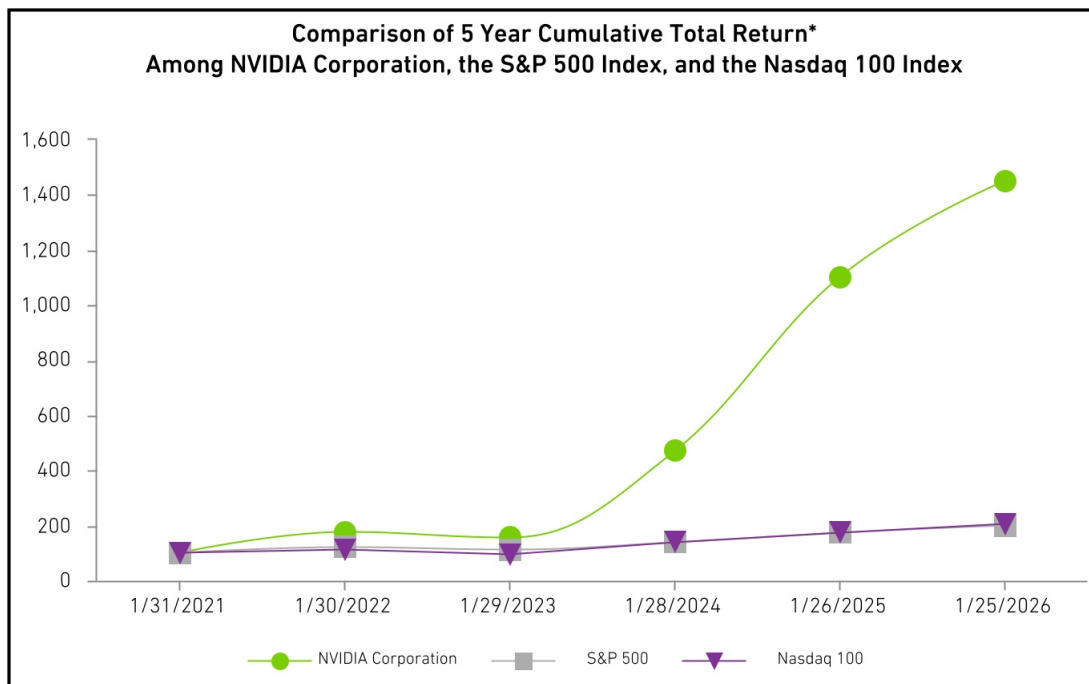

Recent Sales of Unregistered Securities and Use of Proceeds

On December 15, 2025, we acquired a company and issued to a key employee a total of 174,676 shares of our common stock, valued at approximately \$31 million based on our closing stock price on the issuance date.

The above securities were issued in a transaction not involving a public offering pursuant to an exemption from registration set forth in Section 4(a)(2) of the Securities Act (and Regulation D or Regulation S promulgated thereunder).

Stock Performance Graphs

The following graph compares the cumulative total shareholder return for our common stock, the S&P 500 Index, and the Nasdaq 100 Index for the five years ended January 25, 2026. The graph assumes that \$100 was invested on January 31, 2021 in our common stock and in each of the S&P 500 Index and the Nasdaq 100 Index. Our common stock is a component of each of the presented indices. Total return assumes reinvestment of dividends in each of the indices indicated. Total return is based on historical results and is not intended to indicate future performance.

*\$100 invested on 1/31/2021 in stock and in indices, including reinvestment of dividends.

	1/31/2021	1/30/2022	1/29/2023	1/28/2024	1/26/2025	1/25/2026
NVIDIA Corporation	\$ 100.00	\$ 175.98	\$ 470.88	\$ 1,100.68	\$ 1,448.75	\$ 1,448.75
S&P 500	\$ 100.00	\$ 121.00	\$ 137.98	\$ 174.50	\$ 200.33	\$ 200.33
Nasdaq 100	\$ 100.00	\$ 112.60	\$ 138.07	\$ 173.95	\$ 206.01	\$ 206.01

Item 6. [Reserved]

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with "Item 1A Risk Factors," our Consolidated Financial Statements and related Notes thereto, as well as other cautionary statements and risks described elsewhere in this Annual Report on Form 10-K, before deciding to purchase, hold, or sell shares of our common stock.

Overview

Our Company and Our Businesses

NVIDIA pioneered accelerated computing to help solve the most challenging computational problems. Since our original focus on PC graphics, we have expanded to several other large and important computationally intensive fields. Fueled by the sustained demand for exceptional 3D graphics and the scale of the gaming market, NVIDIA has leveraged its GPU architecture to create platforms for scientific computing, AI, data science, autonomous vehicles, robotics, and digital twin applications. NVIDIA is now a data center scale AI infrastructure company reshaping all industries.

Our two operating segments are "Compute & Networking" and "Graphics." Refer to Note 16 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

Headquartered in Santa Clara, California, NVIDIA was incorporated in California in April 1993 and reincorporated in Delaware in April 1998.

Recent Developments, Future Objectives and Challenges

Revenue growth in fiscal year 2026 was driven by data center compute and networking platforms for accelerated computing and AI solutions. Our Blackwell architectures represented the majority of our Data Center revenue.

The availability of data centers, energy, and capital to support the buildout of NVIDIA AI infrastructure by our customers and partners is crucial, and any shortage of these or other necessary resources could impact our future revenue and financial performance. Expanding energy capacity to meet demand is a complex, multi-year process that involves significant regulatory, technical, and construction challenges. In addition, access to capital can be particularly constrained for less-capitalized companies, which may face difficulties securing financing for large-scale infrastructure projects. These limitations could delay customer and partner deployments or reduce the scale of accelerated computing and AI adoption.

We continue to execute Data Center compute product introductions, bringing new advanced architectures on a one-year product cadence, including our Rubin platform. We began shipping production units of our new Blackwell Ultra platforms including GB300 in the second quarter of fiscal year 2026. The complexity of our product transitions and sophisticated system configurations has and may in the future cause delays in production and create challenges in managing supply and demand. This could further result in revenue volatility, quality issues, increased inventory provisions, decreases in product yields and higher material costs, and/or increased warranty costs. Customers may postpone purchasing new architectures or may adopt new technologies more gradually than anticipated, affecting our revenue timing and supply chain expenses.

In April 2025, the USG informed us that a license is required for exports of our H20 product into the China market. As a result of these requirements, we incurred a \$4.5 billion charge in the first quarter of fiscal year 2026 associated with H20 for excess inventory and purchase obligations, as the demand for H20 diminished. In August 2025, the USG granted licenses that would allow us to ship certain H20 products to certain China-based customers. We generated approximately \$60 million in H20 revenue under those licenses.

In February 2026, the USG granted a license that would allow us to ship small amounts of H200 products to specific China-based customers. To date, we have not generated any revenue under the H200 licensing program, and do not yet know whether any imports will be allowed into China. The license requires that the H200s go through an inspection process in the United States prior to any shipment to the customer. As a result, any H200 shipped under the new licensing program will be subject to a 25% tariff upon importation into the United States.

The recent rise in high-quality open-source foundation models is making advanced AI capabilities broadly accessible. Open-source AI is dependent on developer adoption and if deployed on our competitors' platforms, it could reduce demand for our products and services.

While currently our supply chain is mainly concentrated in Asia, we are expanding into the U.S. and Latin America. These moves are expected to strengthen our supply chain, add resiliency and redundancy, and meet the growing demand for AI infrastructure. Our ability to increase manufacturing capabilities will depend on the local region's manufacturing ecosystem's capacity to ramp production supply to the required volume and on a timely basis.

We have made, and expect to continue making, investments that support our technology roadmap and the broader AI ecosystem. In fiscal year 2026, we made the following investments:

- We invested \$17.5 billion in private companies and infrastructure funds, primarily to support early-stage startups. These investments include AI model makers that purchase our products directly or through CSPs. Many of these investments are illiquid and non-marketable. The related early-stage startups may not become profitable in the near term, or at all, and there can be no assurance that we will realize a return on our investments.
- We made investments in publicly-held equity securities where the value may fluctuate significantly due to changes in stock prices and could adversely affect our financial results.
- To support the build-out of complex datacenter infrastructures, we enter into commercial arrangements, including guarantees with partners. We provided \$3.5 billion in land, power, and shell guarantees to early-stage companies, generally over multi-year periods. If the escrow and the partners' operating activities are not sufficient to cover an event of default under these guarantees, we may elect to assume the underlying leases for internal use or sublease them to third parties.

Macroeconomic factors, including tariffs, inflation, interest rate changes, capital market volatility, global supply chain constraints, and global economic and geopolitical developments, have direct and indirect impacts on our results of operations, particularly demand for our products. While difficult to isolate and quantify, these macroeconomic factors impact our supply chain and manufacturing costs, employee wages, costs for capital equipment, the value of our investments, revenue and competitive position. Our product and solution pricing generally does not fluctuate with short-term changes in our costs. Within our supply chain, we continuously manage product availability and costs with our vendors.

Refer to "Item 1A. Risk Factors – Risks Related to Regulatory, Legal, Our Stock and Other Matters" for a further discussion of the potential impact of these factors on our business.

Fiscal Year 2026 Summary

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Change
	<i>(\$ in millions, except per share data)</i>		
Revenue	\$ 215,938	\$ 130,497	Up 65%
Gross margin	71.1 %	75.0 %	-3.9 pts
Operating expenses	\$ 23,076	\$ 16,405	Up 41%
Operating income	\$ 130,387	\$ 81,453	Up 60%
Net income	\$ 120,067	\$ 72,880	Up 65%
Net income per diluted share	\$ 4.90	\$ 2.94	Up 67%

Revenue for fiscal year 2026 was \$215.9 billion, up 65% from a year ago.

Data Center revenue for fiscal year 2026 was up 68% from a year ago. The strong year-on-year growth was driven by the major platform shifts – accelerated computing and AI.

Gaming revenue for fiscal year 2026 was up 41% from a year ago, driven by strong Blackwell demand. We expect supply constraints to be a headwind to Gaming in the first quarter of fiscal 2027 and beyond.

Professional Visualization revenue for fiscal year 2026 was up 70% from a year ago, driven by exceptional demand for Blackwell as well as the launch of our new DGX Spark.

Automotive revenue for fiscal year 2026 was up 39% from a year ago, driven by continued adoption of our self-driving platforms.

Gross margin decreased in fiscal year 2026 as our business model transitioned from offering Hopper HGX systems to Blackwell full-scale datacenter solutions. The gross margin decrease was also impacted by a \$4.5 billion charge associated with H2O excess inventory and purchase obligations.

Operating expenses for fiscal year 2026 were up 41% from a year ago, driven by higher compensation and benefits expenses due to employee growth and compute and infrastructure costs.

Critical Accounting Estimates

Our consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States, or U.S. GAAP. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenue, cost of revenue, expenses and related disclosure of contingencies. Critical accounting estimates are those estimates that involve a significant level of estimation uncertainty and could have a material impact on our financial condition or results of operations. We have critical accounting estimates in the areas of inventories, income taxes, non-marketable equity securities, and revenue recognition. Refer to Note 1 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for a summary of significant accounting policies.

Inventories

We charge cost of sales for inventory provisions to write-down our inventory to the lower of cost or net realizable value or for obsolete or excess inventory, and for excess product purchase commitments. Most of our inventory provisions relate to excess quantities of products or components, based on our inventory levels and future product purchase commitments compared to assumptions about future demand and market conditions, which requires management judgment.

Situations that may result in excess or obsolete inventory or excess product purchase commitments include changes in business and economic conditions, changes in market conditions, sudden and significant decreases in demand for our products, including potential cancellation or deferral of customer purchase orders, inventory obsolescence because of changing technology and customer requirements, new product introductions resulting in less demand for existing products or inconsistent spikes in demand, failure to estimate customer demand properly, ordering in advance of historical lead-times, government regulations and the impact of changes in future demand, or increase in demand for competitive products, including competitive actions.

The net effect on our gross margin from inventory provisions and sales of items previously written down was an unfavorable impact of 2.6% in fiscal year 2026 and 2.3% in fiscal year 2025. Our inventory and capacity purchase commitments are based on forecasts of future customer demand and consider our third-party manufacturers' lead times and constraints. Our manufacturing lead times can be and have been long, and in some cases, extended beyond twelve months for some products. We may place non-cancellable inventory orders for certain product components in advance of our historical lead times, pay premiums and provide deposits to secure future supply and capacity. We also adjust to other market factors, such as product offerings and pricing actions by our competitors, new product transitions, and macroeconomic conditions - all of which may impact demand for our products.

Refer to the Gross Profit and Gross Margin discussion below in this Management's Discussion and Analysis for further discussion.

Income Taxes

We are subject to income taxes in the U.S. and foreign jurisdictions. Our calculation of deferred tax assets and liabilities is based on certain estimates and judgments and involves dealing with uncertainties in the application of complex tax laws. Our estimates of deferred tax assets and liabilities may change based, in part, on added certainty or finality to an anticipated outcome, changes in accounting standards or tax laws in the U.S. or foreign jurisdictions where we operate, or changes in other facts or circumstances. In addition, we recognize liabilities for potential U.S. and foreign income tax contingencies based on our estimate of whether, and the extent to which, additional taxes may be due. If we determine that payment of these amounts is unnecessary or if the recorded tax liability is less than our current assessment, we may be required to recognize an income tax benefit or additional income tax expense in our financial statements accordingly.

We record a valuation allowance to reduce deferred tax assets to the amount that is believed more likely than not to be realized based on all available evidence. To the extent realization of the deferred tax assets becomes more-likely-than-not, we would recognize such deferred tax assets as income tax benefits during the period.

We recognize the benefit from a tax position only if it is more-likely-than-not that the position would be sustained upon audit based solely on the technical merits of the tax position. Our policy is to include interest and penalties related to unrecognized tax benefits as a component of income tax expense.

Non-Marketable Equity Securities

Non-marketable equity securities consist of investments in private companies without readily determinable fair values. They are measured at cost minus impairment, if any, and are adjusted for observable price changes in orderly transactions for a similar investment in the same issuer (the measurement alternative). These adjustments may require use of unobservable inputs.

We assess impairment quarterly based on qualitative and quantitative factors, including the investee's operating performance and market trends.

Revenue Recognition

Revenue Allowances

For products sold with a right of return, we record a reduction to revenue by establishing a sales return allowance for estimated product returns at the time revenue is recognized, based primarily on historical return rates. However, if product returns for a fiscal period are anticipated to exceed historical return rates, we may determine that additional sales return allowances are required to reflect our estimated exposure for product returns. Return rights for certain stocking distributors for specific products are contractually limited based on a percentage of prior quarter shipments. For shipments to other customers, we do not allow returns, although we may approve returns for credit or refund based on applicable facts and circumstances.

We account for customer programs, which involve rebates and marketing development funds, or MDFs, as a reduction in revenue and accrue for such programs based on the amount we expect to be claimed by customers. Certain customer programs include distributor price incentives or other channel programs for specific products and customer classes which require judgment as to whether the applicable incentives will be attained. Estimates for customer program accruals include a combination of historical attainment and claim rates and may be adjusted based on relevant internal and external factors.

Contracts with Multiple Performance Obligations

Our contracts may contain more than one performance obligation. Judgment is required in determining whether each performance obligation within a customer contract is distinct. Except for License and Development Arrangements, NVIDIA products and services function on a standalone basis and do not require a significant amount of integration or interdependency. Therefore, multiple performance obligations contained within a customer contract are considered distinct and are not combined for revenue recognition purposes.

We allocate the total transaction price to each distinct performance obligation in an arrangement with multiple performance obligations on a relative standalone selling price basis. In most cases, we can establish standalone selling price based on directly observable prices of products or services sold separately in comparable circumstances to similar customers. If standalone selling price is not directly observable, such as when we do not sell a product or service separately, we determine standalone selling price based on market data and other observable inputs.

Results of Operations

A discussion regarding our financial condition and results of operations for fiscal year 2026 compared to fiscal year 2025 is presented below. A discussion regarding our financial condition and results of operations for fiscal year 2025 compared to fiscal year 2024 can be found under Item 7 in our Annual Report on Form 10-K for the fiscal year ended January 26, 2025, filed with the SEC on February 26, 2025, which is available free of charge on the SEC's website at <http://www.sec.gov> and at our investor relations website, <http://investor.nvidia.com>.

The following table sets forth, for the periods indicated, certain items in our Consolidated Statements of Income expressed as a percentage of revenue.

	Year Ended	
	Jan 25, 2026	Jan 26, 2025
Revenue	100.0 %	100.0 %
Cost of revenue	28.9	25.0
Gross profit	71.1	75.0
Operating expenses		
Research and development	8.6	9.9
Sales, general and administrative	2.1	2.7
Total operating expenses	10.7	12.6
Operating income	60.4	62.4
Interest income	1.1	1.4
Interest expense	(0.1)	(0.2)
Other income, net	4.2	0.8
Total other income, net	5.2	2.0
Income before income tax	65.5	64.4
Income tax expense	9.9	8.6
Net income	55.6 %	55.8 %

Reportable Segments

Revenue by Reportable Segments

	Year Ended			
	Jan 25, 2026	Jan 26, 2025	\$ Change	% Change
	(\$ in millions)			
Compute & Networking	\$ 193,479	\$ 116,193	\$ 77,286	67 %
Graphics	22,459	14,304	8,155	57 %
Total	\$ 215,938	\$ 130,497	\$ 85,441	65 %

Operating Income by Reportable Segments

	Year Ended			
	Jan 25, 2026	Jan 26, 2025	\$ Change	% Change
	(\$ in millions)			
Compute & Networking	\$ 130,141	\$ 82,875	\$ 47,266	57 %
Graphics	9,156	5,085	4,071	80 %
Total	\$ 139,297	\$ 87,960	\$ 51,337	58 %

Compute & Networking revenue – The year over year increase was driven by the major platform shifts – accelerated computing and AI. Revenue from Data Center computing grew 59% driven by demand for our Blackwell computing platform. Revenue from Data Center networking grew 142% driven by the introduction and continued ramp of NVLink compute fabric for GB200 and GB300 systems and the growth of Ethernet and InfiniBand platforms.

Graphics revenue – The year over year increase was driven by sales of our Blackwell architecture.

Reportable segment operating income – The year over year increase in Compute & Networking segment operating income was driven by growth in revenue, partially offset by a \$4.5 billion charge associated with H2O excess inventory and purchase obligations in the first quarter of fiscal year 2026. The year over year increase in Graphics segment operating income was driven by the growth in revenue.

Concentration of Revenue

We refer to customers who purchase products directly from NVIDIA as direct customers, such as AIBs, distributors, ODMs, OEMs, CSPs, AI model makers, and system integrators. Certain direct customers may use either internal resources or third-party system integrators to complete their build. We refer to indirect customers as those who purchase products through our direct customers; indirect customers include CSPs, Neocloud builders, AI model makers, enterprises, and public sector entities. Our revenue is concentrated among a limited number of direct and indirect customers and this trend may continue.

Direct Customers – For fiscal year 2026, sales to one direct customer represented 22% of total revenue and sales to another direct customer represented 14% of total revenue, all of which were primarily attributable to the Compute & Networking segment.

For fiscal year 2025, sales to one direct customer represented 12% of total revenue and sales to two direct customers each represented 11% of total revenue, all of which were primarily attributable to the Compute & Networking segment.

For fiscal year 2024, sales to one direct customer represented 13% of total revenue, and were primarily attributable to the Compute & Networking segment.

Indirect Customers – Indirect customer revenue is an estimation based upon multiple factors including customer purchase order information, product specifications, internal sales data, and other sources. Indirect customers primarily purchase our products through system integrators and distributors. We generate a significant amount of our revenue from a limited number of indirect customers, some individually representing 10% or more of our revenue. Certain companies purchase cloud and related services through various direct and indirect customers. We estimate that one AI research and deployment company contributed to a meaningful amount of our revenue purchasing cloud services from our customers in fiscal year 2026.

Revenue by geographic region is designated based on the location of the headquarters of direct customers. The end customer and shipping location may be different from our customers' headquarters location. Revenue from sales to customers headquartered outside of the United States accounted for 31% and 41% of total revenue for fiscal years 2026 and 2025, respectively.

Gross Profit and Gross Margin

Gross profit consists of total net revenue less cost of revenue. Cost of revenue consists of the cost of semiconductors, including wafer fabrication, assembly, testing and packaging, board and device costs, manufacturing support costs, including labor and overhead associated with such purchases, final test yield fallout, inventory and warranty provisions, memory and component costs, tariffs, and shipping costs. Cost of revenue also includes acquisition-related intangible amortization expense, costs for license and development and service arrangements, IP-related costs, and stock-based compensation related to personnel associated with manufacturing operations.

Gross margins decreased to 71.1% in fiscal year 2026 from 75.0% in fiscal year 2025 as our business model transitioned from offering Hopper HGX systems to Blackwell full-scale datacenter solutions and a \$4.5 billion charge associated with H2O excess inventory and purchase obligations in the first quarter of fiscal year 2026.

Provisions for inventory and excess inventory purchase obligations totaled \$7.2 billion and \$3.7 billion for fiscal years 2026 and 2025, respectively, including \$4.5 billion associated with H2O excess inventory and purchase obligations for the first quarter of fiscal year 2026. Sales of previously reserved inventory and settlements of excess inventory purchase obligations resulted in a provision release of \$1.5 billion and \$689 million for fiscal years 2026 and 2025, respectively. The net effect on our gross margin was an unfavorable impact of 2.6% and 2.3% in fiscal years 2026 and 2025, respectively.

Operating Expenses

	Year Ended			
	Jan 25, 2026	Jan 26, 2025	\$ Change	% Change
	(\$ in millions)			
Research and development	\$ 18,497	\$ 12,914	\$ 5,583	43 %
Sales, general and administrative	4,579	3,491	1,088	31 %
Total operating expenses	\$ 23,076	\$ 16,405	\$ 6,671	41 %

The increases in research and development expenses for fiscal year 2026 were driven by a 29% increase in compensation and benefits expense, including stock-based compensation, reflecting employee growth and compensation increases and a 79% increase in compute and infrastructure.

The increases in sales, general and administrative expenses for fiscal year 2026 were primarily driven by compensation and benefits expense, including stock-based compensation, reflecting employee growth and compensation increases.

Total Other Income, Net

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	\$ Change
	<i>(\$ in millions)</i>		
Interest income	\$ 2,300	\$ 1,786	\$ 514
Interest expense	(259)	(247)	(12)
Other income, net	9,022	1,034	7,988
Total other income, net	\$ 11,063	\$ 2,573	\$ 8,490

The increase in interest income was primarily due to growth in cash, cash equivalents, and debt securities.

Interest expense is primarily comprised of coupon interest and debt discount amortization related to our notes.

Other income, net primarily consists of realized or unrealized gains and losses from investments in non-marketable equity securities, publicly-held equity securities, and the impact of changes in foreign currency rates. The change in Other income, net, compared to fiscal year 2025, was primarily driven by unrealized gains in non-marketable and publicly-held equity securities, including gains from our previously announced investment in Intel's common stock. Refer to Note 7 and 8 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information regarding our non-marketable equity securities.

Income Taxes

Income tax expense was \$21.4 billion and \$11.1 billion for fiscal years 2026 and 2025, respectively. Income tax as a percentage of income before income tax was an expense of 15.1% and 13.3% for fiscal years 2026 and 2025, respectively.

The effective tax rate increased primarily due to a lower percentage of tax benefits from stock-based compensation, FDDEI, and U.S. federal research tax credit relative to the increase in income before income tax.

Our effective tax rates for fiscal years 2026 and 2025 were lower than the U.S. federal statutory rate of 21.0% primarily due to tax benefits from FDDEI, stock-based compensation, income earned in jurisdictions that are subject to taxes at rates lower than the U.S. federal statutory tax rate, and the U.S. federal research tax credit.

In July 2025, the One Big Beautiful Bill Act (OBBBA) was enacted into law and contains several changes to key U.S. federal income tax laws. We have recognized the tax effects of currently effective OBBBA provisions in our results for fiscal year 2026. We will continue to evaluate the impact of these legislative changes as tax authorities provide additional guidance and interpretation.

As of January 25, 2026, based on recent jurisdictional taxable income and expected future earnings, we concluded certain state deferred tax assets are more likely than not realizable and released \$711 million of valuation allowance.

Refer to Note 13 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

Liquidity and Capital Resources

	Jan 25, 2026	Jan 26, 2025
	<i>(In millions)</i>	
Cash and cash equivalents	\$ 10,605	\$ 8,589
Marketable securities	51,951	34,621
Cash, cash equivalents, and marketable securities	\$ 62,556	\$ 43,210

	Year Ended	
	Jan 25, 2026	Jan 26, 2025
	<i>(In millions)</i>	
Net cash provided by operating activities	\$ 102,718	\$ 64,089
Net cash used in investing activities	\$ (52,228)	\$ (20,421)
Net cash used in financing activities	\$ (48,474)	\$ (42,359)

Our fixed income security investments include highly rated, diversified investment types and credit exposures with shorter maturities.

Cash provided by operating activities increased in fiscal year 2026 compared to fiscal year 2025, due to higher revenue.

Cash used in investing activities increased in fiscal year 2026 compared to fiscal year 2025, primarily driven by higher purchases of equity investment securities and the execution of a non-exclusive license agreement with Groq.

Cash used in financing activities increased in fiscal year 2026 compared to fiscal year 2025, mainly due to higher share repurchases.

Liquidity

Our primary sources of liquidity include cash, cash equivalents, marketable securities, and cash generated by our operations. As of January 25, 2026, we had \$62.6 billion in cash, cash equivalents, and marketable securities. We believe that we have sufficient liquidity to meet our operating requirements for at least the next twelve months and for the foreseeable future, including our future obligations. We continuously evaluate our liquidity and capital resources, including our access to external capital, to ensure we can finance future capital requirements.

Our marketable securities consist of publicly-held equity securities, debt securities issued by the U.S. government and its agencies, highly-rated corporations and financial institutions, and foreign government entities, as well as certificates of deposit issued by highly-rated financial institutions. These marketable securities are primarily denominated in U.S. dollars. Refer to Note 7 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

Except for approximately \$1.7 billion of cash, cash equivalents, and marketable securities held outside the U.S. for which we have not accrued any related foreign or state taxes if we repatriate these amounts to the U.S., substantially all of our cash, cash equivalents and marketable securities held outside the U.S. at the end of fiscal year 2026 are available for use in the U.S. without incurring additional U.S. federal income taxes. Our first quarter of any fiscal year (including fiscal year 2027) generally does not include any estimated federal and state income tax payments and our second quarter of any fiscal year (including fiscal year 2027) generally includes two estimated federal and state income tax payments.

Capital Return to Shareholders

On August 26, 2025, our Board of Directors approved an additional \$60.0 billion in share repurchase authorization, without expiration. In fiscal year 2026, we repurchased 282 million shares of our common stock for \$40.4 billion. As of January 25, 2026, we were authorized, subject to certain specifications, to repurchase up to \$58.5 billion of our common stock.

From January 26, 2026 through February 20, 2026, we repurchased 8 million shares for \$1.5 billion pursuant to a pre-established trading plan. We may execute repurchases from time to time, subject to market conditions, operating requirements, and other investment opportunities, in the open market, in privately negotiated transactions, pursuant to a Rule 10b5-1 trading plan or in structured share repurchase agreements in compliance with Rule 10b-18 of the Exchange Act. Our share repurchase program may be suspended at any time at our discretion.

In fiscal year 2026, we paid cash dividends to our shareholders of \$974 million. The payment of future cash dividends is subject to our Board of Directors' continuing determination that the declaration of dividends is in the best interests of our shareholders.

The U.S. Inflation Reduction Act of 2022 requires a 1% excise tax on certain share repurchases in excess of shares issued for employee compensation made after December 31, 2022. The excise tax is included in our share repurchase cost and was not material for fiscal years 2026 and 2025.

Outstanding Indebtedness and Commercial Paper Program

Our aggregate debt maturities as of January 25, 2026, by year payable, are as follows:

	Jan 25, 2026	
	<i>(In millions)</i>	
Due in one year	\$	1,000
Due in one to five years		2,750
Due in five to ten years		1,250
Due in greater than ten years		3,500
Unamortized debt discount and issuance costs		(32)
Net carrying amount	\$	8,468
Less short-term portion		999
Total long-term portion	\$	7,469

In January 2026, we increased the amount of our commercial paper program, pursuant to which we may issue unsecured commercial paper notes from time to time or all at once up to \$25.0 billion. As of January 25, 2026, no commercial paper was outstanding. We will continue to evaluate issuing commercial paper as a component of our overall liquidity strategy.

Refer to Note 11 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for further discussion.

Material Cash Requirements and Other Obligations

For descriptions of our facility lease guarantees, long-term debt, purchase commitments, and operating lease obligations, refer to Note 10, Note 11, Note 12, and Note 17 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K, respectively.

We expect to continue investing in our ecosystem. We are finalizing an investment and partnership agreement with OpenAI. There is no assurance that we will enter into an investment and partnership agreement with OpenAI or that a transaction will be completed. Refer to Item 1A Risk Factors for additional information regarding our investments.

During fiscal year 2026 and fiscal year 2025, we spent \$6.1 billion and \$3.4 billion on capital expenditures, respectively. We expect to increase capital expenditures in fiscal year 2027 relative to fiscal year 2026 to support the future growth of our business.

Unrecognized tax benefits of \$4.0 billion, which includes related interest and penalties of \$374 million, were recorded in non-current income tax payable at the end of fiscal year 2026. We are unable to estimate the timing of any potential tax liability, interest payments, or penalties in individual years due to uncertainties in the underlying income tax positions and the timing of the effective settlement of such tax positions. We are currently under examination by the Internal Revenue Service for our fiscal years 2023 and 2024. Refer to Note 13 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for further information.

Adoption of New and Recently Issued Accounting Pronouncements

Refer to Note 1 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for a discussion of adoption of new and recently issued accounting pronouncements.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

Investment and Interest Rate Risk

We are exposed to interest rate risk related to our fixed-rate investment portfolio and outstanding debt. The investment portfolio is managed consistent with our overall liquidity strategy in support of both working capital needs and growth of our businesses.

According to our sensitivity analysis on our investment portfolio, a decrease in the yield curve of 0.5% as of the end of fiscal year 2026 and 2025 would decrease the fair value for these investments by approximately \$0.2 billion.

As of the end of fiscal year 2026, we had \$8.5 billion of senior Notes outstanding. We carry the Notes at face value less unamortized discount on our Consolidated Balance Sheets. As the Notes bear interest at a fixed rate, we have no financial statement risk associated with changes in interest rates. Refer to Note 11 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

Publicly-held equity securities are subject to market price volatility. A hypothetical 10% decrease in our publicly-held equity securities would decrease the fair value of the publicly-held equity securities balance by \$1.8 billion and an insignificant amount as of January 25, 2026 and January 26, 2025, respectively.

Non-marketable equity securities are measured based on cost minus impairment, if any, and are adjusted for observable price changes in orderly transactions for an identical or similar investment in the same issuer. Valuations of our non-marketable equity securities are inherently complex due to the lack of readily available market data and observable transactions, and impact of macroeconomic factors.

For a description of our equity investments, refer to Notes 7 and 8 of the Notes to Condensed Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

Foreign Exchange Rate Risk

We consider our direct exposure to foreign exchange rate fluctuations to be minimal as substantially all of our sales are in United States dollars and foreign currency forward contracts are used to offset movements of foreign currency exchange rates. Gains or losses from foreign currency remeasurement are included in other income or expenses. The impact of foreign currency transaction gain or loss included in determining net income was not significant for fiscal years 2026 and 2025.

Sales and arrangements with third-party manufacturers provide for pricing and payment in United States dollars, and, therefore, are not subject to exchange rate fluctuations. Increases in the value of the United States' dollar relative to other currencies would make our products more expensive, which could negatively impact our ability to compete. Conversely, decreases in the value of the United States' dollar relative to other currencies could result in our suppliers raising their manufacturing costs.

If the U.S. dollar strengthened by 10% as of January 25, 2026 and January 26, 2025, the amount recorded in Accumulated other comprehensive income (loss) related to our foreign exchange contracts before tax effect would have been an adverse impact of \$180 million and \$136 million, respectively. Change in value of our foreign exchange contracts recorded in Accumulated other comprehensive income (loss) would be expected to offset a corresponding change in hedged forecasted foreign currency expenses when recognized.

If an adverse 10% foreign exchange rate change was applied to our balance sheet hedging contracts, it would have resulted in an adverse impact on income before taxes of \$124 million and \$129 million as of January 25, 2026 and January 26, 2025, respectively. These changes in fair values would be offset in Total other income, net, by corresponding change in fair values of the foreign currency denominated monetary assets and liabilities, assuming the hedge contracts fully cover the foreign currency denominated monetary assets and liabilities balances.

Refer to Note 10 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

Item 8. Financial Statements and Supplementary Data

The information required by this Item is set forth in our Consolidated Financial Statements and Notes thereto included in this Annual Report on Form 10-K.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Controls and Procedures

Disclosure Controls and Procedures

Based on their evaluation as of January 25, 2026, our management, including our Chief Executive Officer and Chief Financial Officer, has concluded that our disclosure controls and procedures (as defined in Rule 13a-15(e) under the Exchange Act) were effective to provide reasonable assurance that the information we are required to disclose in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and our Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosures.

Management's Annual Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Under the supervision and with the participation of our

management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of January 25, 2026 based on the criteria set forth in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the criteria set forth in *Internal Control — Integrated Framework*, our management concluded that our internal control over financial reporting was effective as of January 25, 2026.

The effectiveness of our internal control over financial reporting as of January 25, 2026 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in its report which is included herein.

Changes in Internal Control Over Financial Reporting

There have been no changes in our internal control over financial reporting during the quarter ended January 25, 2026 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. We are continuing a phased upgrade of our enterprise resource planning, or ERP, system to update our existing core financial systems. The ERP system is designed to accurately maintain our financial records used to report operating results. We will continue to evaluate each quarter whether there are changes that materially affect our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

Our management, including our Chief Executive Officer and Chief Financial Officer, does not expect that our disclosure controls and procedures or our internal controls, will prevent all error and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within NVIDIA have been detected.

Item 9B. Other Information

The following members of our Board of Directors and/or officers adopted, modified or terminated a trading arrangement that is intended to satisfy the affirmative defense conditions of Rule 10b5-1(c), or a Rule 10b5-1 Trading Arrangement:

Name	Title of Director or Officer	Action	Date	Total Shares of Common Stock to be Sold	Expiration Date
John O. Dabiri	Director	Adoption	12/10/2025	3,984*	12/7/2026
Colette M. Kress	Executive Vice President and Chief Financial Officer	Adoption	12/18/2025	500,000	3/23/2027

*Estimated assuming our closing stock price as of January 23, 2026. The number of shares is based on an estimate because the plan specifies a formulaic dollar amount of shares to be sold.

Item 9C. Disclosure Regarding Foreign Jurisdictions that Prevent Inspections

Not Applicable.

Part III

Certain information required by Part III is omitted from this report because we will file with the SEC a definitive proxy statement pursuant to Regulation 14A, or the 2026 Proxy Statement, no later than 120 days after the end of fiscal year 2026, and certain information included therein is incorporated herein by reference.

Item 10. Directors, Executive Officers and Corporate Governance

Identification of Directors

Information regarding directors required by this item will be contained in our 2026 Proxy Statement under the caption "Proposal 1 — Election of Directors," and is hereby incorporated by reference.

Identification of Executive Officers

Reference is made to the information regarding executive officers appearing under the heading "Information About Our Executive Officers" in Part I of this Annual Report on Form 10-K, which information is hereby incorporated by reference.

Identification of Audit Committee and Financial Experts

Information regarding our Audit Committee required by this item will be contained in our 2026 Proxy Statement under the captions “Report of the Audit Committee of the Board of Directors” and “Information About the Board of Directors and Corporate Governance,” and is hereby incorporated by reference.

Material Changes to Procedures for Recommending Directors

Information regarding procedures for recommending directors required by this item will be contained in our 2026 Proxy Statement under the caption “Information About the Board of Directors and Corporate Governance,” and is hereby incorporated by reference.

Delinquent Section 16(a) Reports

Information regarding compliance with Section 16(a) of the Exchange Act required by this item will be contained in our 2026 Proxy Statement under the caption “Delinquent Section 16(a) Reports,” and such disclosure, if any, is hereby incorporated by reference.

Code of Conduct

Information regarding our Code of Conduct required by this item will be contained in our 2026 Proxy Statement under the caption “Information About the Board of Directors and Corporate Governance — Code of Conduct,” and is hereby incorporated by reference. The full text of our Code of Conduct and Financial Team Code of Conduct are published on the Investor Relations portion of our website, under Governance, at www.nvidia.com. If we make any amendments to either code, or grant any waiver from a provision of either code to any executive officer or director, we will promptly disclose the nature of the amendment or waiver on our website or in a report on Form 8-K. The contents of our website are not a part of this Annual Report on Form 10-K.

Insider Trading Policy

The information required by Item 408(b) of Regulation S-K is incorporated by reference from the information contained in our 2026 Proxy Statement under the heading “Information About the Board of Directors and Corporate Governance.”

Item 11. Executive Compensation

Information regarding our executive compensation required by this item will be contained in our 2026 Proxy Statement under the captions “Executive Compensation,” “Compensation Committee Interlocks and Insider Participation,” “Director Compensation,” and “Compensation Committee Report,” and is hereby incorporated by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Ownership of NVIDIA Securities

Information regarding ownership of NVIDIA securities required by this item will be contained in our 2026 Proxy Statement under the caption “Security Ownership of Certain Beneficial Owners and Management,” and is hereby incorporated by reference.

Equity Compensation Plan Information

Information regarding our equity compensation plans required by this item will be contained in our 2026 Proxy Statement under the caption “Equity Compensation Plan Information,” and is hereby incorporated by reference.

Item 13. Certain Relationships and Related Transactions, and Director Independence

Information regarding related transactions and director independence required by this item will be contained in our 2026 Proxy Statement under the captions “Review of Transactions with Related Persons” and “Information About the Board of Directors and Corporate Governance — Independence of the Members of the Board of Directors,” and is hereby incorporated by reference.

Item 14. Principal Accountant Fees and Services

Information regarding accounting fees and services required by this item will be contained in our 2026 Proxy Statement under the caption “Fees Billed by the Independent Registered Public Accounting Firm,” and is hereby incorporated by reference.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of NMDIA Corporation

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of NMDIA Corporation and its subsidiaries (the "Company") as of January 25, 2026 and January 26, 2025, and the related consolidated statements of income, comprehensive income, shareholders' equity, and cash flows for each of the three years in the period ended January 25, 2026, including the related notes and financial statement schedule listed in the index appearing under Item 15(a)(2) (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of January 25, 2026, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of January 25, 2026 and January 26, 2025, and the results of its operations and its cash flows for each of the three years in the period ended January 25, 2026 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of January 25, 2026, based on criteria established in Internal Control - Integrated Framework (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Annual Report on Internal Control over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that (i) relates to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Valuation of Inventories - Provisions for Excess or Obsolete Inventories and Excess Product Purchase Commitments

As described in Notes 1, 9, and 12 to the consolidated financial statements, the Company charges cost of sales for inventory provisions to write-down inventory for excess or obsolete inventory and for excess product purchase commitments. Most of the Company's inventory provisions relate to excess quantities of products, based on the Company's inventory levels and future product purchase commitments compared to assumptions about future demand including the impact of market conditions such as regulatory export restrictions on their products. As of January 25, 2026, the Company's consolidated inventories balance was \$21.4 billion and the Company's consolidated outstanding inventory purchase and long-term supply and capacity obligations balance was \$95.2 billion, of which a significant portion relates to inventory purchase obligations.

The principal considerations for our determination that performing procedures relating to the valuation of inventories, specifically the provisions for excess or obsolete inventories and excess product purchase commitments, is a critical audit matter are the significant judgment by management when developing provisions for excess or obsolete inventories and excess product purchase commitments, including developing assumptions related to future demand and market conditions. This in turn led to significant auditor judgment, subjectivity, and effort in performing procedures and evaluating management's assumptions related to future demand and market conditions.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's provisions for excess or obsolete inventories and excess product purchase commitments, including controls over management's assumptions related to future demand and market conditions. These procedures also included, among others, testing management's process for developing the provisions for excess or obsolete inventories and excess product purchase commitments; evaluating the appropriateness of management's approach; testing the completeness and accuracy of underlying data used in the approach; and evaluating the reasonableness of management's assumptions related to future demand and market conditions. Evaluating management's assumptions related to future demand and market conditions involved evaluating whether the assumptions used by management were reasonable considering (i) current and past results, including historical product life cycle, (ii) the consistency with external market and industry data, and (iii) changes in technology.

/s/PricewaterhouseCoopers LLP

San Jose, California
February 25, 2026

We have served as the Company's auditor since 2004.

Note 1 - Organization and Summary of Significant Accounting Policies

Our Company

Headquartered in Santa Clara, California, NVIDIA was incorporated in California in April 1993 and reincorporated in Delaware in April 1998.

All references to "NVIDIA," "we," "us," "our" or the "Company" mean NVIDIA Corporation and its subsidiaries.

Certain prior fiscal year balances have been reclassified to conform to the current fiscal year presentation. Non-marketable equity securities, previously presented within other assets, were reclassified to be presented separately on our consolidated balance sheets and had no impact to total assets or consolidated statement of cash flows.

Fiscal Year

We operate on a 52- or 53-week year, ending on the last Sunday in January. Fiscal years 2026, 2025 and 2024 were all 52-week years. Fiscal year 2027 will be a 53-week year with the fourth quarter consisting of 14 weeks.

Principles of Consolidation

Our consolidated financial statements include the accounts of NVIDIA Corporation and our wholly-owned subsidiaries. All intercompany balances and transactions have been eliminated in consolidation.

Use of Estimates

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Actual results could differ materially from our estimates. On an on-going basis, we evaluate our estimates, including those related to accounts receivable, cash equivalents and marketable securities, goodwill, income taxes, inventories and product purchase commitments, investigation and settlement costs, litigation, non-marketable equity securities, other contingencies, property, plant, and equipment, revenue recognition, and stock-based compensation. These estimates are based on historical facts and various other assumptions that we believe are reasonable.

Revenue Recognition

We derive our revenue primarily from product sales including hardware and systems. We determine revenue recognition through the following steps: (1) identification of the contract with a customer; (2) identification of the performance obligations in the contract; (3) determination of the transaction price; (4) allocation of the transaction price to the performance obligations in the contract (where revenue is allocated on a relative standalone selling price basis by maximizing the use of observable inputs to determine the standalone selling price for each performance obligation); and (5) recognition of revenue when, or as, we satisfy a performance obligation. Payment from customers, per our standard payment terms, is generally due shortly after delivery of our products.

Product Sales Revenue

Revenue from product sales is recognized upon transfer of control of products to customers in an amount that reflects the consideration we expect to receive in exchange for those products. Certain products are sold with support or an extended warranty. Support and extended warranty revenue are recognized ratably over the service period, or as services are performed. Revenue is recognized net of allowances for returns, customer programs and any taxes collected from customers.

For products sold with a right of return, we record a reduction to revenue by establishing a sales return allowance for estimated product returns at the time revenue is recognized, based primarily on historical return rates. However, if product returns for a fiscal period are anticipated to exceed historical return rates, we may determine that additional sales return allowances are required to accurately reflect our estimated exposure for product returns.

Our customer programs involve rebates, which are designed to serve as sales incentives to resellers of our products in various target markets, and MDFs which represent monies paid to our partners that are earmarked for market segment development and are designed to support our partners' activities while also promoting NVIDIA products. We account for customer programs as a reduction to revenue and accrue for such programs for potential rebates and MDFs based on the amount we expect to be claimed by customers.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Contracts with Multiple Performance Obligations

Our contracts may contain more than one deliverable, each of which is separately accounted for as a distinct performance obligation. We account for multiple agreements with a single customer as a single contract if the contractual terms and/or substance of those agreements indicate that they may be so closely related that they are, in effect, parts of a single contract.

We allocate the total transaction price to each distinct performance obligation in an arrangement with multiple performance obligations on a relative standalone selling price basis. The standalone selling price reflects the price we would charge for a specific product or service if it were sold separately in similar circumstances and to similar customers. When determining standalone selling price, we maximize the use of observable inputs.

Product Warranties

We offer a limited warranty to end-users ranging from one to three years for products to repair or replace products for manufacturing defects or hardware component failures. Cost of revenue includes the estimated cost of product warranties that are calculated at the point of revenue recognition. Under limited circumstances, we may offer an extended limited warranty to customers for certain products. We also accrue for known warranty and indemnification issues if a loss is probable and can be reasonably estimated.

Stock-based Compensation

We use the closing trading price of our common stock on the date of grant, minus a dividend yield discount, as the fair value of awards of restricted stock units, or RSUs, and performance stock units, or PSUs, that are based on our corporate financial performance targets. We use a Monte Carlo simulation on the date of grant to estimate the fair value of PSUs that are based on our stock performance compared to market performance, or market-based PSUs. The compensation expense for RSUs and market-based PSUs is recognized using a straight-line attribution method over the requisite employee service period while compensation expense for PSUs is recognized using an accelerated amortization model based on performance targets probable of achievement. We estimate the fair value of shares to be issued under our employee stock purchase plan, or ESPP, using the Black-Scholes model at the commencement of an offering period in March and September of each year. Stock-based compensation for our ESPP is expensed using an accelerated amortization model. Additionally, for RSUs, PSUs, and market-based PSUs, we estimate expected forfeitures based on our historical forfeitures.

Litigation, Investigation and Settlement Costs

We currently are, and will likely continue to be subject to claims, litigation, and other actions, including potential regulatory proceedings, involving patent and other intellectual property matters, taxes, labor and employment, competition and antitrust, commercial disputes, goods and services offered by us and by third parties, and other matters. There are many uncertainties associated with any litigation or investigation, and we cannot be certain that these actions or other third-party claims against us will be resolved without litigation, fines and/or substantial settlement payments or judgments. If information becomes available that causes us to determine that a loss in any of our pending litigation, investigations or settlements is probable, and we can reasonably estimate the loss associated with such events, we will record the loss. However, the actual liability in any such litigation or investigation may be materially different from our estimates, which could require us to record additional costs. If we determine that a loss is reasonably possible and the loss or range of loss can be estimated, we disclose the reasonably possible loss.

Foreign Currency Remeasurement

We use the U.S. dollar as our functional currency for our subsidiaries. Foreign currency monetary assets and liabilities are remeasured into United States dollars at end-of-period exchange rates. Non-monetary assets and liabilities such as property and equipment and equity are remeasured at historical exchange rates. Revenue and expenses are remeasured at exchange rates in effect during each period, except for those expenses related to non-monetary balance sheet amounts, which are remeasured at historical exchange rates. Gains or losses from foreign currency remeasurement are included in earnings in our Consolidated Statements of Income and to date have not been significant.

Income Taxes

We recognize federal, state and foreign current tax liabilities or assets based on our estimate of taxes payable or refundable in the current fiscal year by tax jurisdiction. We recognize federal, state and foreign deferred tax assets or liabilities, as appropriate, for our estimate of future tax effects attributable to temporary differences and carryforwards; and we record a valuation allowance to reduce any deferred tax assets by the amount of any tax benefits that, based on available evidence and judgment, are not expected to be realized.

Our calculation of deferred tax assets and liabilities is based on certain estimates and judgments and involves dealing with uncertainties in the application of complex tax laws. Our estimates of deferred tax assets and liabilities may change

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

based, in part, on added certainty or finality to an anticipated outcome, changes in accounting standards or tax laws in the U.S., or foreign jurisdictions where we operate, or changes in other facts or circumstances. In addition, we recognize liabilities for potential U.S. and foreign income tax contingencies based on our estimate of whether, and the extent to which, additional taxes may be due. If we determine that payment of these amounts is unnecessary or if the recorded tax liability is less than our current assessment, we may be required to recognize an income tax benefit or additional income tax expense in our financial statements accordingly.

As of January 25, 2026, we had a valuation allowance of \$768 million related to capital loss carryforwards, and certain other deferred tax assets that management determined are not likely to be realized due, in part, to jurisdictional projections of future taxable income, including capital gains. To the extent realization of the deferred tax assets becomes more-likely-than-not, we would recognize such deferred tax assets as income tax benefits during the period.

We recognize the benefit from a tax position only if it is more-likely-than-not that the position would be sustained upon audit based solely on the technical merits of the tax position. Our policy is to include interest and penalties related to unrecognized tax benefits as a component of income tax expense.

Net Income Per Share

Basic net income per share is computed using the weighted average number of common shares outstanding during the period. Diluted net income per share is computed using the weighted average number of common and potentially dilutive shares outstanding during the period, using the treasury stock method. Any anti-dilutive effect of equity awards outstanding is not included in the computation of diluted net income per share.

Cash and Cash Equivalents and Marketable Securities

We consider all highly liquid investments that are readily convertible into cash and have an original maturity of three months or less at the time of purchase to be cash equivalents. Marketable securities consist of highly liquid debt investments with maturities of greater than three months when purchased and publicly-held equity securities. We classify these investments as current or long term based on the nature of the investments and their availability for use in current operations.

We record our debt investments as cash equivalents and marketable debt securities and classify them at the date of acquisition as available-for-sale. These available-for-sale debt securities are reported at fair value with the related unrealized gains and losses included in accumulated other comprehensive income or loss, a component of shareholders' equity, net of tax. The fair value of interest-bearing debt securities includes accrued interest. Realized gains and losses on the sale of marketable securities are determined using the specific-identification method and recorded in the Other income (expense), net, section of our Consolidated Statements of Income.

Available-for-sale debt securities are subject to impairment review. If the estimated fair value of available-for-sale debt securities is less than its amortized cost basis, we determine if the difference, if any, is caused by expected credit losses and write-down the amortized cost basis of the securities if it is more likely than not we will be required or we intend to sell the securities before recovery of its amortized cost basis. Allowances for credit losses and write-downs are recognized in the Other income, net, net section of our Consolidated Statements of Income.

Publicly-held equity securities and money market funds have readily determinable fair values with changes in fair value recorded in Other income, net.

Fair Value of Financial Instruments

The carrying value of cash equivalents, accounts receivable, accounts payable and accrued liabilities approximate their fair values due to their relatively short maturities as of January 25, 2026 and January 26, 2025. Marketable debt and equity securities are reported at fair value. Derivative instruments are recognized as either assets or liabilities and are measured at fair value. The accounting for changes in the fair value of a derivative depends on the intended use of the derivative and the resulting designation. For derivative instruments designated as accounting hedges, the effective portion of the gains or losses on the derivatives is initially reported as a component of other comprehensive income or loss and is subsequently recognized in earnings when the hedged exposure is recognized in earnings. For derivative instruments not designated as accounting hedges, changes in fair value are recognized in earnings.

Financial instruments measured and disclosed at fair value are classified and disclosed based on the observability of inputs used in the determination of fair value as follows:

- Level 1: Observable inputs such as quoted prices in active markets.
- Level 2: Observable inputs other than Level 1 prices, such as quoted prices in less active markets or model-derived valuations that are observable either directly or indirectly.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

- Level 3: Unobservable inputs in which there is little or no market data that are significant to the fair value of the assets or liabilities.

Concentration of Credit Risk

Financial instruments that potentially subject us to concentrations of credit risk consist primarily of cash equivalents, marketable securities, lease guarantees, and accounts receivable. Our investment policy requires the purchase of highly-rated fixed income securities, the diversification of investment type and credit exposures, and includes certain limits on our portfolio maturities. We perform ongoing credit evaluations of our customers' financial condition and maintain an allowance for potential credit losses. This allowance consists of an amount identified for specific customers and an amount based on overall estimated exposure. Our overall estimated exposure excludes amounts covered by credit insurance and letters of credit.

Inventories

Inventory cost is computed on an adjusted standard basis, which approximates actual cost on an average or first-in, first-out basis. Inventory costs consist of the cost of semiconductors, including wafer fabrication, assembly, testing and packaging, manufacturing support costs, including labor and overhead associated with such purchases, final test yield fallout, and shipping costs, as well as the cost of purchased memory products and other component parts. We charge cost of sales for inventory provisions to write-down our inventory to the lower of cost or net realizable value or for obsolete or excess inventory, and for excess product purchase commitments. Most of our inventory provisions relate to excess quantities of products, based on our inventory levels and future product purchase commitments compared to assumptions about future demand including the impact of regulatory export restrictions on our products. Once inventory has been written-off or written-down, it creates a new cost basis for the inventory that is not subsequently written-up. We record a liability for noncancelable purchase commitments with suppliers for quantities in excess of our future demand forecasts consistent with our valuation of obsolete or excess inventory.

Property and Equipment

Property and equipment are stated at cost less accumulated depreciation. Depreciation of property and equipment is computed using the straight-line method based on the estimated useful lives of the assets of two to seven years. Once an asset is identified for retirement or disposition, the related cost and accumulated depreciation or amortization are removed, and a gain or loss is recorded. The estimated useful lives of our buildings are up to thirty years. Depreciation expense includes the amortization of assets recorded under finance leases. Leasehold improvements and assets recorded under finance leases are amortized over the shorter of the expected lease term or the estimated useful life of the asset.

Leases

We determine if an arrangement is or contains a lease at inception. Operating leases with lease terms of more than 12 months are included in operating lease assets, accrued and other current liabilities, and long-term operating lease liabilities on our consolidated balance sheet. Operating lease assets represent our right to use an underlying asset for the lease term and lease liabilities represent our obligation to make lease payments over the lease term. We combine lease and non-lease components for offices and data centers in determining the operating lease assets and liabilities.

Operating lease assets and liabilities are recognized based on the present value of the remaining lease payments discounted using our incremental borrowing rate. Operating lease assets also include initial direct costs incurred and prepaid lease payments, minus any lease incentives. Our lease terms include options to extend or terminate the lease when it is reasonably certain that we will exercise that option. Lease costs are recognized on a straight-line basis over the lease term.

Goodwill

We allocate goodwill to reporting units based on the expected benefit from the business combination. Goodwill is subject to our annual impairment test during the fourth quarter of our fiscal year, or earlier if indicators of potential impairment exist. In completing our impairment test, we perform either a qualitative or a quantitative analysis on a reporting unit basis.

Qualitative factors include industry and market considerations, overall financial performance, and other relevant events and factors affecting the reporting units. Goodwill impairments were not identified for the periods presented.

Intangible Assets and Other Long-Lived Assets

Intangible assets primarily represent acquired intangible assets including developed technology and customer relationships, as well as rights acquired under technology licenses, patents, and acquired IP. We currently amortize our intangible assets with finite lives over periods ranging from one to twenty years using a method that reflects the pattern

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

in which the economic benefits of the intangible asset are consumed or otherwise used up or, if that pattern cannot be reliably determined, using a straight-line amortization method.

Long-lived assets, such as property and equipment and intangible assets subject to amortization, are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset or asset group may not be recoverable. The recoverability of assets or asset groups to be held and used is measured by a comparison of the carrying amount of an asset or asset group to estimated undiscounted future cash flows expected to be generated by the asset or asset group. If the carrying amount of an asset or asset group exceeds its estimated future cash flows, an impairment charge is recognized for the amount by which the carrying amount of the asset or asset group exceeds the estimated fair value of the asset or asset group. Fair value is determined based on the estimated discounted future cash flows expected to be generated by the asset or asset group. Assets and liabilities to be disposed of would be separately presented in the Consolidated Balance Sheet and the assets would be reported at the lower of the carrying amount or fair value less costs to sell, and would no longer be depreciated.

Business Combination

The Company applies a screen test to evaluate if substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets to determine whether a transaction is accounted for as an asset acquisition or business combination. We allocate the fair value of the purchase price of an acquisition to the tangible assets acquired, liabilities assumed, and intangible assets acquired, based on their estimated fair values. The excess of the fair value of the purchase price over the fair values of these net tangible and intangible assets acquired is recorded as goodwill. Management's estimates of fair value are based upon assumptions believed to be reasonable, but our estimates and assumptions are inherently uncertain and subject to refinement. The estimates and assumptions used in valuing intangible assets include, but are not limited to, the amount and timing of projected future cash flows, discount rate used to determine the present value of these cash flows and asset lives. These estimates are inherently uncertain and, therefore, actual results may differ from the estimates made. As a result, during the measurement period of up to one year from the acquisition date, we may record adjustments to the assets acquired and liabilities assumed with the corresponding offset to goodwill. Upon the measurement period's conclusion or final determination of the fair value of the purchase price of an acquisition, whichever comes first, any subsequent adjustments are recorded to our Consolidated Statements of Income.

Acquisition-related expenses are recognized separately from the business combination and expensed as incurred.

Non-Marketable Equity Securities

Non-marketable equity securities consist of investments in privately-held companies that do not have a readily determinable fair value. These investments are measured at cost minus impairment, if any, and are adjusted for changes resulting from observable price changes in orderly transactions for an identical or similar investment in the same issuer, or the measurement alternative. Fair value is based upon observable inputs in an inactive market and the valuation requires our judgment due to the absence of market prices and inherent lack of liquidity. All gains and losses on these investments, realized and unrealized, are recognized in Other income, net on our Consolidated Statements of Income.

We assess whether an impairment loss has occurred on our investments in non-marketable equity securities, accounted for under the measurement alternative based on quantitative and qualitative factors. If any impairment is identified for non-marketable equity securities, we write down the investment to its fair value and record the corresponding charge through Other income, net on our Consolidated Statements of Income.

The Company assesses its investments for significant influence to determine the appropriate method of accounting, including application of the equity method. Equity method investments were not material.

Recently Issued Accounting Pronouncements

Recent Accounting Pronouncements Not Yet Adopted

In November 2024, the Financial Accounting Standards Board, or FASB, issued a new accounting standard requiring disclosures of certain additional expense information on an annual and interim basis, including, among other items, the amounts of purchases of inventory, employee compensation, depreciation and intangible asset amortization included within each income statement expense caption, as applicable. We will adopt this standard in the fiscal year 2028 annual report. We do not expect the adoption of this standard to have a material impact on our Consolidated Financial Statements other than additional disclosures.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Note 2 - Groq

In December 2025, we entered into a non-exclusive license agreement with Groq, Inc., or Groq, for its language processing unit technology and hired certain Groq employees. No customer contracts, existing products, or equity interests were purchased. We recorded \$14.4 billion of goodwill and a \$2.5 billion developed technology intangible asset, valued using a cost-to-recreate methodology with a five-year useful life. Goodwill, primarily attributable to the workforce and future development of the licensed technology, was recorded in the Compute & Networking reporting unit. Total consideration consists of \$13.0 billion paid at closing and \$4 billion, inclusive of imputed interest, payable within one year included in Accrued and Other Current Liabilities on our Consolidated Balance Sheets. The goodwill is tax deductible. Pro forma results of operations have not been presented because the effect was not material.

Note 3 - Stock-Based Compensation

We recognize stock-based compensation expense from grants of restricted stock units, or RSUs, performance stock units, or PSUs, and market-based PSUs, and issuances under our employee stock purchase plan, or ESPP.

Consolidated Statements of Income include stock-based compensation expense as follows:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Cost of revenue	\$ 261	\$ 178	\$ 141
Research and development	4,676	3,423	2,532
Sales, general and administrative	1,449	1,136	876
Total	<u>\$ 6,386</u>	<u>\$ 4,737</u>	<u>\$ 3,549</u>

The following is a summary of equity awards granted under our equity incentive plans:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions, except per share data)</i>		

RSUs, PSUs and Market-based PSUs

Awards granted	70	89	140
Estimated total grant-date fair value	\$ 9,389	\$ 7,834	\$ 5,316
Weighted average grant-date fair value per share	\$ 133.97	\$ 87.99	\$ 37.41

ESPP

Shares purchased	13	30	30
Weighted average price per share	\$ 49.13	\$ 17.74	\$ 15.81
Weighted average grant-date fair value per share	\$ 20.75	\$ 8.61	\$ 6.99

As of January 25, 2026, aggregate unearned stock-based compensation expense was \$14.8 billion, which is expected to be recognized over a weighted average period of 2.3 years for RSUs, PSUs, and market-based PSUs, and 0.9 years for ESPP.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

The fair value of shares issued under our ESPP has been estimated with the following assumptions:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(Using the Black-Scholes model)</i>		
ESPP			
Weighted average expected life (in years)	0.1-2.0	0.1-2.0	0.1-2.0
Risk-free interest rate	3.5%-4.3%	3.6%-5.4%	3.9%-5.5%
Volatility	26%-96%	31%-75%	31%-67%
Dividend yield	0.03%	0.03%	0.06%

For ESPP shares, the expected term represents the average term from the first day of the offering period to the purchase date. The risk-free interest rate assumption used to value ESPP shares is based upon observed interest rates on Treasury bills appropriate for the expected term. Our expected stock price volatility assumption for ESPP is estimated using historical volatility. For awards granted, we use the dividend yield at grant date. Our RSUs, PSUs, and market-based PSUs are not eligible for cash dividends prior to vesting; therefore, the fair values of RSUs, PSUs, and market-based PSUs are discounted for the dividend yield.

Additionally, for RSUs, PSUs, and market-based PSUs, we estimate expected forfeitures based on our historical forfeitures.

Equity Incentive Program

We grant RSUs, PSUs, market-based PSUs, and stock purchase rights under the following equity incentive plans. In addition, in connection with our acquisitions of various companies, we have assumed certain stock-based awards granted under their stock incentive plans and converted them into our RSUs.

Amended and Restated 2007 Equity Incentive Plan

The NVIDIA Corporation Amended and Restated 2007 Equity Incentive Plan, or the 2007 Plan, authorizes the issuance of incentive stock options, non-statutory stock options, restricted stock, RSUs, stock appreciation rights, performance stock awards, performance cash awards, and other stock-based awards to employees, directors and consultants. Only our employees may receive incentive stock options. We grant RSUs, PSUs and market-based PSUs under the 2007 Plan. As of January 25, 2026, up to 192 million shares of our common stock could be issued pursuant to stock awards granted under the 2007 Plan, and 1.3 billion shares were available for future grants.

Subject to certain exceptions, RSUs vest generally over four years subject to continued service. PSUs vest over four years, subject to continued service and performance conditions. Market-based PSUs vest on approximately the third anniversary of the date of grant subject to market conditions. However, the number of shares subject to both PSUs and market-based PSUs that are eligible to vest is determined by the Compensation Committee based on achievement of pre-determined criteria.

Amended and Restated 2012 Employee Stock Purchase Plan

Employees who participate in the NVIDIA Corporation Amended and Restated 2012 Employee Stock Purchase Plan, or as most recently amended and restated, the 2012 Plan, may have up to 25% of their earnings withheld to purchase shares of common stock. The Board may decrease this percentage at its discretion. Each offering period is about 24 months, divided into four purchase periods of six months. The price of common stock purchased under our 2012 Plan will be equal to 85% of the lower of the fair market value of the common stock on the commencement date of each offering period or the fair market value of the common stock on each purchase date within the offering. As of January 25, 2026, we had 2.2 billion shares reserved for future issuance under the 2012 Plan.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements

Equity Award Activity

The following is a summary of our equity award transactions under our equity incentive plans:

	RSUs, PSUs and Market-based PSUs Outstanding	
	Number of Shares	Weighted Average Grant-Date Fair Value Per Share
	<i>(In millions, except per share data)</i>	
Balance as of Jan 26, 2025	274	\$ 44.75
Granted	70	\$ 133.97
Vested	(146)	\$ 39.14
Canceled and forfeited	(9)	\$ 59.29
Balance as of Jan 25, 2026	<u>189</u>	<u>\$ 81.51</u>
Vested and expected to vest after Jan 25, 2026	<u>188</u>	<u>\$ 81.15</u>

As of January 25, 2026 and January 26, 2025, there were 1.3 billion and 1.4 billion shares, respectively, of common stock available for future grants under our equity incentive plans.

The total fair value of RSUs and PSUs, as of their respective vesting dates, during the years ended January 25, 2026, January 26, 2025, and January 28, 2024, was \$22.2 billion, \$15.1 billion, and \$8.2 billion, respectively.

Note 4 - Net Income Per Share

The following is the basic and diluted net income per share computations for the periods presented:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions, except per share data)</i>		
Numerator:			
Net income	\$ 120,067	\$ 72,880	\$ 29,760
Denominator:			
Basic weighted average shares	24,359	24,555	24,690
Dilutive impact of outstanding equity awards	155	249	250
Diluted weighted average shares	<u>24,514</u>	<u>24,804</u>	<u>24,940</u>
Net income per share:			
Basic (1)	\$ 4.93	\$ 2.97	\$ 1.21
Diluted (2)	\$ 4.90	\$ 2.94	\$ 1.19
Anti-dilutive equity awards excluded from diluted net income per share	41	51	150

- (1) Net income divided by basic weighted average shares.
(2) Net income divided by diluted weighted average shares.

Note 5 - Goodwill

As of January 25, 2026, the total carrying amount of goodwill was \$20.8 billion, consisting of goodwill balances allocated to our Compute & Networking and Graphics reporting units of \$20.5 billion and \$370 million, respectively. As of January 26, 2025, the total carrying amount of goodwill was \$5.2 billion, consisting of goodwill balances allocated to our Compute & Networking and Graphics reporting units of \$4.8 billion and \$370 million, respectively. Goodwill increased by \$15.6 billion in fiscal year 2026 and was allocated to our Compute & Networking reporting unit. During the fourth quarters of fiscal years 2026, 2025, and 2024, we completed our annual qualitative impairment tests and concluded that goodwill was not impaired.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Note 6 - Amortizable Intangible Assets

The components of our amortizable intangible assets are as follows:

	Jan 25, 2026			Jan 26, 2025		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
	<i>(In millions)</i>					
Acquisition-related intangible assets	\$ 5,656	\$ (2,580)	\$ 3,076	\$ 2,900	\$ (2,264)	\$ 636
Patents and licensed technology	528	(298)	230	449	(278)	171
Total intangible assets	<u>\$ 6,184</u>	<u>\$ (2,878)</u>	<u>\$ 3,306</u>	<u>\$ 3,349</u>	<u>\$ (2,542)</u>	<u>\$ 807</u>

Amortization expense associated with intangible assets for fiscal years 2026, 2025, and 2024 was \$488 million, \$593 million, and \$614 million, respectively.

The following table outlines the estimated future amortization expense related to the net carrying amount of intangible assets as of January 25, 2026:

Fiscal Year:	Future Amortization Expense	
	<i>(In millions)</i>	
2027	\$	923
2028		729
2029		592
2030		511
2031		468
2032 and thereafter		83
Total	<u>\$</u>	<u>3,306</u>

Note 7 - Cash Equivalents and Marketable Securities

The fair values of our financial assets are determined using quoted market prices of identical assets or market prices of similar assets from active markets. We review fair value classification on a quarterly basis. The following is a summary of cash equivalents and marketable securities:

Jan 25, 2026									
Pricing Category	Cost or Amortized Cost	Unrealized Gain	Unrealized Loss	Estimated Fair Value	Reported as				
					Cash Equivalents	Marketable Securities	Other Assets		
<i>(In millions)</i>									
Debt securities issued by the U.S. Treasury	Level 2	\$ 21,635	\$ 77	\$ (3)	\$ 21,709	\$ —	\$ 21,709	\$ —	
Corporate debt securities	Level 2	15,410	92	(3)	15,499	345	15,154	—	
Debt securities issued by U.S. government agencies	Level 2	2,157	4	—	2,161	—	2,161	—	
Certificates of deposit	Level 2	110	—	—	110	110	—	—	
Foreign government bonds	Level 2	40	1	—	41	—	41	—	
Money market funds	Level 1	7,830	—	—	7,830	7,830	—	—	
Publicly-held equity securities (1) (2)	Level 1				17,726	—	12,886	4,840	
Total		\$ 47,182	\$ 174	\$ (6)	\$ 65,076	\$ 8,285	\$ 51,951	\$ 4,840	

(1) In the first quarter of fiscal year 2026, one investment was reclassified from non-marketable equity securities to marketable securities following public market trading. The balance as of January 25, 2026 includes \$10.5 billion of investments which are subject to short-term lock-up restrictions on the ability to sell.

(2) The long-term portion of marketable equity securities, which are subject to lock-up restrictions through December 2027 of \$4.8 billion as of January 25, 2026, is included in other assets.

Publicly-held equity securities are subject to market price volatility. Net unrealized gains on investments in publicly-held equity securities held at period end were \$6.6 billion for fiscal year 2026. Net unrealized gains on investments in publicly-held equity securities held at period end were not significant for fiscal years 2025 and 2024.

Net realized gains on investments in publicly-held equity securities sold were not significant for fiscal years 2026, 2025, and 2024, reflecting the difference between the sale proceeds and the carrying value of the equity securities at the beginning of the period or the purchase date, if later.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Jan 26, 2025							
Pricing Category		Cost or Amortized Cost	Unrealized Gain	Unrealized Loss	Estimated Fair Value	Reported as	
						Cash Equivalents	Marketable Securities
<i>(In millions)</i>							
Corporate debt securities	Level 2	\$ 18,504	\$ 51	\$ (29)	\$ 18,526	\$ 2,071	\$ 16,455
Debt securities issued by the U.S. Treasury	Level 2	16,749	42	(22)	16,769	1,801	14,968
Debt securities issued by U.S. government agencies	Level 2	2,775	7	(5)	2,777	—	2,777
Foreign government bonds	Level 2	177	—	—	177	137	40
Certificates of deposit	Level 2	97	—	—	97	97	—
Money market funds	Level 1	3,760	—	—	3,760	3,760	—
Publicly-held equity securities	Level 1	—	—	—	381	—	381
Total		\$ 42,062	\$ 100	\$ (56)	\$ 42,487	\$ 7,866	\$ 34,621

The following tables provide the breakdown of unrealized losses, aggregated by investment category and length of time that individual debt securities have been in a continuous loss position:

	Jan 25, 2026		Jan 26, 2025	
	Less than 12 Months		Less than 12 Months	
	Estimated Fair Value	Gross Unrealized Loss	Estimated Fair Value	Gross Unrealized Loss
<i>(In millions)</i>				
Debt securities issued by the U.S. Treasury	\$ 10,666	\$ (3)	\$ 6,315	\$ (22)
Corporate debt securities	1,332	(3)	5,291	(29)
Debt securities issued by U.S. government agencies	1,134	—	816	(5)
Total	\$ 13,132	\$ (6)	\$ 12,422	\$ (56)

Gross unrealized losses related to debt securities in a continuous loss position of twelve months or greater as of January 25, 2026 and January 26, 2025 were not significant. Gross unrealized losses are related to fixed income securities, driven primarily by changes in interest rates.

The estimated fair value of debt securities included in cash equivalents and marketable securities are shown below by contractual maturity.

	Jan 25, 2026
<i>(In millions)</i>	
Less than one year	\$ 20,427
Due in 1 - 5 years	19,093
Total	\$ 39,520

Note 8 - Non-marketable Equity Securities

Our non-marketable equity securities are valued under the measurement alternative applying valuation methods based on observable transactions for similar investments of the same issuer and unobservable inputs such as volatility, expected

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

time to liquidity, risk free rate and security-specific rights and obligations. Gains and losses on these investments, realized and unrealized, are recognized in Other income, net on our Consolidated Statements of Income.

Adjustments to the carrying value of our non-marketable equity securities during fiscal years 2026 and 2025 were as follows:

	Year Ended	
	Jan 25, 2026	Jan 26, 2025
	<i>(In millions)</i>	
Balance at beginning of period	\$ 3,387	\$ 1,321
Adjustments related to non-marketable equity securities:		
Net additions	17,444	1,309
Unrealized gains	2,369	816
Reclassification (1)	(848)	—
Impairments and unrealized losses	(101)	(59)
Balance at end of period	<u>\$ 22,251</u>	<u>\$ 3,387</u>

(1) Represents reclassifications from non-marketable equity securities to marketable securities following public market trading.

Non-marketable equity securities had cumulative gross unrealized gains of \$2.7 billion and \$1.1 billion, and cumulative gross unrealized losses and impairments of \$176 million and \$105 million on securities held as of January 25, 2026 and January 26, 2025, respectively.

Note 9 - Balance Sheet Components

We refer to customers who purchase products directly from NVIDIA as direct customers, such as AIBs, distributors, ODMs, OEMs, CSPs, AI model makers, and system integrators. Certain direct customers may use either internal resources or third-party system integrators to complete their build. Three direct customers accounted for 25%, 18%, and 13% of our accounts receivable balance as of January 25, 2026. Two direct customers accounted for 17% and 16% of our accounts receivable balance as of January 26, 2025.

Certain balance sheet components are as follows:

	Jan 25, 2026	Jan 26, 2025
	<i>(In millions)</i>	
Inventories:		
Raw materials	\$ 3,807	3,408
Work in process	8,822	3,399
Finished goods	8,774	3,273
Total inventories (1)	<u>\$ 21,403</u>	<u>10,080</u>

(1) In fiscal years 2026 and 2025, we recorded inventory provisions of \$4.0 billion and \$1.6 billion, respectively, in cost of revenue.

	Jan 25, 2026	Jan 26, 2025	Estimated Useful Life
	<i>(In millions)</i>		<i>(In years)</i>
Property and Equipment:			
Land	\$ 777	\$ 511	(A)
Buildings, leasehold improvements, and furniture	2,891	2,076	(B)
Equipment, compute hardware, and software	12,619	7,568	2-7
Construction in process	683	529	(C)
Total property and equipment, gross	16,970	10,684	
Accumulated depreciation and amortization	(6,587)	(4,401)	
Total property and equipment, net	<u>\$ 10,383</u>	<u>\$ 6,283</u>	

(A) Land is a non-depreciable asset.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

(B) The estimated useful lives of our buildings are up to thirty years. Leasehold improvements and finance leases are amortized based on the lesser of either the asset's estimated useful life or the expected remaining lease term.

(C) Construction in process represents assets that are not available for their intended use.

Depreciation expense for fiscal years 2026, 2025, and 2024 was \$2.4 billion, \$1.3 billion, and \$894 million, respectively.

Accumulated amortization of leasehold improvements and finance leases was \$519 million and \$410 million as of January 25, 2026 and January 26, 2025, respectively.

Property, equipment and intangible assets acquired but not paid for during fiscal years 2026, 2025, and 2024 were \$820 million, \$525 million, and \$170 million, respectively.

	Jan 25, 2026	Jan 26, 2025
Accrued and Other Current Liabilities:		
	<i>(In millions)</i>	
Customer program accruals	\$ 5,318	\$ 4,880
Accrued purchase consideration	3,921	9
Product warranty	2,807	1,290
Excess inventory purchase obligations (1)	2,739	2,095
Taxes payable	2,669	881
Deferred revenue (2)	1,379	837
Accrued payroll and related expenses	1,146	848
Other	1,373	897
Total accrued and other current liabilities	\$ 21,352	\$ 11,737

(1) In fiscal years 2026 and 2025, we recorded an expense of approximately \$3.2 billion and \$2.0 billion, respectively, in cost of revenue.

(2) Includes customer advances and unearned revenue related to hardware and software support, cloud services, and license and development arrangements. The balance as of January 25, 2026 and January 26, 2025 included \$160 million and \$81 million of customer advances, respectively.

	Jan 25, 2026	Jan 26, 2025
Other Long-Term Liabilities:		
	<i>(In millions)</i>	
Income tax payable (1)	\$ 3,958	\$ 2,188
Deferred income tax	1,774	886
Deferred revenue (2)	1,193	976
Other	381	195
Total other long-term liabilities	\$ 7,306	\$ 4,245

(1) Primarily comprised of unrecognized tax benefits and related interest and penalties.

(2) Includes unearned revenue related to hardware and software support and cloud services.

Deferred Revenue

The following table shows the changes in short- and long-term deferred revenue during fiscal years 2026 and 2025:

	Jan 25, 2026	Jan 26, 2025
	<i>(In millions)</i>	
Balance at beginning of period	\$ 1,813	\$ 1,337
Deferred revenue additions (1)	11,137	5,083
Revenue recognized (2)	(10,378)	(4,607)
Balance at end of period	\$ 2,572	\$ 1,813

(1) Includes \$9.0 billion and \$3.6 billion of customer advances for fiscal years 2026 and 2025, respectively.

(2) Includes \$8.9 billion and \$3.7 billion related to customer advances for fiscal years 2026 and 2025, respectively.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

We recognized revenue of \$974 million and \$729 million in fiscal years 2026 and 2025, respectively, that were included in the prior year end deferred revenue balance.

As of January 25, 2026, revenue related to remaining performance obligations from contracts greater than one year in length was \$2.3 billion, which includes \$1.9 billion from deferred revenue and \$390 million which has not yet been billed nor recognized as revenue. Approximately 42% of revenue from contracts greater than one year in length will be recognized over the next twelve months.

Note 10 - Derivative Financial Instruments

Foreign Currency Derivatives

We utilize foreign currency forward contracts to mitigate the impact of foreign currency exchange rate movements on our operating expenses. The foreign currency forward contracts for operating expenses are designated as accounting hedges. Gains or losses on the contracts are recorded in accumulated other comprehensive income or loss and reclassified to operating expense when the related operating expenses are recognized in earnings. In fiscal years 2026 and 2025, the impact of foreign currency forward contracts designated as accounting hedges on other comprehensive income or loss was not significant and all such instruments were determined to be highly effective.

We also entered into foreign currency forward contracts mitigating the impact of foreign currency movements on monetary assets and liabilities. For our foreign currency contracts for assets and liabilities, the change in fair value of these non-designated contracts was recorded in other income or expense and offsets the change in fair value of the hedged foreign currency denominated monetary assets and liabilities, which was also recorded in other income or expense.

The table below presents the notional value of our foreign currency contracts outstanding:

	<u>Jan 25, 2026</u>		<u>Jan 26, 2025</u>
		<i>(In millions)</i>	
Designated as accounting hedges	\$	1,765	\$ 1,424
Not designated as accounting hedges	\$	2,332	\$ 1,297

The unrealized gains and losses or fair value of our foreign currency contracts were not significant as of January 25, 2026 and January 26, 2025.

As of January 25, 2026, all foreign currency contracts mature within 18 months. The expected realized gains and losses deferred into accumulated other comprehensive income or loss related to foreign currency forward contracts within the next twelve months were not significant.

Facility Lease Guarantees

In fiscal year 2026, we entered into agreements to guarantee partners' facility lease obligations in the event of their default in exchange for warrants. The maximum gross exposure under all agreements is \$3.5 billion, which is reduced as the partners make payments to the lessors over terms ranging from 5 to 7 years. The partners have placed \$712 million in escrow to mitigate our potential exposure. The guarantees, classified as credit derivatives with changes in fair value recognized in Other income and expense, were not material.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements

Total long-term portion			\$ 7,469	\$ 8,463

As of January 25, 2026 and January 26, 2025, the estimated fair value of debt was \$7.5 billion and \$7.2 billion, respectively. The estimated fair values are based on Level 2 inputs.

Our notes are unsecured senior obligations. Existing and future liabilities of our subsidiaries will be effectively senior to the notes. Our notes pay interest semi-annually. We may redeem each of our notes prior to maturity, subject to a make-whole premium. The maturity of the notes is calendar year.

As of January 25, 2026, we complied with the required covenants, which are non-financial in nature, under the outstanding notes.

In January 2026, we increased the size of our commercial paper program from \$575 million to \$25.0 billion. As of January 25, 2026, no commercial paper was outstanding.

Note 12 - Commitments and Contingencies
Commitments

Manufacturing, supply, and capacity commitments reflect datacenter-scale production and longer future ordering horizons across current and future product architectures. We enter into agreements with our supply vendors that allow them to procure inventory based upon our defined criteria, and in certain instances, these agreements are cancellable, able to be rescheduled, or adjustable for our business needs prior to placing firm orders. Changes to these agreements may result in additional costs. As of January 25, 2026, these commitments were \$95.2 billion, of which substantially all will be paid through fiscal year 2027.

Multi-year cloud service agreement commitments as of January 25, 2026, were \$27 billion, for which \$7 billion, \$6 billion, \$5 billion, \$5 billion, \$2 billion, and \$2 billion will be paid in fiscal years 2027, 2028, 2029, 2030, 2031, and 2032 and thereafter, respectively. Some cloud service capacity may be reduced, terminated or sold to others by the CSPs, in which case our commitments will be reduced. We expect cloud service agreements to be used to support our research and development efforts.

Investment commitments are \$11.4 billion as of January 25, 2026, subject to certain contingencies, of which we expect substantially all will be made through fiscal year 2027.

Other commitments were \$3.4 billion as of January 25, 2026, of which the majority will be paid through fiscal year 2027.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Accrual for Product Warranty Liabilities

The estimated amount of product warranty liabilities was \$2.8 billion and \$1.3 billion as of January 25, 2026 and January 26, 2025, respectively. The estimated product returns and product warranty activity consisted of the following:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Balance at beginning of period	\$ 1,290	\$ 306	\$ 82
Additions	2,474	1,203	278
Utilization	(957)	(219)	(54)
Balance at end of period	<u>\$ 2,807</u>	<u>\$ 1,290</u>	<u>\$ 306</u>

In fiscal years 2026, 2025, and 2024 the additions in product warranty liabilities primarily related to our Compute & Networking segment.

We have provided indemnities for matters such as tax, product, and employee liabilities. We have included intellectual property indemnification provisions in our technology-related agreements with third parties. Maximum potential future payments cannot be estimated because many of these agreements do not have a maximum stated liability. We have not recorded any liability in our Consolidated Financial Statements for such indemnifications.

Litigation

Securities Class Action and Derivative Lawsuits

The plaintiffs in the putative securities class action lawsuit, captioned 4:18-cv-07669-HSG, initially filed on December 21, 2018 in the United States District Court for the Northern District of California, and titled In Re NVIDIA Corporation Securities Litigation, filed an amended complaint on May 13, 2020. The amended complaint asserted that NVIDIA and certain NVIDIA executives violated Section 10(b) of the Securities Exchange Act of 1934, as amended, or the Exchange Act, and SEC Rule 10b-5, by making materially false or misleading statements related to channel inventory and the impact of cryptocurrency mining on GPU demand between May 10, 2017 and November 14, 2018. Plaintiffs also alleged that the NVIDIA executives who they named as defendants violated Section 20(a) of the Exchange Act. Plaintiffs sought class certification, an award of unspecified compensatory damages, an award of reasonable costs and expenses, including attorneys' fees and expert fees, and further relief as the Court may deem just and proper. On March 2, 2021, the district court granted NVIDIA's motion to dismiss the complaint without leave to amend, entered judgment in favor of NVIDIA and closed the case. On March 30, 2021, plaintiffs filed an appeal from judgment in the United States Court of Appeals for the Ninth Circuit, case number 21-15604. On August 25, 2023, a majority of a three-judge Ninth Circuit panel affirmed in part and reversed in part the district court's dismissal of the case, with a third judge dissenting on the basis that the district court did not err in dismissing the case. On November 15, 2023, the Ninth Circuit denied NVIDIA's petition for rehearing en banc of the Ninth Circuit panel's majority decision to reverse in part the dismissal of the case, which NVIDIA had filed on October 10, 2023. On December 5, 2023, the Ninth Circuit granted NVIDIA's motion to stay the mandate pending NVIDIA's petition for a writ of certiorari in the Supreme Court of the United States and the Supreme Court's final disposition of the matter. NVIDIA filed a petition for a writ of certiorari on March 4, 2024. On June 17, 2024, the Supreme Court of the United States granted NVIDIA's petition for a writ of certiorari. After briefing and argument, the Supreme Court dismissed NVIDIA's writ of certiorari as improvidently granted on December 11, 2024, and issued judgment on January 13, 2025. On February 20, 2025, the Ninth Circuit's judgment, entered August 25, 2023 and corrected August 28, 2023, took effect, and the case was remanded to the district court for further proceedings.

The putative derivative lawsuit pending in the United States District Court for the Northern District of California, captioned 4:19-cv-00341-HSG, initially filed January 18, 2019 and titled In re NVIDIA Corporation Consolidated Derivative Litigation, was stayed pending resolution of the plaintiffs' appeal in the In Re NVIDIA Corporation Securities Litigation action. On February 22, 2022, the court administratively closed the case, but stated that it would reopen the case once the appeal in the In Re NVIDIA Corporation Securities Litigation action is resolved. The case has not yet been reopened by the court. The lawsuit asserts claims, purportedly on behalf of us, against certain officers and directors of the Company for breach of fiduciary duty, unjust enrichment, waste of corporate assets, and violations of Sections 14(a), 10(b), and 20(a) of the Exchange Act based on the dissemination of allegedly false and misleading statements related to channel inventory and the impact of cryptocurrency mining on GPU demand. The plaintiffs are seeking unspecified damages and other relief, including reforms and improvements to NVIDIA's corporate governance and internal procedures.

The putative derivative actions initially filed September 24, 2019 and pending in the United States District Court for the District of Delaware, Lipchitz v. Huang, et al. (Case No. 1:19-cv-01795-MN) and Nelson v. Huang, et. al. (Case No. 1:19-cv-01798-MN), were stayed pending resolution of the plaintiffs' appeal in the In Re NVIDIA Corporation Securities

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Litigation action. On March 7, 2025, after the Supreme Court issued its judgment dismissing the Company's petition for writ of certiorari as improvidently granted in the In Re NVIDIA Securities Litigation action, the district court adopted the parties' stipulation to extend the stay until the final and complete resolution of the In Re NVIDIA Corporation Securities Litigation action. The lawsuits assert claims, purportedly on behalf of us, against certain officers and directors of the Company for breach of fiduciary duty, unjust enrichment, insider trading, misappropriation of information, corporate waste and violations of Sections 14(a), 10(b), and 20(a) of the Exchange Act based on the dissemination of allegedly false, and misleading statements related to channel inventory and the impact of cryptocurrency mining on GPU demand. The plaintiffs seek unspecified damages and other relief, including disgorgement of profits from the sale of NVIDIA stock and unspecified corporate governance measures.

Another putative derivative action was filed on October 30, 2023 in the Court of Chancery of the State of Delaware, captioned Horanic v. Huang, et al. (Case No. 2023-1096-KSJM). This lawsuit asserts claims, purportedly on behalf of us, against certain officers and directors of the Company for breach of fiduciary duty and insider trading based on the dissemination of allegedly false and misleading statements related to channel inventory and the impact of cryptocurrency mining on GPU demand. The plaintiffs seek unspecified damages and other relief, including disgorgement of profits from the sale of NVIDIA stock and reform of unspecified corporate governance measures. On August 11, 2025, the court granted the parties' stipulation to voluntarily dismiss with prejudice plaintiff City of Westland Police and Fire Retirement System. This derivative matter is stayed pending the final resolution of In Re NVIDIA Corporation Securities Litigation action.

Accounting for Loss Contingencies

As of January 25, 2026, there are no accrued contingent liabilities associated with the legal proceedings described above based on our belief that liabilities, while reasonably possible, are not probable. Further, any possible loss or range of loss in these matters cannot be reasonably estimated at this time. We are engaged in legal actions not described above arising in the ordinary course of business, as well as regulatory and government inquiries and investigations, and, while there can be no assurance of favorable outcomes, we believe that the ultimate outcome of these matters will not have a material adverse effect on our operating results, liquidity or financial position. These matters are subject to inherent uncertainties and if the ultimate outcome is unfavorable, there exists the possibility of a material adverse impact on our operating results, liquidity or financial position in the period the outcome becomes estimable and probable.

Note 13 - Income Taxes

The FASB issued a new accounting standard which includes new and updated income tax disclosures, including disaggregation of information in the rate reconciliation and income taxes paid, which we adopted on a prospective basis for the year ending January 25, 2026.

The Income tax expense applicable to income before income taxes consists of the following:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Current income taxes:			
Federal	\$ 19,039	\$ 14,032	\$ 5,710
State	1,218	892	335
Foreign	2,550	699	502
Total current	<u>22,807</u>	<u>15,623</u>	<u>6,547</u>
Deferred income taxes:			
Federal	(1,364)	(4,515)	(2,499)
State	(885)	(242)	(206)
Foreign	825	280	216
Total deferred	<u>(1,424)</u>	<u>(4,477)</u>	<u>(2,489)</u>
Income tax expense	<u>\$ 21,383</u>	<u>\$ 11,146</u>	<u>\$ 4,058</u>

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Income before income tax consists of the following:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
U.S.	\$ 123,181	\$ 77,456	\$ 29,495
Foreign	18,269	6,570	4,323
Income before income tax	<u>\$ 141,450</u>	<u>\$ 84,026</u>	<u>\$ 33,818</u>

The income tax expense (benefit) differs from the amount computed by applying the U.S. federal statutory rate of 21.0% to income before income taxes for the fiscal year ended January 25, 2026 as follows:

	Year Ended	
	Jan 25, 2026	
	<i>(In millions, except percentages)</i>	
US Federal Statutory Tax Rate	\$ 29,704	21.0 %
State and Local Income Taxes, Net of Federal Income Tax Effect (1)	258	0.2 %
Foreign tax effects		
Israel		
Reduced statutory tax rate on qualifying income	(3,064)	(2.2)%
Other	1,606	1.2 %
Other foreign jurisdictions	741	0.5 %
Effect of cross-border tax laws		
Foreign-derived deduction eligible income	(4,208)	(3.0)%
Other	(142)	(0.1)%
Tax credits	(1,933)	(1.4)%
Nontaxable or nondeductible items		
Stock-based compensation	(1,475)	(1.0)%
Other	29	— %
Other (2)	(133)	(0.1)%
Income tax expense	<u>\$ 21,383</u>	<u>15.1 %</u>

(1) State taxes in California, Tennessee, Arizona, and Illinois made up the majority of the tax effect in fiscal year 2026.

(2) Includes the tax effects of enactment of new tax laws, change in valuation allowance, and change in unrecognized tax benefits.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

The income tax expense (benefit) differs from the amount computed by applying the U.S. federal statutory rate of 21% to income before income taxes for fiscal years ended January 26, 2025 and January 28, 2024 as follows:

	Year Ended			
	Jan 26, 2025		Jan 28, 2024	
	<i>(In millions, except percentages)</i>			
Tax expense computed at federal statutory rate	\$ 17,645	21.0 %	\$ 7,102	21.0 %
Expense (benefit) resulting from:				
State income taxes, net of federal tax effect	554	0.7 %	120	0.4 %
Foreign-derived deduction eligible income	(2,976)	(3.5)%	(1,408)	(4.2)%
Stock-based compensation	(2,097)	(2.5)%	(741)	(2.2)%
U.S. federal research and development tax credit	(990)	(1.2)%	(431)	(1.3)%
Foreign tax rate differential	(984)	(1.2)%	(467)	(1.4)%
Other	(6)	—%	(117)	(0.3)%
Income tax expense	\$ 11,146	13.3 %	\$ 4,058	12.0 %

In July 2025, the OBBBA was enacted into law and contains several changes to key U.S. federal income tax laws. We have recognized the tax effects of currently effective OBBBA provisions in our results for fiscal year 2026.

The amount of cash paid for income taxes (net of refunds) for the fiscal year ended January 25, 2026 is as follows:

	Year Ended
	Jan 25, 2026
	<i>(In millions)</i>
Federal	\$ 16,755
State	
California	1,049
Other	1,041
Foreign	
Israel	1,287
Other	156
Total income taxes paid, net of refunds	\$ 20,288

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

The tax effect of temporary differences that gives rise to significant portions of the deferred tax assets and liabilities are presented below:

	Jan 25, 2026	Jan 26, 2025
	<i>(In millions)</i>	
Deferred tax assets:		
Capitalized research and development expenditure	\$ 5,436	\$ 6,256
Net controlled foreign corporation tested income deferred tax assets	5,389	2,820
Accruals and reserves, not currently deductible for tax purposes	3,644	2,058
Research and other tax credit carryforwards	718	759
Operating lease liabilities	554	299
Net operating loss and capital loss carryforwards	443	456
Other deferred tax assets	679	566
Gross deferred tax assets	16,863	13,214
Less valuation allowance	(768)	(1,610)
Total deferred tax assets	16,095	11,604
Deferred tax liabilities:		
Equity investments	(2,227)	(264)
Unremitted earnings of foreign subsidiaries	(1,813)	(891)
Operating lease assets	(533)	(286)
Acquired intangibles	(38)	(70)
Gross deferred tax liabilities	(4,611)	(1,511)
Net deferred tax asset (1)	\$ 11,484	\$ 10,093

(1) Net deferred tax asset includes long-term deferred tax assets of \$13.3 billion and \$11.0 billion and long-term deferred tax liabilities of \$1.8 billion and \$886 million for fiscal years 2026 and 2025, respectively. Long-term deferred tax liabilities are included in other long-term liabilities on our Consolidated Balance Sheets.

As of January 25, 2026, we intend to indefinitely reinvest approximately \$1.4 billion of cumulative undistributed earnings held by certain subsidiaries. We have not provided the amount of unrecognized deferred tax liabilities for temporary differences related to these investments as the determination of such amount is not practicable.

As of January 25, 2026 and January 26, 2025, we had a valuation allowance of \$768 million and \$1.6 billion, respectively, related to capital loss carryforwards, and certain other deferred tax assets that management determined are not likely to be realized due, in part, to jurisdictional projections of future taxable income, including capital gains. To the extent realization of the deferred tax assets becomes more-likely-than-not, we would recognize such deferred tax assets as income tax benefits during the period.

As of January 25, 2026, based on recent jurisdictional taxable income and expected future earnings, we concluded certain state deferred tax assets are more likely than not realizable and released \$711 million of valuation allowance.

As of January 25, 2026, we had U.S. federal, state and foreign net operating loss carryforwards of \$747 million, \$427 million and \$503 million, respectively. The federal and state carryforwards will begin to expire in fiscal year 2027. The foreign net operating loss carryforwards may be carried forward indefinitely. As of January 25, 2026, we had federal research tax credit carryforwards of \$56 million, before the impact of uncertain tax positions, that will begin to expire in fiscal year 2027. We have state research tax credit carryforwards of \$1.4 billion, before the impact of uncertain tax positions, of which \$1.3 billion is attributable to the State of California and may be carried over indefinitely and \$132 million is attributable to various other states and will begin to expire in fiscal year 2028. As of January 25, 2026, we had federal capital loss carryforwards of \$902 million that will begin to expire in fiscal year 2028.

Our tax attributes remain subject to audit and may be adjusted for changes or modification in tax laws, other authoritative interpretations thereof, or other facts and circumstances. Utilization of tax attributes may also be subject to limitations due to ownership changes and other limitations provided by the Internal Revenue Code and similar state and foreign tax provisions. If any such limitations apply, the tax attributes may expire or be denied before utilization.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

A reconciliation of gross unrecognized tax benefits is as follows:

	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Balance at beginning of period	\$ 2,861	\$ 1,670	\$ 1,238
Increases in tax positions for current year	1,959	1,268	616
Increases in tax positions for prior years	57	48	87
Lapse in statute of limitations	(224)	(27)	(19)
Decreases in tax positions for prior years	(157)	(88)	(148)
Settlements	(76)	(10)	(104)
Balance at end of period	<u>\$ 4,420</u>	<u>\$ 2,861</u>	<u>\$ 1,670</u>

Included in the balance of unrecognized tax benefits as of January 25, 2026 are \$3.7 billion of tax benefits that would affect our effective tax rate if recognized.

We classify an unrecognized tax benefit as a current liability, or amount refundable, to the extent that we anticipate payment or receipt of cash for income taxes within one year. The amount is classified as a long-term liability, or long-term amount refundable, if we anticipate payment or receipt of cash for income taxes during a period beyond a year.

We include interest and penalties related to unrecognized tax benefits as a component of income tax expense. We recognized net interest and penalties related to unrecognized tax benefits in the income tax expense line of our consolidated statements of income of \$103 million, \$92 million, and \$42 million during fiscal years 2026, 2025, and 2024, respectively. As of January 25, 2026 and January 26, 2025, we have accrued \$374 million and \$251 million, respectively, for the payment of interest and penalties related to unrecognized tax benefits, which is not included as a component of our gross unrecognized tax benefits.

We are subject to examination by taxing authorities both in the United States and other countries. As of January 25, 2026, the significant tax jurisdictions that may be subject to examination include the United States for fiscal years after 2022, as well as Canada, China, Germany, Hong Kong, India, Israel, Italy, and Taiwan for fiscal years 2014 through 2025. As of January 25, 2026, the significant tax jurisdictions for which we are currently under examination include the United States, Germany, Hong Kong, India, Israel, and Taiwan for fiscal years 2014 through 2025.

Note 14 - Shareholders' Equity

Capital Return Program

On August 26, 2025, our Board of Directors approved an additional \$60.0 billion in share repurchase authorization, without expiration. In fiscal years 2026 and 2025, we repurchased 282 million and 310 million shares of our common stock for \$40.4 billion and \$34.0 billion, respectively. As of January 25, 2026, we were authorized, subject to certain specifications, to repurchase up to \$58.5 billion of our common stock.

From January 26, 2026 through February 20, 2026, we repurchased 8 million shares for \$1.5 billion pursuant to a pre-established trading plan.

In fiscal years 2026, 2025, and 2024, we paid cash dividends to our shareholders of \$974 million, \$834 million, and \$395 million, respectively. The payment of future cash dividends is subject to our Board of Directors' continuing determination that the declaration of dividends is in the best interests of our shareholders.

Note 15 - Employee Retirement Plans

We provide tax-qualified defined contribution plans to eligible employees in the U.S. and certain other countries. Our contribution expense for fiscal years 2026, 2025, and 2024 was \$442 million, \$314 million, and \$255 million, respectively.

Note 16 - Segment Information

Our Chief Executive Officer is our chief operating decision maker, or CODM, and reviews financial information presented on an operating segment basis for purposes of making decisions and assessing financial performance. Our CODM assesses operating performance of each segment based on regularly provided segment revenue and segment operating income. Operating results by segment include costs or expenses directly attributable to each segment, and costs or expenses that are leveraged across our unified architecture and therefore allocated between our two segments. Our

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

CODM reviews expenses on a consolidated basis, and expenses attributable to each segment are not regularly provided to our CODM.

The Compute & Networking segment includes our Data Center accelerated computing and networking platforms and AI solutions and software, and Automotive platforms and autonomous and electric vehicle solutions including software.

The Graphics segment includes GeForce GPUs for gaming and PCs, and Quadro/NVIDIA RTX GPUs for enterprise workstation graphics.

Certain expenses are not allocated to either Compute & Networking or Graphics for purposes of making operating decisions or assessing financial performance. The expenses include stock-based compensation expense, corporate infrastructure and support costs, acquisition-related and other costs, and other non-recurring charges and benefits that our CODM deems to be enterprise in nature.

Our CODM does not review any information regarding total assets on a reportable segment basis. There are no intersegment transactions. The accounting policies for segment reporting are the same as for our consolidated financial statements. The table below presents details of our reportable segments.

	<u>Compute & Networking</u>	<u>Graphics</u>	<u>Total</u>
	<i>(In millions)</i>		
Year Ended Jan 25, 2026			
Revenue	\$ 193,479	\$ 22,459	\$ 215,938
Other segment items (1)	63,338	13,303	76,641
Operating income	\$ 130,141	\$ 9,156	\$ 139,297
Year Ended Jan 26, 2025			
Revenue	\$ 116,193	\$ 14,304	\$ 130,497
Other segment items (1)	33,318	9,219	42,537
Operating income	\$ 82,875	\$ 5,085	\$ 87,960
Year Ended Jan 28, 2024			
Revenue	\$ 47,405	\$ 13,517	\$ 60,922
Other segment items (1)	15,389	7,671	23,060
Operating income	\$ 32,016	\$ 5,846	\$ 37,862

(1) Other segment items primarily include product costs and inventory provisions, compensation and benefits excluding stock-based compensation expense, computing infrastructure expenses, and engineering development costs.

Depreciation and amortization expense attributable to our Compute & Networking segment for fiscal years 2026, 2025, and 2024 was \$1.6 billion, \$732 million, and \$457 million, respectively. Depreciation and amortization expense attributable to our Graphics segment for fiscal years 2026, 2025, and 2024 was \$590 million, \$372 million, and \$307 million, respectively. Acquisition-related intangible amortization expense is not allocated to either Compute & Networking or Graphics for purposes of making operating decisions or assessing financial performance.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements

A reconciliation of segment operating income to consolidated income before income tax for fiscal years 2026, 2025, and 2024 were as follows:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Segment operating income	\$ 139,297	\$ 87,960	\$ 37,862
Stock-based compensation expense	(6,386)	(4,737)	(3,549)
Unallocated operating expenses	(1,997)	(1,171)	(728)
Acquisition-related and other costs	(527)	(599)	(613)
Interest income	2,300	1,786	866
Interest expense	(259)	(247)	(257)
Other income, net	9,022	1,034	237
Consolidated income before income tax	<u>\$ 141,450</u>	<u>\$ 84,026</u>	<u>\$ 33,818</u>

Revenue by geographic area is based upon the location of the customers' headquarters. The end customer and shipping location may be different from our customers' headquarters location.

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Geographic Revenue based upon Customer Headquarters Location (1):			
United States	\$ 149,617	\$ 77,482	\$ 31,533
Taiwan (2)	42,345	23,600	14,912
China (including Hong Kong)	19,677	25,048	12,330
Other	4,299	4,367	2,147
Total revenue	<u>\$ 215,938</u>	<u>\$ 130,497</u>	<u>\$ 60,922</u>

(1) In the third quarter of fiscal year 2026, we changed to revenue based upon the location of our customers' headquarters as we believe it provides a better representation of the geographic profile of our revenue. Prior period information has been recast to reflect this change.

(2) In fiscal year 2026, we estimate 76% of Data Center revenue from Taiwan-headquartered customers was attributed to end customers based in the United States and Europe.

Revenue from sales to customers headquartered outside of the United States accounted for 31%, 41%, and 48% of total revenue for fiscal years 2026, 2025, and 2024, respectively. The increase in revenue to the United States for fiscal years 2026 and 2025 was primarily due to higher U.S.-based Compute & Networking segment demand.

We refer to customers who purchase products directly from NVIDIA as direct customers, such as AIBs, distributors, ODMs, OEMs, CSPs, AI model makers, and system integrators. Certain direct customers may use either internal resources or third-party system integrators to complete their build. We refer to indirect customers as those who purchase products through our direct customers; indirect customers include CSPs, Neocloud builders, AI model makers, enterprises, and public sector entities. Our revenue is concentrated among a limited number of direct and indirect customers and this trend may continue.

Direct Customers – For fiscal year 2026, sales to one direct customer represented 22% of total revenue and sales to another direct customer represented 14% of total revenue, all of which were primarily attributable to the Compute & Networking segment.

For fiscal year 2025, sales to one direct customer represented 12% of total revenue and sales to two direct customers each represented 11% of total revenue, all of which were primarily attributable to the Compute & Networking segment.

For fiscal year 2024, sales to one direct customer represented 13% of total revenue, and were primarily attributable to the Compute & Networking segment.

The following table summarizes revenue by specialized markets:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
Revenue by End Market:			
	<i>(In millions)</i>		
Data Center	\$ 193,737	\$ 115,186	\$ 47,525
Compute	162,361	102,196	38,950
Networking	31,376	12,990	8,575
Gaming	16,042	11,350	10,447
Professional Visualization	3,191	1,878	1,553
Automotive	2,349	1,694	1,091
OEM and Other	619	389	306
Total revenue	<u>\$ 215,938</u>	<u>\$ 130,497</u>	<u>\$ 60,922</u>

The following table presents summarized information for long-lived assets by country. Long-lived assets consist of property and equipment and exclude other assets, operating lease assets, goodwill, and intangible assets.

	Jan 25, 2026	Jan 26, 2025
<i>(In millions)</i>		
United States	\$ 5,125	\$ 3,626
Taiwan	3,219	1,481
Israel	1,471	840
Other	568	336
Total long-lived assets	<u>\$ 10,383</u>	<u>\$ 6,283</u>

Note 17 - Leases

Our lease obligations primarily consist of operating leases for our offices and data centers, with lease periods expiring between fiscal years 2027 and 2041.

Future minimum lease obligations under our non-cancelable lease agreements as of January 25, 2026 were as follows:

	Operating Lease Obligations
	<i>(In millions)</i>
Fiscal Year:	
2027	\$ 493
2028	485
2029	457
2030	381
2031	314
2032 and thereafter	1,494
Total	3,624
Less imputed interest	680
Present value of net future minimum lease payments	2,944
Less short-term operating lease liabilities	372
Long-term operating lease liabilities	<u>\$ 2,572</u>

Between fiscal years 2027 and 2030, we expect to commence leases with future obligations of \$22.7 billion, primarily data center leases to support our research and development efforts, with lease terms of 1.8 to 20 years.

NVIDIA Corporation and Subsidiaries
Notes to the Consolidated Financial Statements
(Continued)

Operating lease costs for fiscal years 2026, 2025, and 2024 were \$462 million, \$356 million, and \$269 million, respectively. Short-term and variable lease costs for fiscal years 2026, 2025, and 2024 were not significant.

Other information related to leases was as follows:

	Year Ended		
	Jan 25, 2026	Jan 26, 2025	Jan 28, 2024
	<i>(In millions)</i>		
Supplemental cash flows information			
Operating cash flow used for operating leases	\$ 428	\$ 313	\$ 286
Operating lease assets obtained in exchange for lease obligations	\$ 1,439	\$ 877	\$ 531

As of January 25, 2026, our operating leases have a weighted average remaining lease term of 8.8 years and a weighted average discount rate of 4.38%. As of January 26, 2025, our operating leases had a weighted average remaining lease term of 6.5 years and a weighted average discount rate of 4.16%.

NVIDIA Corporation and Subsidiaries
Schedule II – Valuation and Qualifying Accounts

Description	Balance at Beginning of Period	Additions	Deductions	Balance at End of Period
<i>(In millions)</i>				
Fiscal year 2026				
Allowance for doubtful accounts	\$ 4	\$ — (1)	\$ — (1)	\$ 4
Sales return allowance	\$ 82	\$ 188 (2)	\$ (100) (4)	\$ 170
Deferred tax valuation allowance	\$ 1,610	\$ 31 (3)	\$ (873) (3)	\$ 768
Fiscal year 2025				
Allowance for doubtful accounts	\$ 4	\$ — (1)	\$ — (1)	\$ 4
Sales return allowance	\$ 109	\$ 151 (2)	\$ (178) (4)	\$ 82
Deferred tax valuation allowance	\$ 1,552	\$ 58 (3)	\$ — (3)	\$ 1,610
Fiscal year 2024				
Allowance for doubtful accounts	\$ 4	\$ — (1)	\$ — (1)	\$ 4
Sales return allowance	\$ 26	\$ 213 (2)	\$ (130) (4)	\$ 109
Deferred tax valuation allowance	\$ 1,484	\$ 162 (3)	\$ (94) (3)	\$ 1,552

(1) Additions represent either expense or acquired balances and deductions represent write-offs.

(2) Additions represent estimated product returns charged as a reduction to revenue or an acquired balance.

(3) Additional valuation allowance on deferred tax assets not likely to be realized. Additions represent additional valuation allowance on certain state and other deferred tax assets. Deductions mainly represent the release of valuation allowance on certain state deferred tax assets. Refer to Note 13 of the Notes to the Consolidated Financial Statements in Part IV, Item 15 of this Annual Report on Form 10-K for additional information.

(4) Represents sales returns.
